

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

Sewed, 1s. 3d.; limp cloth, 1s. 5d. Book II. Sewed, 1s. 3d.; limp cloth, 1s. 5d. Book III. Sewed, 1s. 3d.; limp cloth, 1s. 5d. Book IV. Sewed, 1s. 3d.; limp cloth, 1s. 5d. Book V. Sewed, 1s. 3d.; limp cloth, 1s. 5d.

Classical Gold In English Renderings.

Chosen by RICHARD LAWSON, M.A., Lecturer in Method of Language Teaching for the Diploma of Education in the University of Melbourne. With an Introduction by FRANK TATE, C.M.G., I.S.O., M.A. Limp cloth, 3s.

Education.—"It is claimed for this book that it is probably the first of its kind. It aims at preserving in our schools, by means of translations, some intimate acquaintance with Greek and Roman life and literature. . . . Mr. Lawson has accomplished a valuable piece of work, and we hope that he will give us another and similar volume before long."

British History Chronologically Arranged. Part I, 55 B.C.—A.D. 1914. Part II, 1915–1919. By ARTHUR HASSALL, M.A., Student and Tutor of Christ Church, Oxford. 20s. net.

W. & A. K. JOHNSTON'S PUBLICATIONS.

The Book that EXPLAINS the New Map of Europe.

Aftermath: A Geographical Study of the Peace Terms. By M. I. NEWBIGIN, D.Sc. Illustrated with 15 Maps. 5s. net. Cheap Edition, 3s. 6d. net.

This book is exactly what is required by Geography Teachers and all those interested in international relations, who wish to understand the many changes made since the War in the Map of Europe and of the World—why they were made, and what is likely to result from them. Dr. Newbigin is a recognized authority on Geographical subjects.

Second Edition, Revised and Largely Rewritten.

Ordnance Survey Maps: Their Meaning and Use. By M. I. NEWBIGIN, D.Sc. 2s. net.

Reviewing the First Edition, the *Educational News* said: "For such a volume as this, teachers have waited long. Miss Newbigin shows teachers and students alike what they may learn from these Maps, and makes many extremely useful observations on their educational purpose."

The Edina Histories. In Six Books. By A. I. WESTLAKE, B.A., and T. FRANKLIN. Illustrated with Maps. 1s. 4d. net each.

The Journal of Education.—"These little books represent a marked advance in historical primers for elementary schools."

* * Macmillan's New Catalogue of Books suitable for Presentation post free on application.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C. 2.

LIFE AND WORK SERIES.

A Brief Sketch of Social and Industrial History. By EDWARD CRESSY, Author of "An Outline of Industrial History." Illustrated. 3s. 6d.

The Teacher's World.—"We recommend it confidently to the notice of teachers in continuation and central schools, believing they will find in it a valuable help."

The Progress to Geography. A New Series of Geographical Reading Books arranged on the Concentric System, and emphasising the Racial Aspect of Modern Geography. Fully and beautifully illustrated in Colour and Black and White. Edited by RICHARD WILSON, D.Lit.

STAGE.

I. "Pictures and Conversations." 2s. 6d.

II. More "Pictures and Conversations." 3s.

III. Myself and My Country. 3s. 6d.

IV. The British World. 4s.

The Times Educational Supplement.—"These charming little books (Stages I and II) are written in language simple enough for children of seven upwards to read for themselves. . . . The coloured plates, especially in the first volume, are delightful. Many of Stevenson's and Hilaire Belloc's child-poems are included."

First Lessons in Geography. By E. MARSDEN, B.A., F.R.H.S., &c., and T. ALFORD SMITH, B.A., F.R.G.S. With Maps and Illustrations. 3s. 6d.

Commercial Arithmetic and Accounts (in Three Parts).

By H. H. GREEN, B.Sc., Secondary School Lecturer in Commercial Arithmetic, East Ham Technical College, and THOMAS FRANKLIN, late Lecturer in Book-keeping and other Commercial Subjects, London County Council. Parts I–III, 2s. each. Complete, 6s.

The Chamber of Commerce Journal.—"This useful work. The book, which is divided into three parts, will be found of value, not only by private students, but also by all central and secondary schools which have a commercial basis."

Natural History Pictures (Fauna).

Drawn by J. ANDREW TAYLOR, M.Sc., I.E.S. 22×15 inches. Single Pictures, 1s. 6d. each. The set, mounted on lath, with hanger, 7s. 6d. (1) Cobra, (2) Jackal, (3) Black or King Vulture, (4) Fish, (5) Spider, (6) Bat. Teacher's Handbook to the above, sewed, 1s. 6d.

Historical Geography of Britain and the British Empire.

By T. FRANKLIN. Book I, The Making of England; The Making of Empire; The Establishment of Empire. B.C. 55 to 1815. Book II, The Expansion and Consolidation of the British Empire. 1800 to the Present Day. 2s. net each book.

The Times Educational Supplement.—"Careful, well balanced, and attractive."

Multum in Parvo Atlas of the World.

New Edition with Peace Treaty boundaries. Containing more than 100 Maps and Plans and full Geographical Index. 3s. 9d. net.

World-wide Atlas. New (Peace Terms) Edition.

128 pages of Maps and full Geographical Index. 15s. net. Very suitable for School Libraries.

"O.R.E." Atlas. Part I, British Isles, Part II, Europe. 1s. 6d. net each.

The first two parts of a new Orographical, Regional, and Economic Atlas, making available for schools just the maps actually required for the region under study without purchasing a complete atlas.

PHYSICAL TRAINING COLLEGE, Kingsfield, Dartford Heath, Kent, and the BERGMAN OSTERBERG UNION OF TRAINED GYM-NASTIC TEACHERS.

See advertisement on page 3.

MISS DYMPHNA SMITH'S
EDUCATIONAL DEPARTMENT, 231 EBURY STREET, S.W.1.—Principals needing good ASSISTANT MISTRESSES, now or in the future, should apply The REGISTRAR, as above. Private Governesses also supplied. (Miss Dymphna Smith interviews applicants personally, 11 to 1, or by appointment.)

Continental Schools

COLLEGE DE CANNES,
FRANCE (High School for Boys). Fine building: every comfort. Private rooms. Special arrangement for foreigners wishing to speak French fluently. £21. 8s. a term.

Éducation Française.

DANS très bel immeuble, bien organisé, très bien situé, on reçoit Jeunes Filles pour achever éducation française. Cours faits par Professeurs de l'Etat; régime choisi. Ville située sur grande ligne, Paris-Bordeaux, proximité Royan et plages océan Côte d'Argent. S'adresser pour tous renseignements à Madame LA DIRECTRICE DE L'ÉCOLE PRIMAIRE SUPÉRIEURE DE JEUNES FILLES DE PONS (Charente Inférieure), France.

Speech Training and Elocution.

MISS LAURA SMITHSON,

L.R.A.M. Elocution A., Director of Stratford-on-Avon Shakespeare Festival Summer School of Education. Recommended by Sir Frank Benson, Miss Lillian Baylis, Ben Greet, Esq., William Poel, Esq. Elocution, Voice Production and Dramatic Training. Pupils prepare for L.R.A.M. Elocution Diploma. Schools near London visited. Stammering and other defects of Speech treated. Address—109 Abbey Road Mansions, N.W.8. North Country towns, including Newcastle-on-Tyne (Conservatoire of Music) visited weekly by Miss IVY SMITHSON.

L.R.A.M. and A.R.C.M. Teaching
Singing Exams. Special Correspondence Course and personal tuition. Complete preparation. Pupil writes: "Your Course is excellent, and my singing work has greatly improved, thanks to your tuition.—A. F."—Mr. W. LEE WEBSTER, L.R.A.M., A.R.C.M. (Teaching Singing), 22 Lucknow Avenue, Nottingham.

The Revised Scale for Posts
Wanted or Vacant will be
found on page 27.

SCHOLASTIC APPOINTMENTS

University men and women seeking scholastic appointments should apply to

Truman & Knightley SCHOLASTIC AGENTS LTD

who introduce ASSISTANT MASTERS AND MISTRESSES to the majority of the leading Public and Private Schools at home and abroad.

Through this Agency, well educated gentlewomen with Higher Local and other good Certificates, interested in children and in teaching, can find congenial work in good high-class Private Schools, where the hours are not excessive, conditions are pleasant, and the holidays long. Salaries range from £60 to £120 or more per annum, with board and residence, according to age, qualifications, and experience. There are also many vacancies for Student Teachers, Junior Mistresses, and House Governesses or Duty Mistresses at salaries of from £30 to £60 per annum with board and residence.

There is a separate department for
LADY MATRONS and HOUSEKEEPERS
for schools.

No charge for registration.

::

Moderate commission.

SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

Offices: 158-162 OXFORD ST., LONDON, W.1

Telegrams: "TUTORESS, PHONE, LONDON."

Telephone: MUSEUM 1136.

TEXT-BOOKS FOR JUNIOR AND SENIOR FORMS

PUBLISHED AT THE

University Tutorial Press.

ENGLISH, FRENCH, LATIN.

English Grammar, Junior. With Parsing and Analysis. By A. M. WALMSLEY, M.A. *Second Edition.* 2s.
"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association.*

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 2s.
"Makes plain for the young pupil the essentials of good writing."—*Education.*

English Composition, Senior Course of. By E. W. EDMUNDS, M.A., B.Sc. *Second Edition.* 3s. 6d.
"Excellent devised and arranged."—*School World.*

English Course, The Matriculation. By W. H. LOW, M.A., and JOHN BRIGGS, M.A. *Third Edition.* 4s. 6d.
"Admirably fulfils its purpose. The chapters on précis-writing and indexing are excellent."—*Westminster Review.*

English Verse, An Anthology of. For use in Schools and Colleges. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. 3s. 6d.
"A charming and truly representative collection."—*Guardian.*

English Prose, An Anthology of. For use in Schools and Colleges. By S. E. GOGGIN, M.A., and A. R. WEEKES, M.A. 3s. 6d.
"The choice of writers could not well be bettered."—*Saturday Review.*

English Literature, The Tutorial History of. By A. J. WYATT, M.A. *Third Edition,* continued to the present time. 3s. 6d.
"It is well written, well informed, and accurate."—*The Journal of Education.*

English Literature of the Nineteenth Century. By HENRY CLAY, M.A., and A. J. WYATT, M.A. 2s. 9d.
"A piece of sound and sympathetic scholarship."—*Athenæum.*

French Course, New Junior. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 3s. 6d.
"The book becomes a serious rival to those existing."—*Schoolmaster.*

French Course, Senior. By Professor WEEKLEY, M.A., and CLAUDE GILLI, B.A. 4s. 6d.
"A model of clearness and simplicity."—*The Journal of Education.*

French Course, Direct. By H. J. CHAYTOR, M.A., Head Master of Plymouth College. Illustrated. 2s. With Vocabulary (French-English). 2s. 9d. Vocabulary (separately). 10d. net.
"Mr. Chaytor is a teacher of experience, and his book does him credit."—*School World.*

French Composition, Groundwork of. By Professor ERNEST WEEKLEY, M.A. 2s. 9d.
"The author's works have done much to raise the standard in French scholarship throughout the country."—*Secondary School Journal.*

French Essays, Matriculation. (Free Composition.) By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. 2s.
"A serviceable and well-graded book."—*School World.*

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s. 9d.
"The co-operation of a French and an English editor has produced the happiest results."—*The Journal of Education.*

French Reader, Senior. With Introduction, Notes, and Vocabulary. By R. F. JAMES, B.A. 3s. 6d.
"This is a splendid reader."—*Schoolmaster.*

Latin Course, New Junior. By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 4s. 6d.
"A very successful compromise between the old and the new methods."—*Journal of the Assistant Masters' Association.*

Latin Course, Senior. By A. J. F. COLLINS, M.A., and ALFRED ROBINSON, B.A. 4s. 6d.
"The book is business-like and well arranged."—*Guardian.*

Latin Authors, Selections from. Senior Edition. By A. F. WATT, M.A., and B. J. HAYES, M.A. *Third Edition.* 3s. 6d.
"It is quite an interesting selection, and well done."—*School World.*

Latin Reader, New Junior. By A. J. TATE, M.A. 2s. 9d.
"Mr. Tate has shown great judgment in the extracts he has chosen."—*Bookseller.*

GEOGRAPHY AND HISTORY.

Geography, Junior. By G. C. FRY, M.Sc. 3s. 6d.
"A concise book of geography on modern lines. The diagrams are bold and convey definite visual instruction directly illustrating the text."—*Education.*

Geography, Textbook of. By G. C. FRY, M.Sc. *Second Edition, Revised and Enlarged.* 5s. 6d.
"A capital exposition of the modern methods of treating geography."—*Teacher's World.*

Geography of Europe, Senior. Being the Geography of Europe, including the British Isles, with chapters on Physical Geography. By G. C. FRY, M.Sc. Adapted from the *Textbook of Geography.* 3s. 6d.
"Mr. Fry brings out the fascination of the broad view of geography."—*Literary World.*

Physical Geography, Principles of. Adapted from the Physical section of the *Textbook of Geography.* By G. C. FRY, M.Sc. 2s.
"In this thoroughly serviceable volume Mr. Fry prepares the way clearly and fully for the study of economic and regional geography."—*Educational News.*

Government of the United Kingdom, its Colonies and Dependencies. By A. E. HOGAN, LL.D., B.A. *Third Edition, Revised and Enlarged.* 3s. 6d.
An elementary account of the British Constitution suitable for upper schools.
"The account of the present-day institutions of the British Empire is good and clear."—*School World.*

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 4s. 6d. Also in three parts as follows:—I, to 1603; II, 1485-1714; III, 1660-1910. 2s. each.
"Very careful judgment has been exercised in the selection of the matter, and a proper perspective maintained."—*Educational Times.*

English History, Groundwork of. By M. E. CARTER, Honour School of Modern History, Oxford. 2s. 9d.
"A very readable outline of the salient facts of English History. The material is well arranged and the language is simple."—*Educational News.*

Matriculation Modern History: History of England, 1485-1901, with some reference to the Contemporary History of Europe and Colonial Developments. By C. S. FEARENSIDE, M.A. *Second Edition.* With Biographies. 5s. 6d.
"An excellent manual. The international history, specially in the eighteenth century, where most textbooks fail, is very carefully treated."—*School World.*

Social History of England, A. By FREDERICK BRADSHAW, D.Sc., M.A. 5s.
An elementary account, suitable for use in the upper forms in schools, of the social and economic development of England.
"An exceedingly interesting and valuable little book . . . a book of high authority and serviceableness."—*The Journal of Education.*

Rome, History of: The Tutorial, to 37 A.D. By A. H. ALLCROFT, M.A., and W. F. MASON, *Fourth Edition, Revised and in Part Rewritten* by J. F. STOUT, B.A. 4s. 6d.
"An accurate and capable manual for students."—*Speaker.*

Greece, History of: The Tutorial. By W. J. WOODHOUSE, M.A., Professor of Greek in the University of Sydney. 5s. 6d.
"The outcome of wide reading, high scholarship, and much original thought."—*Westminster Review.*

OCCASIONAL NOTES.

NO sooner have Alcock and Brown successfully finished their demonstration that the Atlantic can be crossed in sixteen hours, than the Australian brothers Smith proceeded a step further in the annihilation of distance, and fly to Australia in one month. That they have secured the handsome solatium of £10,000 from an admiring and grateful Commonwealth is a secondary matter. Where will it all end? If a couple of men in one machine do the journey from Hounslow to Port Darwin in twenty-eight days, how quickly can it be done, say, by relays of men and machines, when much of the tremendous strain on nerve and engine will have been removed? Reckoning such relays as capable of maintaining a steady "jog-trot" of 100 miles an hour, all told, it should work out at about five days. And we may confidently predict that we shall not have long to wait for this logical conclusion either. Jules Verne's "Round the World in Eighty Days," which thrilled us in our boyhood, leaves our modern youth quite cold. The route was well planned, and the distance over water reduced to a minimum. From Hounslow the pioneers traversed Europe via Lyons, Rome, and Naples, touched Africa at Cairo, and then attacked Asia by way of Damascus, Bagdad, Basra, Karachi, Delhi, Calcutta, Rangoon, Bangkok, Singapore, and the Southern Dutch Indies, crossing that pet of the geography examiner "Wallace's Line" between Bali and Lombok. Save for the thrust south to Cairo the journey could not well have been shortened. It was accomplished in all sorts of adverse weather—snow, fog, rain, intense cold (the air-men's food, we are told, was once frozen so hard as to be inedible), and intense heat. We may hazard a guess as to

the first long distance commercial air routes to be established in the near future. Probably they will be England to Egypt, Egypt (i) to S. Africa, (ii) to India and thence to Australia. The King's cable was correct, "Your success will bring Australia nearer to the Mother-country"—literally no less than metaphorically.

THE attempt to bring about an understanding between teachers and education authorities without resort to a strike is a statesmanlike action on the part of Mr. Fisher. In the case of assistant teachers it is arguable that a scale with an irreducible minimum, to be modified eventually to suit the circumstances of the locality and the nature of the work, is the best method. But, having regard to the variable nature of the responsibilities imposed upon head teachers, it is by no means universally agreed that a scale is a fair means for them. From this point of view a mistake was made in asking the National Union of Teachers to supply the whole of the teacher side of the Standing Committee. The members of the Executive of the Union are elected by a mixed constituency in which the assistant teachers in most districts greatly outnumber the heads. Consequently none of the Executive can speak as head teachers only, since they are obliged to have regard to the wishes of this majority in their constituencies. Some seats might have been allotted to members of the Council of the National Association of Head Teachers, and of the Class Teachers' Federation, as was done when the Registration Council was formed. It is to be hoped that it is not yet too late for this grievance to be remedied. Possibly this mistake has made it easier to commit the blunder of basing the minimum initial salary of a head teacher upon his previous salary as assistant.

THE Committee is another proof of Mr. Fisher's desire to raise the status of the teacher's calling. The effect of the Minister's special grant for improving salaries was unfortunately nullified by the abnormal rise in prices. But the new salaries will keep up when prices go down, and this improvement, added to the generous superannuation scheme now in force, should bring many candidates into the profession. There is perhaps a danger that the security of a scale and a pension may mainly attract mediocrity, and that the abolition of "plums" may warn off many ambitious men. To the poorly paid teacher the report should be welcome. The effect on the position of the village teacher capable of rising to the situation should be revolutionary, and he should become a real power in rural life, as strong as the clergyman has been. This possibility makes it incumbent upon those to whom the selection of candidates is entrusted to see that only promising material is accepted. The carry-over part of the scheme, including its recognition of past service wherever rendered, is a cheering feature. It does not give absolute and immediate justice, but it goes as far and as fast as public opinion will allow. In one particular it gives less than justice. It makes no satisfactory provision for teachers over sixty, the amount of whose pension depends upon what they are allowed to receive at once, and who cannot afford to wait for three annual increments. It is to be hoped that education authorities will deal with them more kindly than the scheme suggests.

EVEN schoolmasters are being moved by the spirit of the age. Such, at least, appears to be the conclusion to be drawn from the attitude adopted by the

**Whitley Councils
for Teachers.**

Incorporated Association of Assistant Masters in Secondary Schools towards the question of Whitley Councils for Teachers. The I.A.A.M. pins its faith to the Teachers Registration Council as the interpreter of the mind of the teaching profession. This Council, it is true, was not founded to serve the ends of a Whitley Council, but those who worked for its establishment have always retained the larger hope that it might some day develop into a body which would harmonize the sectional interests of teachers and be qualified to speak for a united profession. Basing its attitude on some such hope, the I.A.A.M. urges teachers, when they meet in joint council, to speak with a united voice alike in the national field through the medium of an enlarged T.R.C. and in every local area. In the latter case, if no such focus of the separate parts of the profession is to be found already, the Association suggests that teachers should band themselves in a body representative of the various interests as expressed through separate organizations. Under such a system, the teacher, if not exactly master of his fate, would, at any rate, be in the position to influence his fate through the activities of his representatives on these joint bodies.

IF this is the aim, what is to be the effect of this policy? Primarily, teachers would seek to secure conditions of service more satisfactory to themselves.

**Their probable
Effect.**

This gained, a greater measure of efficiency would probably result; for insistence cannot be too often laid on the fact that discontented service commonly leads to inefficient service. There are two main causes for the present discontent: the denial of the means necessary for the generous life which the teacher's intellectual training has fitted him to enjoy, and the constraint often placed upon him by regulations unsympathetically administered from above. The policy urged by the I.A.A.M. would, it is thought, lead to improvement in both directions, and, by making the teacher's life fuller and more secure, tend to improve the quality of his work. Moreover, the community would gain. District and National Councils would both offer a means for bringing into prominence proposals for the improvement of our educational machinery, or for the initiation of educational experiments. Such questions would be discussed in a sympathetic atmosphere, and the decisions arrived at would carry such weight that they would not be disregarded lightly by those with whom the final decision must lie.

THE Prime Minister—whatever his faults—does not believe in half measures, and in appointing a committee to inquire into the position to be assigned to the

**The Prime
Minister's
Committee
on Classics.**

Classics in education, he has taken a step which ought to prove as effective in educational reconstruction as his call for the appointment of Marshal Foch as sole Commander-in-Chief was effective in the successful waging of the Great War. He has seen at once that little is likely to come out of all the present discussion of reconstruction in education until we get down to fundamentals. The classics have been

enshrined in a special position in our public schools for generations. So we are to have a committee to inquire into their claims to hold that position. Its terms of reference are wide: "to inquire into the position to be assigned to the classics (i.e. to the language, literature, and history of Ancient Greece and Rome) in the educational system of the United Kingdom, and to advise as to the means by which the proper study of these subjects may be maintained and improved." The last clause seems to have been worded in order to elicit some official pronouncement upon the merits of the Direct Method—a conjecture which is confirmed by the inclusion in the committee of Mr. S. O. Andrew, head master of the Whitgift Grammar School, Croydon—and classical teachers throughout the country will await such declaration with interest. That the committee will not be inimical to the classics is sufficiently clear from its constitution—it includes men like Profs. Murray, Burnet, Rhys Roberts, and other well-known friends of classical education. We shall all await its recommendations with interest.

THE final report of the Adult Education Committee, with which we deal more fully elsewhere, contains much useful information and many interesting sugges-

**Adult
Education.**

tions. If we do not entirely share the Master of Balliol's comprehensive aspirations and sanguine anticipations, it is not because we do not desire, in his words, "the extension of true education into adult life." Except in the broad sense that whatever the individual sees or learns or does is educational, we are inclined to doubt whether it is wise to assume that to provide adults with the means of acquiring information will render them educated. That, by any process of tutorial or other classes, we can hope to develop "an open habit of mind, clear-sighted and truth-loving, proof against sophisms, shibboleths, claptrap phrases, and cant," is a consummation devoutly to be wished, no doubt, but, we fear, illusory. Let us by all means popularize information and useful facts about such questions as the Empire, the relation between capital and labour, the relation between science and production, but do not let us expect too much of the enterprise.

THE problem of the education of the labour leader especially is difficult to solve. If the son of the

**Labour and
Education.**

manual worker pursues the rather narrow, well defined educational track through the secondary school and the university institution, the result will not be a manual worker; he will pursue probably any occupation or employment except that of organizing or leading labour. The new high road represented by adult classes, or even a session at a labour college, is not a satisfactory alternative to the well defined, though rather narrow, way; but at present there appears to be little choice. The workers, Mr. A. L. Smith says, demand industrial control on the ground that industrial democracy is as essential to individual freedom as political democracy. The country was warned, many years ago, to educate its masters—politics, rather than industry, being in the mind of the advocate. But we have yet to discover the educational process appropriate for a democracy exercising political and industrial "control," and obliged by economic conditions to live by manual labour.

THE Lancashire County Teachers' Association recently unanimously approved a resolution strongly deprecating the action of the Lancashire and other Education Committees in establishing and maintaining preparatory departments to secondary schools. Admitting that the intellectual standard of elementary schools is higher in the northern half of England than in the southern, and that there is more infinite capacity for taking pains in Lancashire than in the home counties, one still wonders whether the Lancashire County Teachers' Association was wise when it deprecated the establishment and maintenance of preparatory departments to secondary schools. Surely the Association is wrong when it resolves that the instruction given in the preparatory departments of secondary schools is of a standard similar to that given in the ordinary classes of a primary school. The plan of work for a child leaving school at about fourteen can not, and should not, be designed on the same lines as the plan of work prepared for a pupil due to continue his school career till the age of sixteen at least. It must differ in subjects, standard, and character. Children brought up under the two systems differ in outlook, in mentality, and in their power of grappling with a difficulty.

DURING the last few years there has been held in a suburb of London annually a competition for free-place candidates from elementary schools, covering a population of about 130,000. In the case of the boys, the applicants put forward by the elementary schools are reduced in number to about fifty by a preliminary examination. From these fifty protagonists about twenty are picked, by means of an oral examination, to hold free places in secondary schools. The state of these boys' attainments can be judged by notes made last April by an examiner. It should be stated that all the competitors lived within five miles of Charing Cross and were not children from the slums. Their ages would be twelve or slightly under. Few had heard of Rudyard Kipling, or could say what was meant by a syllable (in verse) or an adverb. Hardly any had seen, to their knowledge, Westminster Abbey, the Academy, or St. Paul's. Next to no one could multiply 0.1×0.1 , or $\frac{1}{2} \times \frac{3}{4} \times \frac{2}{3}$, or distinguish between ab and $a+b$. It was almost impossible to find a candidate who admitted a knowledge of any play of Shakespeare or of any piece of poetry, or of a work by a standard author. Of course, they had little knowledge of French or geometry. No doubt the standard of attainments differs from place to place; but is it fair to the nation to say that no other access to secondary schools shall be permitted to children up to the age of about twelve than the channels which give passage only to such vessels as carry the mental cargoes indicated in the foregoing bill of lading?

THE circular informing local education authorities that the Minister of Health has agreed to exercise his discretion, and make arrangements with the Board of Education respecting the supervision of schemes for school medical services, confirms a decision that was anticipated. The departments, it is said, are actuated by the desire that there shall be a comprehensive, consistent, and progressive policy for promoting the health and physical

welfare of children and young persons, and that this policy shall be reflected in the administration of the departments, so as to facilitate to the utmost extent the development of health services by local authorities, whether under the Education Acts, the Public Health Acts, the Maternity and Child Welfare Act, or otherwise. It is to be assumed, we hope, that local authorities generally will be able to make satisfactory arrangements for the school medical service to be effectively administered with due regard both to the interests of education and to other measures adopted for the promotion of public health.

EVIDENTLY the Liverpool Education Committee is of Shakespeare's opinion that sleep is the chief nourisher at life's feast, and they have circularized the parents of elementary-school children, pointing out the evils of late hours and insufficient rest. Children who are deprived of their proper allowance of sleep suffer to some extent in growth, and to a larger extent in mental progress and character. Irritability and hypersensitiveness may be noticed, which impede the development of self-control and reasoned judgment. This phenomenon is even more general during summer-time in northern latitudes, where it is the cause of many cases of nervous breakdown. The need for care is not confined to elementary-school pupils; a few years ago the hours of sleep at several public schools were severely criticized and reforms introduced, particularly as regards early rising for the younger pupils. The value of these changes was emphasized during the recent period of food and fuel shortage, when an extra hour in bed in the colder weather was prescribed. Education authorities having charge of industrial schools to-day would do well to revise the hours of rest. The Liverpool leaflet wisely points out that well ventilated and not overheated bedrooms are required. Under present housing conditions it is often difficult to ensure that the younger members of a family are not disturbed by the older retiring at a later hour. Perhaps the most unfortunate child is he of a large family with inadequate accommodation who obtains a scholarship at a secondary school, and has to attempt home study under conditions which often do not permit of work until all have retired. Unless carefully watched, the child in such circumstances may seriously impair his health.

THE Circular (No. 1664) which the Board of Education has recently circulated to local education authorities has two clear objectives: one is to open wider the opportunities of higher education, and make them more accessible to social strata of the population which have not hitherto regarded any form of higher education as within the scope of normal possibilities; the other is to prolong the secondary-school life and stabilize the leaving age. The method of doing this is the maintenance bursary. The Board promise to pay half of the expense incurred by the local education authority in providing such bursaries in secondary schools "and other institutions of higher education." Education is badly handicapped in England because, as the child grows older, it becomes more expensive. It is as much as the poorer household can manage, if it has to feed and clothe the growing boy and girl. If, on the top of this, the parents have to meet

the cost of dictionaries and other appurtenances of Sixth Form education, as well as the expenses inevitably involved in school games, the breaking point is soon reached. The steady rise in the age of entrance to the modern universities, and the growth of advanced courses, tend to prolong the period of strain and to make more severe than ever the competition for university scholarships. Indeed, the maintenance bursary should act as supplementary to the existing scholarship and free-place system.

MANY boys and girls of first-rate intelligence fail to win their free-place either because they are somewhat backward in developing or because their elementary school teacher was not ambitious for them to win it, or through the retarding influence of some juvenile disease. Such pupils are not infrequently just as deserving as the free-placer, only they take longer to find themselves. This is specially true of boys. It is to these that we must largely look for the replenishing of our universities. At present these are full to the limit of their capacity, because they are making up for four years of arrears. Every effort should be made to keep the numbers up to the present level. Even if we succeed in doing so, we shall be behindhand in the proportion of university-trained students to the general population. Where the United States have 10 per 10,000 of the population, Germany has 14, and Scotland has nearly 17, England has only 5. Many education authorities are doing nothing to help their best students to the university. This proffered grant holds out an inducement to them. If inducement fails, compulsion remains, and we trust the Board will not fail to exercise it.

THE extravagantly high cost of building—now nearly three times more than pre-war rates—is a formidable obstacle to the extension of educational facilities, and must seriously delay nearly all progressive developments. Meanwhile, local authorities are considering what they would like to do when the time is opportune. The Kent Education Committee have prepared an outline of educational policy for circulation, more particularly among Part III authorities, with a view to concerted action. The memorandum deals with the provision of practical teaching and of advanced instruction in central schools, the organization of continuation schools, and other matters. It is noted that the system of elementary education in the past has left much to be desired in regard to the older children; that the age of eleven or thereabouts is a critical period in school life, and by that time “the foundations of a general education—at any rate, of the three R’s—should have been laid, and a wider world is unfolding before the pupil; a new method of treatment and a new rate of working is needed if marking time is to be avoided.” It is proposed as, and when, circumstances permit, to supplement the existing elementary-school provision by establishing a system of central schools, or grouping a number of schools and attaching to one or more of them a “central top” providing advanced instruction.

WE are scarcely convinced, assuming adequate facilities are provided by means of secondary and technical schools for the systematic continued education

Central Schools.

of children of special ability, that the policy of making a further selection of “those possessing suitable attainments” for transfer to central schools is wise. The question is one of great difficulty. The promotion of all children without discrimination must inevitably hamper the organization of advanced scholastic instruction, and, unless differentiation is possible, the progress of some of the children might be retarded. On the other hand, the work of a central school should not, in our opinion, be concerned chiefly with ordinary scholastic exercises and the extension of book-knowledge. An important part of its curriculum should consist of handwork and of efforts to influence beneficially character and conduct, which would not depend upon any particular standard of previous scholastic development. It is the child who has not displayed an aptitude for book learning, and is a backward pupil, who would derive real benefit from the special facilities of a central school.

ADULT EDUCATION: A CALL TO ACTION.*

THE Committee on Adult Education, presided over by the Master of Balliol, began their inquiries in the midst of the war, at a time when the war had clearly revealed, to all who had eyes to see, that the education of the masses of our people was largely ineffective, because it was supposed to be completed at the mature age of fourteen. Now that the war is over, and the masses are claiming, and obtaining, better wages and shorter hours, the urgent and momentous question is—what will they do with these benefits? How will they use their higher incomes and their expanding leisure? That is the case from the side of the individual citizen. And from the side of the community at large the case is equally urgent. For in a democracy, whilst, as in any other form of government, the “brains of the concern” have to be supplied by a few thousands, the task of selecting “the natural aristocracy that is among any body of men” devolves upon the millions, and unless the millions are trained to good judgment and supplied with sufficient knowledge, democracy cannot prosper. The projected continuation schools will carry compulsory education as far as it can be carried, at least in our time. But the opportunities of the citizen must not end there. In the words of the Master of Balliol, “adult education must not be regarded as a luxury for a few exceptional persons here and there, nor as a thing which concerns only a short span of early manhood. . . [It] is a permanent national necessity, an inseparable aspect of citizenship, and therefore should be both universal and lifelong.”

If any one is inclined to dismiss this declaration as a Utopian dream, he may be recommended to turn at once to the brief chapter of the Report which traces the history of adult education during the nineteenth century, from the days of the old Mechanics’ Institutes onwards. He will there find that the supply of adult education has never been equal to the demand, and that recent progress, considerable though it has been, affords only an indication of the great things that might be done. He may also be proud to learn that so far England stands second to no other country in regard to the efforts made to afford educational opportunities to adults.

Our readers are aware that three *interim* reports have already been issued, the first relating to industrial and social conditions as affecting adult education, the second to education in the army, and the third to the question of libraries and museums. This final report, after the historical survey above referred to, passes on to consider the principles of, and the

* *Adult Education Committee: Final Report.* (H.M. Stationery Office, 1s. 9d. net.)

present state of the demand for, adult education, and the quality and standard of the work that is being done. It then proceeds to deal with the constructive side, including the general possibilities of adult education, the functions of Universities, local authorities, voluntary organizations, and the State; the provision of teachers, rural education, and the relation between technical and humane education. It then discusses finance and organization, and closes with general conclusions and a summary of practical recommendations. A long and important appendix provides information as to adult education immediately before and during the war, and adult education abroad.

In discussing the motives that underlie the widespread desire for adult education, the Report states that the demand rests upon the twin principles of personal development and social service. In some cases the personal motive predominates, but perhaps in most cases "the dynamic character of adult education is due to its social motive." This accounts for the fact that up to the present the types of study that have found most favour are those that deal with social and economic problems. But the Committee rightly urge that, whilst these studies should be fully maintained, because they are indispensable to intelligent citizenship, there ought to be far wider opportunities for the study of natural science, modern languages, music, literature, and the drama; and also for the cultivation of practical craftsmanship. But withal there must be the utmost liberty with regard to methods and organization.

An enormous programme is thus mapped out. Who is sufficient for these things? The voluntary organizations have done nobly, and their efforts are as much needed as ever. For, "broadly speaking, the advance of adult education can proceed only as quickly as voluntary agencies can stimulate, focus, and organize the demand for it. In the last resort the volume of educational activity is determined, not by the capacity of the universities and education authorities to provide facilities, but by the ability of organizing bodies to give shape and substance to the demand." Nevertheless, the increased help of the universities and the local education authorities is exactly what is needed at the present time. The universities, say the Committee, should definitely organize departments of extra-mural adult education of a liberal character; and the local authorities should establish non-vocational institutes at evening centres for humane studies and for social and recreational activities, and should substantially assist university tutorial classes. The State should, in accordance with what is probably a sound tradition in this country, aid adult education, but leave wide powers of self-organization to those whom it aids.

The report deals fully and in a practical spirit with the important problem of rural education, and recommends *inter alia* the establishment of village institutes under full public control. Important recommendations are also made as to the liberalising of technical education, and the fostering of social life in technical institutes. Finally, the intricate question of financial aid from the State for the various forms of adult education is discussed at length, and definite recommendations are made.

We have hitherto made no reference to the supply of teachers, and if we have left this matter till last it is certainly not because we regard it as the least of the multitude of subjects covered by the Report. On the contrary, no scheme will be worth much which fails to secure the right men and women to realize its aims. Upon the personality and the equipment of the teacher everything that is vital will depend. Here again we have to look to the universities, and we are glad to note that the Committee advocate measures which would make it possible for the universities to provide a sufficient supply of well qualified and adequately paid tutorial class teachers.

One rises from a perusal of the Report with a sense of mingled admiration and gratitude. Both in its firm hold upon essentials, and in its comprehensive grasp of detail, it is worthy of the Committee and of the distinguished chairman. And to say that is to say a great deal.

WHAT WE MAY COME TO.

A MASTERS' MEETING IN 1930.

BUT Millet was not long in finding that the way of the educational reformer is hard, and he made it no easier for himself by the indiscretion of a characteristic outburst at a masters' meeting.

The business was not much, and was quickly disposed of, and the head master was about to declare the meeting adjourned, when Millet came into action.

"I want more time for games," he said. "I know I am espousing a cause which is not greatly in favour at Marlton, but, after all—"

"After all," interrupted the senior biology master, "the time allotted to games is even now much in excess of that given to any other subject."

"That is only true," rejoined Millet, "if you count the eurhythmic hours, and I contend that those hardly deserve to rank under the same heading." He was still outwardly cool, but I saw that he restrained himself with difficulty.

"When I was a boy," croaked the senior classical master, "we succeeded in finding spare time of our own—"

His voice was drowned by the bellow of the specialist in economic geography. "If we are to hold our own in the trade war with China—" Apparently thinking it needless to finish his sentence, he leaned back with folded arms and assumed the smile of a victor in debate.

"Only one half-holiday a fortnight given to cricket," went on Millet. He was redder now, and his breath came in jerks. I saw that his passion for athletics was mastering his discretion. "How can we expect—"

I tried to kick him under the table, but I must have taken poor aim, for Judkins, who taught the minor African languages to the Army Class, started up and glared angrily round the room.

"You choose all your prefects from the ranks of weedy scholars," Millet was now saying. "To be athletic is looked upon as a disqualification; the best football player in the XV has to yield precedence in the school to the most insignificant member of the Sixth."

"Very naturally and very rightly," said someone higher up the table, a house master, no doubt.

"These unlettered barbarians!" Perrin, our lecturer in art appreciation, may not have meant his aside to be heard. But Millet heard it, and now the full tide of red-hot lava poured from the volcano in his breast.

"The most important thing we teach here—to any but those who are blinded by the scientific tradition—and the most shamefully neglected. We teach a boy to analyse the primary rocks and to investigate the breathing organs of the mollusc, and do not encourage him to study and make the best use of his own wonderful frame. Only the purblind ignorance of those saturated in the folly of—"

"Really, really!" murmured the head master.

"Wilfully and of set purpose to repress—"

Our seven English specialists fell limp in their chairs. Amid a strained silence the head master pushed back his chair and, dignified as ever, walked out, and I turned to Millet and said, "You've done it now!" . . . R. C. W.

GEOGRAPHICAL ASSOCIATION. — The annual meetings will be held at the London Day Training College on January 9 and 10. On the first day Mr. T. W. F. Parkinson will open a discussion on "The Present Position of Geography in the Upper Forms of Secondary Schools; some causes and possible remedies." Mr. H. E. Storey will give a demonstration of his "Wind" apparatus. Dr. R. N. Rudmose Brown will give a lantern lecture on Spitsbergen. Sir Charles P. Lucas will deliver his presidential address on "Islands, Peninsulas, and Empires." At 3 p.m. on January 10, Mr. M. De Carle S. Salter, will lecture on "Rainfall considered as a Geographical Function."

PERSONAL PARAGRAPHS.

THE post of Principal Officer to the University of London, which has been in abeyance since Sir Henry Miers's resignation in the summer of 1915, is to be occupied by Sir Cooper Perry, in February next. Sir Cooper Perry was educated at Eton and at King's College, Cambridge. He gained the Bell, Browne, and Pitt Scholarships and the Browne Medal, graduated as Senior Classic, and became a Fellow of his College. Since 1892 he has been Superintendent of Guy's Hospital, where he is also Consulting Physician. He has represented the Faculty of Medicine on the Senate of the University from 1900 to 1905, and again from 1915 to the present time; and has been Vice-Chancellor since June 1917.

* * *

DR. R. H. PICKARD, F.R.S., has been appointed principal of the Battersea Polytechnic. Dr. Pickard has been principal of the Municipal Technical School, Blackburn, since 1908, and has been for some years consulting chemist to the Corporation of Blackburn and the Blackburn Cotton Employers Association. He has done much for the advancement of chemical knowledge by the publication of the results of his researches in the transactions of various learned societies. During the war he placed his services as a research chemist at the disposal of the Explosives Supply and Chemical Warfare Committee of the Ministry of Munitions.

* * *

THE REV. C. J. SMITH, head master of the Latymer Upper School, Hammersmith, is to be President of the Incorporated Association of Head Masters during the coming year. Mr. Smith has been for many years a member of the Council of the Association, and has rendered valuable services as Chairman of the Legal Committee and as treasurer of the Association. Under his administration Latymer School has become one of the most efficient and successful day schools of the country.

* * *

MR. T. KINGDOM, assistant master of St. Olave's School, Southwark, since 1905, has been appointed head master of the Wyggeston Boys' School, Leicester, in succession to the Rev. James Went, who is retiring after having held the position for over forty-two years. Mr. Kingdom received his early education at St. Olave's and had a brilliant career at King's College, Cambridge. He was awarded a classical exhibition at his college in 1900, and subsequently was placed in the First Class of the Classical Tripos, First Part, and again in the First Class of the Second Part, taking archæology as a special subject. During his fourth year he took a course of training at the Cambridge Day Training College and was president of the Cambridge University Swimming Club.

* * *

MR. F. I. KEMP, physics master at Clifton College, Bristol, since 1913, has been appointed head master of the Haberdashers' Aske's Hampstead Boys' School, *vice* Mr. C. J. L. Wagstaff resigned. Mr. Kemp is an Old Boy of Christ's Hospital and a Scholar of Jesus College, Oxford. He obtained First Class Mathematical Moderations (1906) and Second Class Natural Science (Physics) 1908. He has had teaching experience at Penarth County School, King's School, Warwick, and King Edward VII School, Lytham.

* * *

MR. R. B. HENDERSON, head master of the Strand School, Brixton Hill, has been appointed head master of Alleyn's School, Dulwich, in succession to Mr. F. Collins, who is resigning the head mastership. Mr. Henderson was educated at Bristol Grammar School and New College, Oxford. He has been head master at the Strand School since 1911. Before his appointment to the Strand School he was for nine years an assistant master at Rugby School. During the war he served with the Royal Garrison Artillery, obtaining the rank of lieutenant-colonel.

It is pleasing to record the names of two more assistant masters who are taking an active part in educational administration: Mr. W. F. Piper, who is the new Chairman of the Ealing Education Committee, and Mr. W. J. Pincombe, who has been appointed a member of the London County Council Higher Education Sub-Committee.

* * *

MR. F. R. DALE, Classical Sixth Form Master, Leeds Grammar School, is to succeed the Rev. H. J. Chaytor, resigned, as head master of Plymouth College. A former pupil of Oundle and a scholar of Trinity College, Cambridge, Mr. Dale graduated with First Class (First Division) Classical Tripos (1905) and First Class Classical Tripos, Part II (1906). He was also Chancellor's Medallist (1906). During the war he served in the Welsh Regiment, eventually becoming second in command.

* * *

MISS E. M. TANNER, head mistress of Nuneaton High School, has been appointed head mistress of the Bedford Girls' High School, in succession to Miss Collie, resigned. Miss Tanner, who is well known as a zealous educational reformer, has been president of the Midland Association of Head Mistresses for the last three years.

* * *

MISS C. R. ASH, late third mistress at St. Paul's Girls' School, has been appointed head mistress of the Godolphin School for Girls, Salisbury. Miss Ash graduated B.A. Dublin and obtained a First Class, Oxford Modern Language School. She takes up her new position in January next.

* * *

THE death of Mr. John Stogdon, late senior assistant master at Harrow School, on November 19, will be keenly regretted by many generations of Old Harrovians. Mr. Stogdon, who was seventy-six years of age, was one of Harrow's best-known masters, and went to the school fifty years ago. He succeeded to a small house in 1877 and, three years later, took over West Acre, the large house in London Road, where he remained until his retirement in 1903. He was educated in Germany and at Uppingham and Clare College, Cambridge, where he was Sixth Classic and Bell University Scholar. Few masters have ever been so intimately the friends of their pupils, in school days and afterwards. He was a most stimulating teacher, with an unfailing sense of humour and an unbounded interest in almost all things.

* * *

MR. F. W. HEADLEY, whose death is reported at the age of sixty-three years, was educated at Harrow and at Caius College, Cambridge, where he took a First Class in Classical Honours in 1878. He was appointed to a mastership at Haileybury College by Dr. Bradby in 1880, and had the unique experience of working under no fewer than five head masters during a total service of about forty years. From 1894 till 1914 he had charge of Lawrence House. He resigned in the summer of 1914, but on the outbreak of war returned to take the place of a master on active service, and for four years took charge of Trevelyan House. He was keenly interested in problems connected with the flight of birds, and published several books on the subject. An enthusiastic and lovable teacher, many Haileybury naturalists owe to him their first inspiration.

* * *

THE death of Miss Hadland, late head mistress of Milton Mount College, Gravesend, at the age of eighty-five, severs a precious link with the past to members of the Assistant Mistresses' Association. She was the last surviving original member of the association, and until two years ago had regularly attended the annual conferences.

ONLOOKER.

TOPICS AND EVENTS.

NORTH OF ENGLAND CONFERENCE.—As already announced this Conference will be held at Southport on January 8 to 10 inclusively. At the meeting on January 9, Mr. Fisher will deliver the inaugural address, after which the general meeting will discuss "The Education of Adults," the subject being introduced by Sir Henry Hadow and Mr. J. M. McTavish. On January 10, the subject for discussion by the general meeting will be "Continuation Schools in Urban and Rural Areas," the speakers including Major Ernest Gray, Messrs. W. A. Brockington and H. Rostron and Miss E. R. Conway.

THE MATHEMATICAL ASSOCIATION.—The annual meeting will be held at the London Day Training College, Southampton Row, W.C.1, on January 7 and 8. Among papers to be read at the meeting on January 7 are "The Use of Symmetry on the Teaching of Geometry," by Mr. C. Godfrey, M.V.O.; "Convention and Duplexity in Elementary Mathematics," by Prof. E. H. Neville; "The Place of Common Logarithms in Mathematical Training," by Miss H. M. Cook; "Some Mathematical Problems awaiting Solution," by the President, Prof. E. T. Whittaker; and "The Teaching of Mechanics to Beginners," by Mr. R. C. Fawdry.

CONFERENCE ON MODERN CLASS MANAGEMENT AT DERBY.—A Conference on Modern Class Management was held at Derby from November 5 to 8. That it answered a need was evident from the large audiences. The lecturers described educational experiments dealing with the life of children from nursery class to continuation school. The underlying idea was that education should take into account the child's natural activity, the teacher's part being to surround the children with interests, such as tools, plants, pets, models, attractive books, and opportunities for dramatic and outdoor work. The classroom should be a children's clubroom. Instead of silence there should be conversation about work and interests, and bodily restriction should not be a bar to mental activity. The life of children of eight and under was dealt with by Miss Brown-Smith, Goldsmiths' College; Miss Hampson, Leigh; Miss Tennant, Luton; Miss Salt, Graystoke Training College; and Miss Grant, London. Apparatus and games for the teaching of reading and number were shown in the exhibition, which was open daily. Developments in the work of senior children were described by Mr. O'Neil, Manchester; Mr. J. H. Simpson, Rugby; Mr. John Arrow-smith; Mrs. Amor, London; Miss Pimblett, Manchester; Miss Margaret Frodsham, Halsey Training College; and Mr. H. J. R. Murray. Emphasis was laid on the need for greater freedom, although it was agreed that children must learn that their freedom ends where the rights of others begin. A co-operative spirit of work should be fostered by less class teaching, fewer appeals to the competitive spirit, and more individual and group learning.

GOVERNMENT COMMITTEE ON THE STUDY OF CLASSICS.—The Prime Minister has appointed a Committee "to inquire into the position to be assigned to the Classics (*i.e.* to the language, literature, and history of Ancient Greece and Rome) in the educational system of the United Kingdom and to advise as to the means by which the proper study of these subjects may be maintained and improved." The constitution of the Committee is as follows: The Marquess of Crewe (Chairman), the Very Rev. Sir George Smith, the Rev. C. A. Alington, Mr. S. O. Andrew, Miss M. D. Brock, Prof. the Rev. Henry J. Browne, Prof. John Burnet, Mr. T. R. Glover, Sir Henry Hadow, Miss K. Jex-Blake, Prof. W. P. Ker, Mr. J. G. Legge, Mr. R. W. Livingstone, Mr. G. A. Macmillan, Prof. Gilbert Murray, Mr. Cyril Norwood, Prof. W. Rhys Roberts, Mr. C. E. Robinson, Prof. A. N. Whitehead; Secretary, Mr. C. Cookson, H.M. Inspector of Schools. Communications intended for the Committee should be addressed to Mr. C. Cookson, at the Offices of the Board of Education, Victoria and Albert Museum, Exhibition Road, South Kensington, S.W.7.

MANCHESTER HIGH SCHOOL FOR GIRLS.—The name of Miss Elizabeth Day, who was its first head mistress, will ever be held in high esteem in connexion with the Manchester High School. She began her duties in 1873 and died in 1917. The plan to erect a gymnasium as a memorial to her, which has been in abeyance during the last twelve months, is now, with the renewed possibility of building, being revived, and a further appeal has been sent out to Old Girls and others interested in the school to send contributions to the fund. These may be sent to Miss Helena Bourne,

The Manchester High School, Dover Street, Manchester, S.E.; or to The Elizabeth Day Memorial Fund, Williams Deacons Bank, Ltd., 297 Oxford Road, Manchester. A sum of £1,700 has been collected already, but this should be doubled to make it possible to carry into effect the provisional scheme prepared for a building to stand on the north-east corner of the school playground. It is known that Miss Day desired to have a gymnasium to complete the buildings for the school, which now numbers 700 pupils. The Committee is anxious that there shall be a rapid inflow of subscriptions, and that Old Girls of the school, wherever they may be, shall participate in the movement.

THE ASSOCIATED BOARD R.A.M. AND R.C.M.—The Exhibitions offered annually by the Associated Board of the Royal Academy of Music and the Royal College of Music, for two or three years, have been awarded to the following candidates: Betty M. Humby, London, pianoforte; Joan Lloyd, London, pianoforte; Christina G. Macdonald, Swansea, singing—at the R.A.M. Mary C. M. Nono, London, pianoforte; Nina Joel, London, violin; Muriel M. Hart, London, viola—at the R.C.M. The exhibitions previously held by Vera J. Cree (Sydney, N.S.W.), Olive A. Groves (London), Denise Lassimonne (London), Audrey V. Goldsteen (London), and Mabel Linwood (Nottingham), at the R.A.M.; and Dallas A. Fraser (Cheltenham), Anne Wolfe (London), Richard W. Edmunds (London), Doris M. M. Thatcher (Exeter), Marjorie B. Edes (London), Philip J. Collis (Ryde), and Adrian Holland (Melbourne, Australia) at the R.C.M., have been renewed for a further period of one year.

KING ALFRED SCHOOL SOCIETY.—This society is making an appeal for at least £15,000 to erect new buildings upon a site which has been purchased within a mile of the present school, the accommodation of which has become altogether inadequate for the number of pupils seeking admission. The present school was opened in 1898 in Hampstead as a secondary co-educational day school. Partly because of its special characteristics—freedom from all official control, absence of formal religious instruction, co-education, small classes, greatly reduced homework, freedom from imposed examination and scholarship preparation, free methods of self-discipline, disbelief in marks, prizes, and traditional "punishment"—and partly because of its special disabilities—cramped space and makeshift playing-fields—the school till quite recently had never earned its cost, and but for the generous support of many friends must long ago have ceased to exist. Believers in independent enterprise in education are invited to come to the assistance of the society. Donations may be sent to the Hon. Treasurer, Mr. G. C. Maberly, 24 Ellerdale Road, Hampstead, N.W.3.

THE MONTESSORI SOCIETY.—The society has recently circulated a letter of appeal, drawn up by Mr. and Mrs. Broadwood, for funds with which to found in England a Montessori Institute, which shall serve as a worthy war memorial for those who have given their lives for their country. About £25,000 is required to start with. Dr. Jessie White is honorary treasurer and organizing secretary of the society, and may be addressed at 11 Tavistock Square, London, W.C.1.

CAMBRIDGE LOCAL EXAMINATIONS.—The December Cambridge Local Examinations were held at 206 centres in the United Kingdom and the Colonies. There were 12,318 candidates, of whom 127 are entered for the Higher, 4,059 for the Senior, 5,186 for the Junior, and 2,946 for the Preliminary Examination. Of the Colonial centres, 31 are in India, 7 in Ceylon, 6 in the Straits Settlements and Malay States, 6 in South and West Africa, and 10 in the West Indies. There are also centres at Belize, Bermuda, Buenos Aires, Mauritius, Seychelles, Shanghai, and Tientsin.

THE WESTMINSTER PLAY.—After six years Terence has returned to his own at Westminster. The "Adelphi" was the play selected. It says much for the Elocution of the Latin that one, who was not before familiar with the unique pronunciation maintained jealously by the King's scholars, could without book follow much of the spoken word. The cast, which had to renew a broken tradition, acquitted themselves well; Mr. Dix, in particular, as the crafty versatile slave, and Mr. Stevens as the irascible and Catonian father, showed considerable dramatic power, and whatever the play may be, if it is two thousand years old, it needs no little courage to infuse into it anything of dramatic life. It seems all the more difficult, when the setting, though precise in

detail, is that of the conventional canvas reconstruction of an ancient city. Shakespeare, one would think, was wiser with a black curtain and a label for his Rome or Athens. It was the more noticeable, as the grey walls of the auditorium, draped in red and lined with black and white, had a medieval aspect. The Epilogue, reviewing with light ridicule and apt ingenuities of phrase the conventional figures of war days, roused an interested house to hearty appreciation; but one could not but feel that its Latin form gave it the distinct advantage of a disguise, without which it would have savoured too much of the task of a popular Press, too little of real humour or the humanities. The curtain down, one came away with a temptation to ask for a railway ticket in Latin, and with a feeling that the League of Nations might do worse than take a leaf from Erasmus and use the language for its universal correspondence.

PRIMARY SCHOOL NOTES.

The Provisional National Minimum Scale.

THE notable modesty of the proposals of the Burnham Committee on Salaries represents an indication of the grave difficulty experienced by its members in bringing home to the educationally inert districts of this country the necessity of raising the status and emoluments of the teaching office. To teachers who are working in such areas the scale undoubtedly offers material relief, and on this account those who are opposed to the adoption of the scale will find it difficult to reject it. In estimating the force of the opposition to the proposals, two factors require consideration: that a number of education authorities have already adopted salary schemes substantially in advance of the national minimum scale, while, in most of the great centres of population and industry, the teachers are anticipating much more generous treatment than is outlined in the Burnham report. It is possible that teachers of the first category may exercise a benevolent neutrality, but in the second case it is clear that acceptance of the report would not strengthen the case for securing salaries in excess of the standard therein set forth. It is estimated that 30 per cent. of existing teachers would gain no advantage from the adoption of the national minimum proposals. In many instances young teachers, not included in this percentage, would secure no immediate benefit. Consequently it is clear that a large proportion of primary teachers will be opposed to the adoption of the national scale within their areas, whatever decision may be registered at the London meeting of the National Union of Teachers. The uncertificated and supplementary teachers who are not members of the Union may be expected to oppose the Burnham proposals vigorously. The combined efforts of this opposing body will probably secure the position of the national minimum scale as a definite minimum, applicable only to the least progressive educational parts of the country.

The Sectionalization of the Teaching Profession.

THE new Education Act appears to have encouraged the sectional development of the teaching profession by its conception of continued education which will require many types of schools staffed by teachers of varying qualifications. If the effect of the proposals for a national minimum scale of salaries should be a general classification of teachers as rural and non-rural, there is the prospect of additional sectional distinctions being set up. The disadvantage of this tendency is that it discourages the free movement of teachers from grade to grade so strongly advocated by the President of the Board of Education. On the other hand, there are movements already established in Yorkshire, Lancashire, Cheshire, and the Midlands, for the federation of all classes of teachers who are concerned for the common good of education in their respective districts. In effect, there is a natural movement for teachers tacitly to adopt the principle of educational provinces possessing considerable administrative and advisory functions formerly associated with the great executive unions. By the delegation of greater powers to local associations, the balance may in this way be redressed by the Teachers' Unions. Ultimately the effect of close association in local work may bring about the federation of all the professional bodies into one comprehensive union as is the case in Scotland.

The Function of Inspectors.

So far as the inspectors of local education authorities are concerned, the function of educational policeman has long been abandoned. At least one prominent education authority has found it a

sound policy to dispense with the examining functions of its inspectors by transferring them to work of a definitely consultative character; and the inspectors have not been replaced when their appointments have lapsed. Although the representatives of the Board of Education are generally welcomed in the schools, there is evidence that the old tradition in certain cases dies hard. At a recent meeting of teachers, the case was given of an inspector of the Board who set an essay to children of eleven and twelve years on: "State your opinion on Home Rule for India." The pupils were individually tested by means of arithmetic cards after the custom which prevailed twenty-five years ago. In due course a voluminous written report was sent in which had the effect of stirring up a strong feeling of injustice in every member of the school staff. Cases are common where four or five inspectors visit single schools simultaneously for two or three days, leaving behind them the effects of an educational whirlwind; school work is upset, teachers are criticized to the verge of exasperation, and although there is consultation of a type it is not always comparable, for example, with the free interchange of opinion and helpful discussion which takes place when the school medical officers, the school managers, or local directors of education visit the schools. The interesting suggestion was made at the meeting referred to that no inspector should be allowed to write a report upon a school until he had taught in it for one month at least. The general feeling was that reports serve no useful educational purpose.

N.U.T. Notes.

THE total subscriptions to the Thank Offering Fund of the Union now approximate to £40,000. Grants are being made to retired teachers who have failed to secure the benefits conferred by the existing superannuation scheme. In order that the interests of teachers engaged in the Army, Navy, Air, Industrial, and Reformatory services may be adequately consulted, a Joint Committee has been appointed, composed of members of the Executive of the N.U.T. and representative teachers from the services referred to. A conference has been held between representatives of the N.U.T. and the Educational Institute of Scotland in order to discuss the interchangeability of school service for superannuation purposes, and other important points connected with the working of the two national schemes. In order to secure adequate expression of the opinion of uncertificated teachers, who are now eligible for membership of the Union, a special Sub-Committee is to be constituted. At the December meeting of the Executive, reports were presented on the facilities offered by Margate, Bridlington, Carlisle, and Tynemouth for the Easter Conference of 1921. Bridlington was selected as being the most suitable town.

CORRESPONDENCE.

THE PHYSICAL EDUCATION OF OUR PEOPLE.

To the Editors of The Journal of Education and School World.

DEAR SIRS,—It needs the onset of national emergencies to awaken the public generally to a sense of relative physical unfitness. After the South African war attention was directed to the defects found among recruits and volunteers, with the result that Commissions were held to inquire into physical deterioration in this country and into physical training in Scotland. The ultimate result was the establishment of the system of compulsory medical inspection and permissive treatment of school children in elementary schools, and also an improvement in the methods of physical education—more especially in the secondary schools for girls. Slowly, but surely, a certain degree of improvement was effected.

The results of the examinations of recruits in the great war has again attracted attention to the undue proportion of ineffectives in the population. Some of this inefficiency is due to lack of adequate treatment, a cause which is rapidly diminishing, and will doubtless be further met by the new Ministry of Health. The figures, so far as they are available, show that, in addition to the evils of actual defects, there is a group due to the lack of keeping in condition which affects a large part of the population. The improvement in the recruits after a brief period of systematized exercises, work, and games shows how much could have been avoided by proper provision whereby the individual was more largely a participator, instead of a spectator, in games. There is some reason to believe that the results of the examinations of candidates for the women's auxiliary services showed this even more clearly than those of the men. Those who had continued in athletic clubs, factory girls' clubs, and the like, with opportunities for games and dancing, re-

(Continued on page 20.)

PATON'S LIST of SCHOOLS and TUTORS

An Aid to Parents in the Selection of Schools.

23rd ANNUAL EDITION NOW PREPARING.

EVERY YEAR THOUSANDS OF PARENTS CONSULT
THIS BOOK.

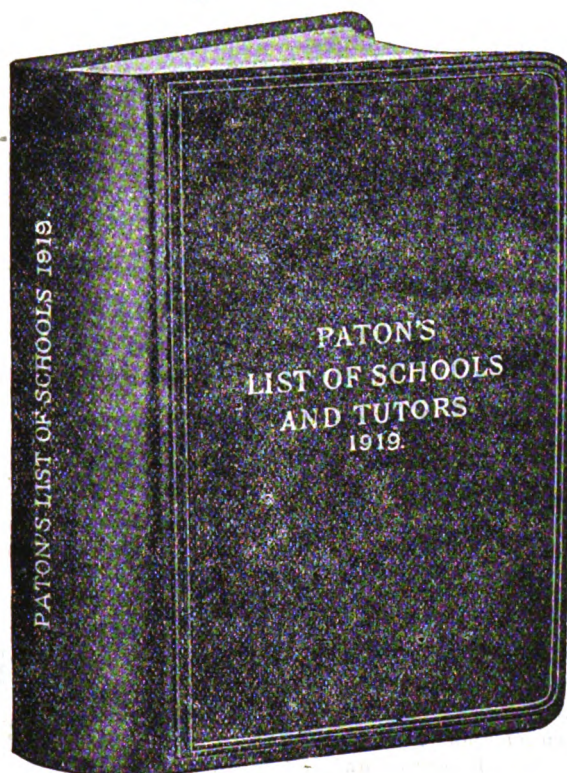

"I am glad to find I have got another pupil this term through the advertisement of the school in your book, so am glad I was persuaded to keep it in."

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"I enclose a request to have my notice renewed. I would not for anything leave it off now."

"When I first came here I spent over £50 in six months advertising in the leading papers—result, **one** boy. Then I came under your Agency—result, a **steady stream** of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

National Library of Ireland, Dublin.—"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term **four** pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

**Specimen Copy and full particulars sent free of charge to
Head Masters and Head Mistresses.**

mained in good physique; while many who had given up these pastimes for sedentary recreation had suffered severely in physique. The task of dealing with the causes of unfitness would appear to be only partially attempted until wider measures are taken to secure general and adequate physical recreation.

With the need for such action none will cavil, but some of the methods proposed demand further consideration. It has been suggested that there might be a Directorate of Physical Education, to be attached to the Ministry of Health, to evolve a system of such education and advise voluntary bodies; a National Council of representatives of those associations whose work warrants their inclusion; and a peripheral organization on a territorial basis, with power, money, and personnel to maintain an organized system.

All this implies a new organization endowed with plenary powers and adequately financed, whereas all these postulates are already provided for. Under the Education Act of 1918 many children will eventually be required to attend school until eighteen for part time at least; even now numbers attend evening schools, clubs, Y.M.C.A., and similar bodies, for a far longer period. Education authorities are empowered to supplement and improve social and physical training both for those under age who attend elementary schools, and those over that age who attend any educational institution either in the day or in the evening. The term is quite vague, and may apparently be used to supply instructors and equipment to any club for the physical education of its members. Any association can thus obtain all necessary assistance and advice from the Local Education Authority, while the Board of Education maintains a special and particularly well qualified staff of inspectors of physical training, which, it is understood, has been specially strengthened to meet the new conditions. The organization and an advisory body are thus to hand, and the money may be granted by any competent local education authority.

Considerable difficulties are involved in the transfer of medical inspection to the Ministry of Health, and in the discussions in the House of Commons it was clearly recognized that these powers of the ministry for a long time, if not permanently, would have to be exercised through the medium of the Board of Education. If this is so in a manner which is only ancillary to education, how much more so in a matter which is an integral part of the educational system. No man can serve two masters; either there must be a

disruption and part of education be handed to the Ministry of Health, or there must be a dual system by which the child or person in an educational institution is controlled by one Ministry and the person only attending a club controlled by another. Also it would then come about that educationists must be attached to the Ministry of Health to advise them on the educational side. This would indeed introduce over-lapping—the essential feature the Ministry of Health Act was intended to avoid.

All that is necessary can be secured by pressure on the Board of Education to secure that all local education authorities in submitting their schemes under the 1918 Act for approval shall incorporate provision for physical education, including playing fields and gymnasia for all classes of the community in need of such facilities, and to make necessary arrangements for co-operation with voluntary bodies who will render assistance.—Yours &c., M.D.

THE PRINCIPLE OF ARCHIMEDES.

To the Editors of The Journal of Education and School World.

DEAR SIRs,—It is generally admitted that the historical treatment of science is not easily adapted to the needs of the public school curriculum. Yet there are occasions when decided advantages would be gained by the use of old-time practical methods. The refinements of modern laboratory equipment, while enabling us to work under conditions happier than those of old, tend at times to obscure the fundamental principles of science, the applications of which have made these refinements possible.

This is particularly true in work depending upon the Principle of Archimedes. If instead of a school balance we use a simpler form of lever, consisting of a metre rod bored at the 50 cm. mark and supported by a horizontal knitting needle, the gain in clean understanding of principle will far outweigh any slight disadvantage arising from difficulty of precise reading. By adopting Galileo's method we reduce our readings and arithmetical work to a minimum; we run no risk of splashing water over balances; and we are not restricted to bodies of comparatively small volume.

(Continued on page 22.)

Catalogue and Announcement List on Application.

METHUEN & CO., LTD., 36 Essex Street, London, W.C. 2.

I. To find the specific gravity of a solid heavier than water, and insoluble in water.

Fig. 1.

W, the solid, is hung from B (Fig. 1), and a sliding weight M, used to give a balancing anti-clockwise moment about the fulcrum O, is hung from A,

$$\therefore M \times AO = W \times OB.$$

W is now immersed in water, and M is moved to A₁ to give a balance, $\therefore M \times A_1O = W \times OB - T \times OB$, where T is the "upthrust" due to displacement of water.

Hence specific gravity of W is

$$\frac{W}{T} = \frac{AO}{AA_1}.$$

Here a bucket will be as serviceable as a beaker! Two readings only are required.

II. To find the specific gravity of a liquid L.

W is now immersed in the liquid L, and M is moved to A₂ to balance.

Hence specific gravity of L is the ratio of the new "upthrust" to the one given by water = $\frac{AA_2}{AA_1}$.

III. To find the specific gravity of a solid W which floats in water.

By a very simple arrangement it is possible to avoid any special readings with the sinker S.

Fig. 2.

S and S₁ are solids of the same material, balanced as shown (Fig. 2). No readings are taken. If S and S₁ are both immersed in a liquid, the equilibrium is not disturbed.

W is fastened to S (Fig. 3), and the sliding weight M hung from A.

Fig. 3.

S₁ and the combined body SW are now immersed in water, and M is moved to A₁. (In this experiment A₁ is on the right of O.)

$$\text{As before, specific gravity} = \frac{AO}{AA_1}.$$

Throughout the experiments the position of B is unchanged. The only readings taken are those giving the positions of M.

WM. HUNT'S
OXFORD "IDEAL"
LOOSE-LEAF
EXERCISE BOOK.

(Patent.)

WM. HUNT'S Patent "Ideal" LOOSE-LEAF NOTE-BOOK constitutes the best and most convenient Higher Form and Science Class Exercise Book, Lecture Note Book, Loose-Leaf Scrap Book, Storage Covers for Notes, Letters and Papers of all sorts yet invented. The Book opens perfectly flat for writing, and binds up absolutely securely; can be un-made and re-made and the leaves transferred from one book to another or new leaves added in any manner without trouble and without risk of disarrangement or loss. No rings, posts, arches, or mechanism of any sort. Only one book necessary for many subjects, (each subject can be transferred to its own distinctive cover as convenient). 18 sizes and several qualities. Capacity one leaf or 300 with no waste bulk. "IDEAL" for preserving NOTES OF LECTURES and other matter in convenient and easily accessible form.

Showing the Book containing 300 sheets of paper closed. The Divisible Lace is here shown joined, by inserting the Pointed Tag into the Barrel Tag. When the Book is in use the Lace should be joined as above only. When not in use the lace ends may be tied in a bow knot. The Book automatically accommodates itself to any number of leaves, few or many, with no waste bulk.

Showing the manner of changing leaves. A leaf is shown withdrawn from one Divisible Lace before withdrawing it from the other.

MUSIC IN PREPARATORY SCHOOLS.

To the Editors of *The Journal of Education and School World*.

SIRS,—In suggesting in your December issue that the existing notation is to blame for the very feeble vocal and piano sight-reading powers displayed by boys who come up from the preparatory schools to the public schools, my friend Mr. Walter Thelwall draws, I fear, a very big red-herring across the trail. The effect of Mr. Thelwall's letter is to provide the heads of preparatory schools with an excuse to which they are not entitled.

Admirable results in vocal sight-reading are obtained in many elementary and secondary schools even with the present two vocal notations. Such results are therefore quite possible in the preparatory schools also.

Similarly, thoughtful piano teachers, both private teachers and teachers in the better girls' secondary schools, are obtaining good sight-reading from their pupils with the existing keyboard notation. There is therefore no reason why similar results should not be obtained in boys' preparatory schools.

In both cases it is the adoption of sensible modern methods and the allowing of sufficient (not excessive) time that are needed.

I agree with Mr. Thelwall that the existing staff notation is extremely illogical, but the reform he wishes to introduce involves nothing less drastic than the destruction of existing printed music throughout the world, and its replacement by reprints on the Thelwall "Note for Note" system. This is a big order. If Mr. Thelwall can get it executed in his lifetime and mine I shall be delighted, but I do not endorse his recommendation that head masters should in the meantime "cease trying to make the junior teachers" produce results with the present system and give their energies to agitation for a better one.

In fine, the present staff notation is admittedly faulty, yet good results are easily possible if head masters will but take the subject of music seriously. Mr. Thelwall's system is probably better, but if or when it is adopted it will still be necessary (a) to make adequate provision for music in the time-table, and (b) to appoint keen, qualified, and trained teachers, and support them in their efforts.

I am prompted to write this letter by the fact that I am this year President of the Union of Directors of Music in Secondary Schools, the Council of which issued the original letter to which your kind paragraph and Mr. Thelwall's letter refer; but I do not write offi-

cially, since I have had no opportunity of discussing Mr. Thelwall's communication to you with my Council.—Yours faithfully,

"The Music Student,"

PERCY A. SCHOLES.

Montague House,

Russell Square, W.C.1.

CHILDREN AND ROAD SIGNS.—Distributed along the roads in England, Scotland, Ireland and Wales are thousands of road signs and warnings which have been erected by the Automobile Association, not only for the benefit of motorists, but also to ensure the safety of pedestrians and other road users. Among the familiar "A.A." triangular signs printed in yellow and black, indicating dangerous corners, level crossings, steep hills, &c., there is one which has undoubtedly been of great value in protecting school children from roadside accidents. This sign is one that is erected near schools situated on roads frequented by motor and other traffic. In every case two signs are provided, so that the drivers of motor vehicles from either direction may know that a school is being approached, with the result that considerate drivers will always slow down while passing the school. Altogether the A.A. has erected 4,000 road signs, warning highway users concerning schools. The Association has also, at considerable expense, sign-posted 3,451 villages with what are known as "village" signs. These signs show, in the centre, the name of the village, while other information given includes the mileages to the nearest villages or towns in either direction, and the mileage to London or other nearest important centre. The value of these road warnings and notices to the public as well as to motorists is well recognized; therefore the Automobile Association feels that it may, with all confidence, appeal to head masters and head mistresses and teachers in schools to impress upon their pupils the importance of refraining from doing anything which may mutilate or destroy the signs. The co-operation of those in charge of schools is sought by the Automobile Association, and it is hoped that children will have pointed out to them the foolishness of damaging these signs, which are erected for the benefit of every passer-by, and, in the case of the school signs, chiefly in the interests of school children.

"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster.*

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. (New and enlarged edition.) **5s.**

"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World.*

School Geometry (Matriculation Edition). By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. **4s. 6d.**

Covers fully the syllabus for London University Matriculation.

Graphs, Matriculation. By C. H. FRENCH, M.A., and GEORGE OSBORN, M.A. **1s. 6d.**

"The explanations are remarkably clear."—*Secondary Education.*

Hydrostatics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. *Second Edition.* **2s. 9d.**

"An excellent text-book."—*The Journal of Education.*

Mathematics for Technical Students, A First Course in. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. *Second Edition.* **2s. 6d.**

"The authors have succeeded in creating a 'workshop atmosphere' around this elementary course."—*Nature.*

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. **3s. 6d.**

Mechanics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. *Third Edition.* **4s. 6d.**

"A practical book for this subject. It will be found exceedingly useful."—*Educational News.*

"Affords beginners a thorough grounding in Dynamics and Statics."—*Knowledge.*

Trigonometry, Junior. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. **3s. 6d.**

"The examples given are numerous in each chapter, the diagrams and the arrangement practical."—*Secondary Education.*

BOTANY, CHEMISTRY, PHYSICS, &c.

Botany, Junior. By FRANCIS CAVERS, D.Sc. **3s. 6d.**

"Dr. Cavers has achieved a useful little book."—*Journal of Botany.*

"Combines observational and experimental work with text-book instruction in a judicious fashion."—*Preparatory Schools Review.*

Botany, Senior. By FRANCIS CAVERS, D.Sc. **5s. 6d.**

"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purpose underlie the manifold variations which plants assume."—*Nature.*

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. *Second Edition.* **3s. 6d.**

"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine.*

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. *Second Edition.* **5s. 6d.**

"The ground is well covered on experimental lines. There are questions to every chapter and a section on chemical calculations."—*Guardian.*

Chemistry, Senior Practical. By H. W. BAUSOR, M.A. **3s. 6d.** Including preparations, experiments on action of heat, quantitative and qualitative analysis.

Chemical Calculations. By H. W. BAUSOR, M.A. **2s. 9d.**

"The calculations which are inseparable from Chemistry from its very beginnings are dealt with concisely, yet at sufficient length to make them clear to a young student."—*Knowledge.*

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. **2s. 9d.**

"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal.*

Heat, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **4s.**

"The information is accurate and up to date."—*The Journal of Education.*

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc. *Sixth Edition. Revised and Enlarged.* **3s. 6d.**

"A continuous and well-developed course of instruction in Hygiene. The facts are always reliable, the illustrations serviceable."—*Schoolmaster.*

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. **3s. 6d.**

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times.*

Magnetism and Electricity, The School. By R. H. JUDE, D.Sc., M.A. **4s. 6d.**

"From first to last there is an originality of treatment which makes it interesting reading."—*Nature.*

Mechanics and Physics, (Mechanics, Hydrostatics, and Heat), An Introductory Course of. By W. M. HOOTON, M.A., M.Sc., F.I.C., and ALFRED MATHIAS. **2s.**

"An excellent introduction to the fundamental principles of Mechanics, Hydrostatics, and Heat."—*Educational News.*

Science, Junior Experimental (Physics and Chemistry). By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. *Second Edition.* **3s. 6d.**

"The explanations are clear, and we can recommend the work heartily."—*Secondary Education.*

Sound and Light, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **5s.**

"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary Physics."—*Nature.*

Sound and Light, Junior. By JOHN SATTERLY, D.Sc., M.A. **3s. 6d.**

"Reaches a high standard, with plenty of practical work."—*Guardian.*

PSYCHOLOGICAL TESTS FOR GENERAL INTELLIGENCE.

By CYRIL BURT.

A SIMPLE method of testing intelligence is a practical requisite. It is needed both for the administration of an educational area and for the organization of the single school. In advancing children from class to class within the same department, in advancing them from the infant to the junior department and from the junior department to the senior within the same school; in transferring them from one school to another, from the ordinary elementary to the central or the secondary, or to the schools for the mentally defective—in each process the one essential consideration is the intelligence of the individual child. How is such intelligence to be gauged?

Commonly, of course, and to a large extent justly, the child is judged by his performance in school examinations. It is the aim of such examinations to test knowledge acquired, and power to apply that knowledge, and also, in a fashion less direct, to test power to acquire knowledge and power to retain it. But something more is needed. Attainment is a poor measure of capacity, and ignorance no proof of defect. No matter how uniform a class may appear at the beginning of a term, by the close of it a few will have forged far ahead of the majority, and many will lag behind. The junior county scholarships are awarded to those who prove most proficient in an examination consisting principally—indeed as a rule entirely—of a paper in English composition and a paper in arithmetic of a problematic rather than a mechanical order. Recent investigation has justified this traditional choice. These two are, in fact, the subjects which correlate most closely with general intelligence. Despite the efforts of the examiner, however, it is inevitable that, in setting a written paper to children at the age of ten (who, perhaps, only left the infants' school, where little paper work is given, at the age

of eight), novel acquirements are tested quite as much as original ability. The cleverest child, who, by some accident or oversight, has not been speedily thrust on to Standard VI of the elementary school, will miss his scholarship to the secondary school; and a well-coached precocity may secure it in his stead. Popular criticism of contemporary education is replete with instances of the undetected genius and the erudite fool; of school incompetents who succeeded in after life, and youthful prize-winners who could never earn a living; dull boys who became brilliant men, brilliant scholars who became criminals, lunatics, or paupers.

School and scholarship examinations, therefore, yield but precarious estimates. Has the psychologist anything better to offer? To measure mental capacities, as distinct from mental attainments, the psychologist has devised the mental test. By its means he has demonstrated, as he believes, that all mental performances depend upon capacities of two orders—general and specific. The child who excels in one task tends, more or less, to excel in all the rest. Hence, it is inferred, all our activities are permeated, and largely determined, by a single, central, fundamental factor. This factor is commonly termed "general intelligence." Experiments have suggested that it is also—in part, at any rate—hereditary. It may, therefore, be defined as inborn, all-round mental efficiency. But operating over and above this general factor are discernible certain special aptitudes, capacities limited in their application to particular tasks or to particular kinds of tasks—manual, linguistic, arithmetical, musical, and so forth. These doubtless depend in part upon congenital factors, and in part upon acquired training and accumulated interest. But in their nature and number they are obscure.

Of all these various capacities, both general and specific, the most significant is manifestly intelligence. It is for the measurement of intelligence that tests have commonly been invented and used. Mental tests have been chiefly developed and most extensively employed in America. But in origin they are essentially English. The measurement of individual mentality was first elevated from a discredited pretension of palmists and phrenologists into a method of scientific precision by Sir Francis Galton.

The mental test, like the clinical thermometer, is of little use without expert interpretation. Teachers are, or ought to be, such experts; for to make psychological examinations, to pronounce judgment upon mental capacity, is part of a teacher's professional duty. But they must not expect the test to supersede the need for insight and experience. A simple scientific invention may enable the layman to accomplish much that before was possible only to the expert. But its use must always be mechanical, and its scope confined and limited. Put into a child's hands a pair of compasses, and he will describe circles Giotto might envy. Yet no one, unpractised in drawing, but equipped with this contrivance, would expect forthwith to delineate the faithful portrait of a man.

Psychological tests are required for two especial purposes, to eliminate the subnormal and to promote the supernormal. The discovery of the subnormal child has become a compulsory duty since the passing of the recent Acts dealing with mental deficiency. The duty is harder than the Acts imply: no sharp line separates the imbecile from the feeble-minded, the feeble-minded from the dull and backward, or the dull and backward from the mediocre or average. They merge into one another by insensible gradation, like the colours in a spectral band. The line of separation between defectives and normals is as arbitrary as the line dividing orange from red. Hence, near this border-line, the most careful judgments are needed.

To discriminate the high-grade defective from the low-grade normal, the tests now most generally in use are those popularly associated with the name of Binet. The Binet scale has, in its general character, adopted the method so commonly exploited in interviewing candidates for almost every purpose—the method of an oral interrogatory. In one or two instances only do the tests appear to be tests of performance rather than of reply, of doing rather than of saying. The main improvements of the scale spring from two sources.

First, the questions are fixed beforehand; and, secondly, they are graduated according to age. The examiner asks the child his name, his sex, his age—questions that an average child can answer at three, four, and five years respectively; he requires the child to repeat certain numbers or sentences, to compare certain lines or weights, to name certain coins, to define certain terms, to solve certain problems of practical life; and, according to the number of correct answers, he measures the child's intelligence. There are five such tasks for nearly every year of school life, and, according to his answers, a child can be assigned a certain "mental age." A child of ten who answers only the questions for a seven-year-old is said to be backward by three years, and stands on the very border-line of mental deficiency. A child backward by more than 30 per cent. of his age is to be considered definitely defective.

The Binet scale was based upon experiments carried out in Paris. In Italy, in Germany, in Russia, in Sweden, in Turkey, and in Japan, translations and adaptations have been drawn up; and in America, versions, revised and unrevised, have been published almost beyond count. Recently, in the elementary schools of London, a co-operative attempt has been made to standardize the scale for English children.

Despite its wide use and technical simplicity, the Binet scale, as is now generally admitted, lies open to several serious criticisms. Many of the tests are scholastic, most are linguistic, and none have been proved to possess a close correlation with intelligence itself. The tests for younger children are much too easy; those for older children a little too hard; while for supernormals and adolescents there are practically no tests at all. No one could award scholarships by means of the Binet scale.

Many of these defects, however, can be remedied. The "Point-Scale Method," as one American version is called, has discarded all but the best twenty tests, and marks the child by "points"—so many units for such and such tests—rather than by a fixed and fallible scale of mental years. Another version, the "Stanford Revision and Extension," has added ingenious problems for higher levels and for older ages. "Suppose a ball lost in a round field: what path would you take to find it as surely and as quickly as possible?" "Suppose you had a three-pint vessel and a five-pint vessel, and no other: how could you measure out exactly seven pints?" And upon somewhat similar lines, it is reported, the scale of intelligence is being extended, so that undergraduates for a University like Columbia may even be classed and selected by its means.

In this country, however, investigators have preferred to begin by testing the tests. Using a statistical device contrived by Sir Francis Galton, the method of correlation, and by its means judging each test according to the resemblance of its pronouncements to those of careful observers watching the pupils tested over a period of many months and years, English psychologists have endeavoured to determine which mental function has the highest diagnostic value. The results have been most suggestive. Galton himself believed that simple tests of sense-perception might furnish trustworthy estimates. In discriminating differences of weight, fellows of the Royal Society, he found, far surpassed the average man. Later observers recommended simple tests of speed of movement—tapping tests, reaction-time tests, and so forth. At Oxford, experiments showed that a combination of both processes, sensory and motor, into something more involved would yield results remarkably superior; indeed, the more complex the test, the better the estimate. Best of all appear to be the tests of reasoning.

Reasoning seems the highest and completest manifestation of intelligence. The problems set should require no special knowledge, whether of facts or of method of manipulation. They should be problems, not in arithmetic or science, but in matters of everyday life, at once familiar and interesting to the child. For example: "Jim runs faster than Tom; Tom runs faster than Jack. Who is the quickest runner?" Such a question can be answered by an average child of seven. "If the train is late, he will miss the appointment; if the

train is not late, he will miss the train. We do not know whether the train was late or not. Can we tell if he will miss his appointment?" Such a question can be solved by an average child of twelve. To devise a graded series of such problems, ranging from the simplest logical syllogism up to a brief but intricate detective story, would be no arduous undertaking.*

Though too difficult to apply to border-line defectives, such a series gives excellent results when employed to detect supernormal ability among older children, for example, to select candidates for central or secondary schools at the ages of ten to thirteen.

Before the war little had been done to determine the applicability of intelligence tests to adults. But in 1917 the American War Department established a psychological division within the medical section; and prepared, by means of standardized tests and a large corps of personnel officers, to test the abilities of every recruit at the rate of two thousand a day. The tests were of two kinds: first, a series of written tests, which could be applied and marked almost mechanically upon a large scale, for men both literate and illiterate, both English-speaking and foreign; and, secondly, a series of oral tests based largely upon the Binet tests. The objects of the scheme were manifold. To discover men of superior intelligence for promotion as officers and admission to special duties; to eliminate men whose intelligence was so meagre as to render them a burden to the service and a menace to their fellows; to form organizations of equal, or uniform, or superior strength according to special needs—these were some of the purposes in view. And the aims were admirably fulfilled.

For rough approximations, the men were graded according to the merits of their performances into about seven or eight groups: A, B, C+, C, C-, D, D-, E. The officers averaged between A and B, the sergeants between B and C+, the literate enlisted men C, the illiterate D. In the various arms of service there were, of course, wide variations. Among the men it was found unsafe to include D or D- individuals in the field artillery, in machine gun battalions, or in field signal battalions. Among the officers, of those in the engineer groups 79 per cent. were A; in the veterinary groups only 8 per cent. Perhaps the most interesting result was a grading of different occupations in order according to the average degree of intelligence displayed by the individuals following them. The occupations, numbering between seventy and eighty in all, range from general labourers, cobblers and miners (averaging C-) through farmers, ostlers, barbers, bricklayers, cooks, bakers, blacksmiths, carpenters, butchers, plumbers, chauffeurs, policemen, telephone operators, electricians, musicians, clerks, mechanical engineers, nurses, typists, accountants, civil engineers, and medical officers—arranged thus in ascending order—up to army chaplains and engineer officers, the last two averaging A.

What has been attempted during the war can be repeated during peace. It is manifest that industry would gain, and that in no small measure, if, in place of the current plan or planlessness of engagement upon probation, the scientific principle of selection according to tested aptitude could be applied to civil occupation as it has been to military duties.

Since hostilities have ceased, the interest in vocational psychology, nascent in America before the war, has, upon an ever-growing scale, been cherished and developed by the widespread call for increased production. In England a special section of the British Psychological Society has recently been formed to discuss this and cognate problems; and proposals have already been suggested that such Universities as those of London and Cambridge might even establish an institute of industrial psychology.

We need a survey of our psychological resources: a census not of man-power so much as of mind-power. Nowhere can such a survey be so readily commenced as in our schools.

* The reader will find a standardized set of such problems, arranged for every age from seven to fourteen, in the issue of the *Journal of Experimental Pedagogy* for June, 1919.

As each child leaves his school, his teachers or masters should be able to furnish him—or his parents, or his employers, or his future teachers—with a scientific statement of his special and general qualities both of intellect and of character, expressed not in the vague and laudatory phrases of a well intentioned testimonial, but described, and where possible measured, with all the accuracy that psychological technique can bestow. Only by such means can we find the right place for every man, the right man for every place.

SCHOOL EDITIONS OF THE CLASSICS.

By W. B. SEDGWICK.

IN spite of all the discussions of recent years with regard to the value of the classics, their place in the curriculum, and the aims and methods of classical teaching: in spite of the multiplication of textbooks and editions to an extent which is bewildering, the classical master looks in vain for any improvement in modern textbooks at all commensurate with the expectations aroused. I propose to set down with all diffidence, knowing I shall be addressing many older and better teachers than myself, certain suggestions which have occurred to me on the subject of editions of the classics. My object is simply to direct attention to a subject which seems to have been overlooked.

I think it will be conceded that the majority of recently published elementary editions are needless. For instance, many new editions of Caesar are actually inferior to the old; their chief recommendation often enough is simply an improved format and numerous illustrations. The introductions are generally good; but probably any classical scholar who has taught Caesar for a year or two could produce something similar in a few hours without much exertion. The notes are too often haphazard. Really difficult passages are constantly left unexplained, while dissertations are included on *quominus*, or the gerundive, which could be found better explained in any good grammar. Again, the explanations often do not really explain; they fling at the pupil a scrap of translation with a casual remark, but nothing which appeals to his reason. But this introduces a new topic.

A boy is so constantly discouraged in his efforts to bring reason to bear on his notes that it is small blame to him if he finally gives up in despair, and comes to regard his notes as a sort of "crib," and learns to recognize the bits of translation by the inverted commas. The result is that the boy is left entirely to the master—an excellent thing if the master is efficient, but otherwise the Caesar lesson becomes the dull grind it so often is.

But surely the War has taught us that Caesar can be made a living thing to a boy. Let the pupil see that "Caesar" was written by a real general about a real war, and he will enter upon it with interest. In this respect Rice-Holmes's edition is a godsend; it gives us adequate maps, the topography is properly explained; difficulties are frankly recognized and seriously dealt with. The boy, moreover, is treated as a rational creature, and rightly considered capable of appreciating a controversial point.

Turning to vocabularies, the chief defect is that too many of them give only the meanings occurring in the text, however exceptional or unconnected with the ordinary meaning these may be. Here again there is no attempt to arouse a boy's intellectual powers; all the information imparted is about genders and genitives—obviously for the purpose of committing to memory. What connexion can there be between these dry and meagre scraps of indigestible information and all the fine talk about the value of classics as an intellectual training? Is the only way of imparting a "living interest" to the classics to make our school editions into badly chosen photograph albums?

With regard to the exercises for retranslation which form a feature of many modern editions, it is often found that they

are too easy to be of much use except for *viva voce* work. If well done, such exercises should be invaluable (much better than "Lists of Idioms") for enlarging a boy's vocabulary and store of idioms, and improving his style generally, though one may doubt whether the old Elizabethan way of letting the boy make an idiomatic written version and retranslate it is not better. In any case, there is no reason why this feature should be confined to elementary books. How many editions of (say) a speech of Cicero have such exercises?

What, then, should be the character of the ideal school edition? Something like the following may be suggested. The introduction should aim at presenting the author and his subject in the most vivid way. The pupil, as a rule, has plenty of intelligence, but is astoundingly ignorant. His intelligence should be stimulated and his curiosity aroused; he must be told what to look for in his author, who should be put in his true historical perspective. Mere dates and historical facts are not enough. A little literary criticism will do no harm. A model of its kind is Page's introduction to Virgil, though it is intended for rather older boys. "Yes," it will be said, "this is all very well, but the boys won't read it." Of course they won't—the master must read it with them. This is essential: at this stage the boy has no ideas at all worth mentioning about the ancient world, unless he has been exceptionally fortunate in his early teachers. But a well written introduction would form material for about half-a-dozen most interesting and valuable lessons. "But they won't get any questions on this at the 'Locals'!" This is unanswerable. One can only say: (1) That they *should* get such questions at the "Locals"; (2) that examining bodies should encourage the choice of unseens rather than of set books; (3) that otherwise such examinations have fatal effects on the teaching of classics, and do far more harm than good.

The text should have in every case a few selected critical notes. A few editions already have. In spite of frequent assertions to the contrary, boys *can* be interested in "various readings," and nothing is more valuable for sharpening their critical powers, and often for training their literary judgment. Later, in the case of verse authors, questions of text may do more to make a boy appreciate the more subtle poetical beauties of his author than anything else except actual verse composition, which for most boys is out of the question.

With regard to notes, there are these alternatives: the principle of the fewest possible notes, leaving the bulk of the explanation to the master, and the principle of explaining all reasonable difficulties. Now, the advocates of the first method prefer to explain points orally and then dictate a note; but probably in nine cases out of ten a note thus dictated will coincide substantially with that of an ordinarily efficient edition. If so, it seems a waste of time to dictate it, apart from the probability that the editor of a text will have a better knowledge of his author than the average teacher. Nor need one admit that the advocate of more copious notes takes less trouble in oral explanations. On the contrary, he has in the printed note a text which he may amplify, explain, or criticize, as the case may be, while there is nothing to prevent him from supplementing the printed by a dictated note.

This being the case, I do not hesitate to defend the old system of fairly copious notes, merely remarking that care should be taken to get the best editions, and that the most valuable notes should be carefully marked by the pupil. The editor's duty will be to see that he honestly explains all real difficulties—if possible, giving the pupil material to form his own judgment. It is not at all fatal to err on the side of excess. The real waste of time is that a boy should spend an hour floundering about in a hopeless muddle, when a word would set him right. If it is objected that this method makes the lesson too easy and minimizes mental effort, it may be replied that it is the editor's business, as well as the teacher's, to see that this does not happen.

A word about more advanced editions may be added. I assume that when a boy has been studying classics for about three years, he should begin to try to get (1) a general knowledge of ancient history, antiquities, and literature; (2) a sense of style; (3) power of grappling with detailed points

of grammar and criticism; (4) a comparatively minute knowledge of the most important authors or of parts of them.

It will be allowed that it is better that this knowledge should be got from texts actually read—or at least based on them—than from dictionaries and compendiums. If so, the following method may be suggested. A boy's reading may be divided into two parts: books "to be tasted" and those "to be chewed and digested." The first class includes books which must be read, if knowledge is not to be too restricted and one-sided; the second, those which are of primary importance as literature, such as Virgil, Horace, Livy, the Greek Drama, Homer (Herodotus, Catullus?), and particularly those on whom the boy's style is to be formed,* in which I include only Caesar, Cicero, Thucydides, Demosthenes, and Plato.

Now, in the case of the authors "to be tasted," much more should be read than usually is, but the difficulty is that there are few suitable editions in English, though there are many in French. For instance, I should like an edition of Lucretius, with a full introduction, like Lee's or Merrill's, and a selection of the best passages—and perhaps one or two of the worst—something like Dymes's in English, Pichon's in French. If a boy read rapidly on this plan 1,400 to 1,500 lines (which would include all the best), he would have a much better knowledge of Lucretius than one who had spent twice or thrice the time on Book V only (an equal amount), as is usually done.

This plan might be extended to many authors. The names suggest themselves of Pindar (*vide* King's "Myths of Pindar"), Thucydides, Herodotus, Attic Orators (Jebb), Plato (though one whole dialogue should be read, not a very early one), the "Hellenica" (for style), Theocritus (Lucian, Plutarch, some Aristotle?), Plautus (most plays would gain by drastic excision; anyhow, let us drop the dull "Trinummus"), Terence (?), Lucretius, Catullus (expurgation here is nearly enough), the Elegiac Poets (very little), Horace, Virgil, Livy, Tacitus, Juvenal, and Cicero's Rhetorical and Philosophical works, which contain easy and delightful pages of magnificent Latinity.

What is most needed is a book of copious selections, with a good, long introduction (which would really *introduce* a boy to his author), of which the text would be a series of ample illustrations, short notes (consisting chiefly of brief helps in hard places, references to the introduction, and cross-references), with a good index collecting examples of the topics treated of in the introduction and notes. If the help in the notes were judiciously given, not only could much larger portions be read in class, but a boy could read on his own account with profit and pleasure.

In the few cases where a book is to be thoroughly digested, nothing but the best is good enough for the schoolboy. The mind of a well taught boy is astonishingly receptive and "soul-hydroptic with a sacred thirst," and seed sown in youth returns after many days. (It is assumed that a boy with no taste for literature will have dropped classics by this time.)

This is the time when the young scholar should lay the foundations of his scholarship and acquire the various kinds of learning enumerated, as expected from one who begins to read for Honours at Oxford or Cambridge. School editions are well enough in their way, but a boy by this time wants more, for countless avenues are opening out to him in all directions. It is essential that there should be at least one copy of the great editions accessible to him. The master will read out, explain, and discuss the most important points, but the boy should learn to quarry for himself, and, above all, to cultivate independence of thought, "*nullius addictus iurare in verba magistri*." For the value of this training is not so much in information gained as in the acquisition of scholarly habits, and in knowledge of the methods of great scholars rather than of their conclusions.

Therefore, to take Homer, after a boy has read a book or

* I should like to put in a word for using prose authors instead of verse for repetition; the passages should be fairly simple and *typical* of the author—not "purple patches."

two of the "Odyssey" as rapidly as possible, give him Leaf's "Iliad," with Monro's Introduction or Jebb's Handbook. Let him go through at least Book I point by point; legitimate hiatus, the meaning of αἶολος, the spelling of νῆδυμος, the readings of Aristarchus, and so on. By all means let him use "Lexilogus" if it is accessible, for there could be no more valuable lesson in method. Then let him forget it all, if it so chance; but he will have had a lesson in scholarship, and literature too, which he will never forget. Nor will he love his Homer less.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

A word of greeting with the New Year, greeting not empty, but full of kindest meaning, to our brethren beyond the ocean—to those whose business is with the school as teachers or administrators—to those who see in the spiritual concord of America and Britain a sure guarantee of peace and progress for humanity, and seek to promote that concord by the early removal of prejudices, by the mutual study of institutions, by co-operation in the furtherance of education and scientific research. What do statesmen, diplomatists, or senators matter if the two hearts of the nations beat as one? May the New Year make even more than the Old for Anglo-American unity!

Let us glance back on education in the United States during the last twelve months. Under the date, March 28, the Commissioner of Education wrote:—

**Non vanam
portantia verba
salutem!**

"America inherited most of the content, form, and spirit of the education of its schools from Europe; but from Colonial times until now there has been an ever-increasing tendency to adapt these more closely to the needs of life in America and to the American spirit of service. This tendency has been given unusual impetus by the exigencies of war through which we have just passed, and of readjustment through which we are now passing." For America the education that will make Americans! Tendency is exhibited in two ways: by measures that find a place in the Statute-book and by movements towards reform. The trend of legislation may be illustrated from the State of New York, whose Legislature passed three significant measures in 1919: (i) a compulsory continuation-school law, to become operative in 1920; (ii) an illiteracy law, dividing the State into zones for the more effectual dealing with illiterate adults; and (iii) a salary law, increasing the pay of teachers throughout the State. Continuation, the reduction of illiteracy, an improvement in the status of the teacher—these are now prominent objects of American schoolmen. Turning to movements, we signalize as important that for extended physical education. During the war, military statistics revealed grave deficiencies in the national health; on the other hand, the training camps proved able to convert "the flabby into the robust, the lackadaisical in spirit into the exuberant" (*The Dial*, September 20). The defeat of military training in schools by the peaceful minded must not be allowed, it is urged, to carry with it the defeat of all organized physical training; and what the camp could do the school must do. To achieve this result through compulsory measures in the public schools, the Playground and Recreation Association of America has established a national physical education Service to spread enlightenment and to stimulate legislation. Another interesting movement relates to language. November was marked by an American Speech Week—a celebration intended primarily to develop a strong public sentiment for a common speech that shall be at once clear, pleasant, and forceful (*The English Journal*, VIII, 7). It is a reform in which Britain might well collaborate with America; only we must first lay aside the notion that the particular dialect of English dominant in England is the one standard of correctness and hall-mark of gentility.

Progress in the United States is mainly in the field of organization: in the organization, for example, of the junior high school. Or it affects methods and curriculum. Thus, the General Education Board has lately appropriated 16,000 dollars for the use of the National Committee on Mathematical Requirements, which will study possible improvements in the mathematical curriculum of secondary schools. But organization and curriculum cannot be detached from the general theory and philosophy of education, in which domain it seems that America lacks an inspiring leader. In the *Educational Review* (LVIII, 5), President Butler, who now, after twenty-nine years of service, lays down the editorship of the

Review, laments that, since the death of William Torrey Harris, "American education has had many conflicting voices, but no clear dominant note of leadership," and he speaks contemptuously of the prevailing "parodies on educational philosophy." Perhaps in this same domain England likewise needs some Master having knowledge, imagination, and intellectual power. We want instruction how the new "education to democracy" is to be also education to the highest development of man.

FRANCE.

There are Bills, such as Mr. Runciman's of 1912, which remain Bills, and there are Acts which will not act, or are not put into action. Whether the Bill lately introduced by MM. Pierre Rameil and Pierre Laval into the French Chamber becomes operative or not, it is profitable for instruction and as an indication of sane tendency. Its title is *Proposition de loi pour le droit intégral du peuple à l'instruction*. Now, *droit intégral* to education is a thing different from a right to *instruction intégrale*, and the French Bill, applying what we have called the Doctrine of the Sieve, would search the whole mass of the people for the best instruments of social service. The war, says the *Exposé des motifs*, has decimated the *élite* of French youth, which now must be recruited from the proletariat, that eternal source of national renovation. In the fierce competition about to begin among nations, France, through the insufficiency of its birth-rate, will not have the advantage of numbers; the more reason that it should have the advantage of quality in its citizens. The principle that should be followed is that of Condorcet: to prepare every man for the social functions to which he has a right to be called, to develop the talents with which he is endowed to their full extent, and so to establish a real social equality. How is that principle to be put into practice? Let us set forth the proposals of MM. Rameil and Laval as succinctly as we can.

Under their Bill, at the end of the school year in which he has completed his twelfth year (or earlier in the case of those with an unusually good school record) every pupil, boy or girl, of a public or a private school is bound to undergo an examination for passage to secondary education. The results of this examination will be determined by (i) the school record of the pupil, as exhibited in a *livret scolaire*; (ii) tests prescribed by the Minister of Public Instruction to discover intellectual development; and (iii) tests of experimental psychology, calculated to ascertain as exactly as possible the natural aptitudes of the pupil. The Examining Board will comprise a representative of primary education, one of secondary, and one of technical education. Every successful candidate will receive the title *élève de mérite*, pupil of merit. Such pupils will be divided, according to the circumstances of their parents, into two classes, paying pupils of merit and scholar pupils, the former holding the title as an honour, to the latter being offered a national scholarship (*bourse nationale*). The scholar pupils (*élèves de mérite boursiers*) will be assigned, according to the wishes of their parents, their own aptitudes, and the social demands of the moment, some to secondary schools, others to higher primary schools, and others again to technical schools. In case of need, the parents of these will receive an allowance to compensate them for the temporary loss sustained from the fact that their children do not engage at once in remunerative work. The scholarships are tenable only in State schools; both State and private schools will continue as now to offer secondary education to paying pupils, successful in the twelfth-year examination or not.

There is a continual use of the sieve; for a non-paying pupil of merit may lose his title at the end of any year if his work in it has been unsatisfactory, and in like case the scholar pupil may forfeit his scholarship or be transferred to a different class of school. Again, the sieve is not a mere examination: there is to be a repeated probing by various means of aptitude as well as of attainment. For the first sifting all children must present themselves—the State must have the choice among them all. But how if a poor parent refuses the proffered *bourse*? The prospect of an allowance is an inducement for him to accept. As to finance, free secondary education would be impossible in France, where already a sum of ten million francs a year is disbursed in aid of *lycées* and *collèges*; and the parent willing and able to pay higher-school fees may fitly do so. The scheme is all excellent and worthy of close study in England (Text of the Bill in *L'Ecole et la Vie*, III, 6). For, indeed, wild, uninformed talk has been misleading the multitude. Our Ministers used to speak in one breath of "national education" and "the ladder"; whence the newspapers inferred that every English child was to be converted into

**Measures and
Movements
in 1919.**

proposed.**

**Excellence of the
Scheme; and some
Reflections.**

**Wanted—
a Leader.**

a Master of Arts at the expense of the Treasury. The idea still lingers that all are entitled to *instruction intégrale*—to primary, secondary, and higher education. We say once more that the right of a child, of whatever class, is to the education by which he, with his natural powers and aptitudes, can best profit; and that is the education which it is for the interest of the State that he should receive. It is the task of pedagogy to find nice methods for estimating those powers and aptitudes; it is the business of the State to provide for their development without regard to social rank or wealth.

GERMANY.

At München, Dr. Kerchensteiner, well known in England as the German protagonist of Vocationalism, has resigned office as Schulrat. The pedagogue, Prof. Rein of Jena, still better known here (extracts from his books are now published at Leipzig by Reclam), writes in *Der Tag* (No. 191) of the functions to be assigned to the new Reichsschulamt, or Imperial Bureau of Education. It will examine all questions affecting the whole Empire, such as uniformity of the requirements in examinations and the minimum of attainment to be reached in schools of various classes, will collect statistics, and will promote the establishment of an imperial school museum and a pedagogic library. In Prussia, ordinances of the Minister for Wissenschaft, Kunst, and Volksbildung direct the formation in all schools of Parents' Councils (*Elternbeiräte*), competent to deliberate with and to advise, but not to override, the school authorities; the *Elternbeirat* must be heard, for example, before a boy is expelled, but it cannot prevent his expulsion. This is a wise endeavour to eradicate the old baleful opposition between school and home in Germany. Progressive, too, is the admission of primary teachers to the university. The Students' Committee (*Allgemeiner Studentenausschuss*), in assembly at Greifswald, showed indignation thereat; but they were reminded that they too might now become primary teachers! It is, however, religion that forms the storm-centre in the German educational world. As we said last month, the New Constitution allows schools of three kinds: the denominational school (*konfessionelle Schule*), the mixed or omnidenominational school (*Simultanschule*), and the secular school (*religionslose Schule*). Parents in any school district may demand the opening of a school that will teach in accordance with their views; but no concession will be made that might prejudice the general working of the school system, and minorities will not be permitted to deplete efficient schools. The details of organization will be formulated in a Reichsschulgesetz, or Imperial School Law, now being prepared. Meanwhile there are fierce quarrels between denominationalists and omnidenominationalists, between secularists and the defenders of religion. In every school parents are entitled to withdraw their children from the religious instruction offered; each party alleges against its rivals undue pressure on the parents to exercise or abstain from exercising this right. That a large majority of the German people are for religious education of some sort is certain. Avalanches of petitions in favour of it fell on the National Assembly at Weimar when the question was under debate. In Bavaria, at a recent date, only 490 claims for exemption from the lessons in religion had been made. Yet the Socialists, if they yield for the moment to the will of the majority, are resolute for the secular school. They talk of Sunday schools in which secularism is to be taught. The Independent Socialist, Ernst Däumig, has composed a People's Catechism, to take the place of the Church Catechism, and to inculcate belief in humanity in place of belief in God. Instead of Confirmation, there has been introduced a Jugendweihe, or Consecration of Youth—boys and girls paired enter arm in arm, listen to addresses by Independent Socialists, and eat meanwhile slices of bread as a luncheon! More interesting than such parodies is the just reported decision of Schwarzburg-Rudolstadt to make religious instruction historical.

INDIA.

The Report of the Calcutta University Commission has excited general interest and, as it seems, a large measure of approval. Thus, *Indian Education* (XVIII, 3), emphasizing the advantages that the Commission derived from a knowledge of the younger English universities, writes: "The Commission made its recommendations with the modern English university as a guide and with the conditions and needs of India in view. If these recommendations are applied wisely and not slavishly whenever a university is reformed or established in India, there is no reason why Indian universities should not become strong as seats of learning and wisdom, or why they should not prove a great asset in times of national stress and

strain." A Bill for creating, as the Report advised, a Dacca University (to be a teaching university in the fullest sense and not constituted of affiliated colleges), was promptly introduced. The Government of the Punjab has set up a Committee to consider how far the recommendations of the Calcutta Commission may be applied to the Punjab. Passing from the Report, we note briefly that the Government of Bombay has adopted a policy that will greatly encourage the development of Arts colleges, and that the scheme for a Ceylon University College (to be affiliated eventually to the University of Oxford) is being elaborated. Burma has withdrawn recognition of the London Matriculation Examination as a qualification for Government service.

UNIVERSITIES AND SCHOOLS.

OXFORD.

The question of compulsory Greek at Oxford seems to have reached a critical stage. At the last meeting of Congregation the amendment of the Greek Committee which would have retained compulsory Greek at Responsions for all taking the Honours Schools, except of science and mathematics, was rejected by 123 to 104. Prof. Murray's proposal to include the study of a Greek book in a translation apparently in addition to one of three alternatives, all of which involve a knowledge of the language, was adopted by 166 to 43. Finally, the principle of optional Greek for all was reaffirmed. The supporters of compulsion intend to call up Convocation, and there is little doubt that that body will reject the present proposal, and we shall all be just where we were at the beginning of the year. There is, we believe, a faint possibility that some further compromise may be attempted—with success, we hope sincerely. It is high time that this important question was settled. Not only the public but many State-aided secondary schools are interested in the matter. Pupils in the latter schools are now practically compelled to follow curricula arranged under the Board's Regulations for Advanced Courses if they stay at school, as they ought to, until they reach the age of eighteen. Unless the advanced course is classical in character it is in practice impossible to arrange for any Greek. Under the old regulations, therefore, the best pupils in these schools are discouraged from thinking of Oxford at all unless they intend to take classics. The amendment of the Greek Committee would have admitted the science students, but not the modern studies people. The majority of teachers in these schools are in favour of more latitude in the choice of subjects demanded for entrance to the Universities, provided, of course, that a balanced general education is demanded. But the Greek question is only part of a larger—the relation between the Board's courses and the regulations for entrance and for scholarships at the Universities. At present there is opposition between the two, and, in the interests of Universities as well as of the schools, the whole question should be considered and an agreement reached.

A statute is to be introduced next term by which a Delegacy for women students is to be established at Oxford; women are to be allowed to matriculate and to take degrees; they will become members of Convocation and be qualified to act as examiners, &c. If this statute be approved it will be followed by others qualifying women to be members of Congregation, to be elected to the Hebdomadal Council, and to sit on Boards of Faculties.

MANCHESTER.

The University of Manchester is finding, like all other Universities, that greater demands are being made upon it than it can meet. It is therefore making an appeal for £500,000 for general purposes and for £150,000 for an addition to the buildings of the College of Technology, which was the first of its kind in England, though the Imperial College of Science and Technology is considerably larger. The Manchester College is, however, filled to overflowing, and the site on which the extension is to be erected has already been purchased, and it is stated that it will double the accommodation for students and more than double the facilities for industrial research. The appeal has been commended by many of the leaders of the textile, engineering, and chemical industries in Lancashire, and £70,000 has been promised already. The £500,000 needed by other departments of the University may not offer the same prospects of immediate gain, but, in the long run, it will prove to be quite as good an investment for the nation. The appeal is recommended to everyone who is interested in the development and extension of University education, whether in Manchester or elsewhere.

(Continued on page 34.)

THE NEW ASTRONOMICAL MODEL.

Specially designed for use in Schools and Colleges by WILLIAM WILSON, M.B., C.M., F.R.A.S.

STRUCTURE.

MATERIALS EMPLOYED.

Polished Steel, Lacquered
Brass, Mahogany Wheels,
Cast Iron Tripod, Papier
Mâché Globes, Cloth Dial.

SIZE OF MODEL.

Cloth Dial, 3 ft. 6 in.
diameter.
Earth's Orbit, 3 ft. dia-
meter.
Globes, 6 in., 4 in., and
1 in. respectively.

WORKING.

The Initial Motion (earth's yearly revolution) is given to the Model by the hand on the Balance Weight, and from this Initial Motion all the other motions are derived automatically.

Educational capabilities of the Model—Motions reproduced—Phenomena demonstrated—Public demonstrations given—Letters of appreciation received, &c., &c., will be found in *The Journal of Education and School World*, Dec. 1, 1919, p. 813.

THREE FEATURES OF GREAT PRACTICAL IMPORTANCE

in relation to the use of the Model in Schools.

Fig. 1.

Fig. 2.

Fig. 3.

1. **The Model when not in use** occupies very little space (an important consideration in any school) as the principal part of the apparatus is entirely separate from, and merely stands on, the underlying base. The Model can easily stand in any ordinary book case or cabinet, from which two shelves have been removed (see Fig. 1), as the space it occupies is only 36 in. long by 28 in. high by 10 in., from back to front. The base can stand behind the Model in the Cabinet, or hang in its entirety on the wall, or be taken to pieces and its constituent parts (see lower part of Fig. 2) be placed with the Model in the Cabinet.

2. **The Model in portable case for conveyance by hand.** The conviction has often found expression (and by no one more confidently than by the Chairman of the Books and Apparatus Committee of the L.C.C. Education Board) that the Model is just as much needed for Elementary Schools as for Secondary, since most of the Phenomena it demonstrates are concerned with facts which should be understood by all, and which the use of the Model renders easily intelligible to any boy or girl. If the Model is thus to be extensively used in Elementary Schools, their very large number will probably necessitate Education Authorities allocating one Model for the joint use of a group of schools. Such a requirement is fully met by the use of the portable case (Fig. 2) carried by a handle at each end, and weighing, with the Model and base all complete, about 60 lb. The Model has thus been conveyed on over 50 railway and 100 taxi journeys without the slightest harm accruing.

3. **The Model as packed for safe transport by sea and land.** The whole of the mechanism at the Earth end of the Model is detachable *en bloc*, and in this condition is packed in an inner case by itself, as shown in Fig. 3. This inner case occupies the lower half of its containing packing case, and allowance is made for an inch of wood-wool packing above and below and on all four sides. It is separated by a false bottom from the upper half of the case which contains the other parts of the Model, securely packed, and where desirable bolted in position. Perfect safety in spite of possible rough handling during transport is thus secured.

For full particulars see the 16 page Illustrated Pamphlet, post free 6d., obtainable from—

Dr. WILLIAM WILSON, 43 Fellows Road, London, N.W.3.

For forthcoming Demonstrations see page 67.

GENERAL.

The chief educational proposal of the British programme for the celebration of the "Mayflower" and the "Pilgrim Fathers" tercentenary, to take place next year—for which the Anglo-American Society is responsible—is as novel as it is valuable, namely, that a chair in American history, literature, and institutions should be instituted to promote these studies in all British Universities. It is not suggested that this chair shall be attached to any particular University; on the contrary, the scheme provides that it shall be held for one or two years only, alternately by an American and a British scholar or public man. The need for some such chair will be understood when it is pointed out that a readership at King's College, London, is at present the only form of teaching and study of the English-speaking American community of one hundred million people. The Society appealed for £20,000 for the endowment. Sir George Watson, Chairman of the Maypole Dairy Company, has given this sum, and the readership will bear his name.

Manchester is not the only University appealing for financial assistance; scarcely a single English University, thanks to the congestion due to the abnormal influx of students and to the increased demand for educational facilities, can pay its way. London in particular is feeling the strain. University College is asking for £100,000 to reconstruct and re-equip its engineering buildings, and King's College is in urgent need of new engineering laboratories. The actual cost of these, amounting to £5,000, is being borne by the London County Council; an old student has given £2,000; and, finally, the Government are being asked to make an annual grant of £2,000 towards upkeep. Oxford receives £30,000 from the Government Emergency Grant, and is already distributing it. Science in one form or another takes a large part; the Bodleian Library, £1,000; and the School of Geography, £750. The Vice-Chancellor of Liverpool University, while congratulating his Court on the fact that the end of the war found them with a deficit of only £2,000, was, nevertheless, forced to add that he foresaw the need for an expenditure of at least £1,000,000 during the next five years, the most urgent matter being a new chemical laboratory which would cost £200,000.

WALES.

The Departmental Committee who are inquiring into the organization of secondary education in Wales have taken a novel course to elicit the opinion of the public on the educational problems

Conferences on Education.

arising out of the recent Education Act. Instead of being satisfied with the ordinary procedure of collecting evidence and examining witnesses, they have also arranged a series of conferences in different parts of Wales. Two have already been held, one at Cardiff, and the other at Rhyl, and it is proposed to hold two more, at Swansea and Carmarthen. There is a great deal to be said in favour of this plan, as it creates interest in educational problems among the public and also gives the Departmental Committee a truer insight into the opinions of Wales as a whole. The existence of the Central Welsh Board at once tends to differentiate the problem of organization in Wales from that which England will be called upon to solve. The main question which the Departmental Committee will have to decide is not only how far Wales is to preserve its educational autonomy in the future, but also whether the recognized and unqualified success of the experiment during the past twenty-five years does not justify an extension of our powers of local control. All other matters are in reality subsidiary to it, and therefore the chief attention of the Conference should have been focussed upon it.

At the Cardiff Conference, unfortunately, Sir Isambard

The Cardiff Conference.

Owen, who had been delegated to discuss the constitution and powers of the new Central Education Council for Wales, hardly touched upon them, so that the afternoon conference was singularly unproductive and unenlightening. His address on commercial education was no doubt well thought out, but, as it had no relevancy to the matter in hand, it made but little impression on the conference. The subsequent speeches, however, showed quite clearly that there exists a strong body of opinion in favour of retaining and even extending our educational autonomy, though the majority of them lacked definiteness and therefore, we fear, gave the Commissioners but little guidance. Mr. Lleufer Thomas had some interesting suggestions in his paper on the National Library and the National Museum, in which he outlined a scheme for circulating books and objects among the schools in order that the advantages of these institutions might become more widespread. Dr. Hoyle, the Curator of the Museum, on the other hand, described this plan as "a pernicious heresy!" In the morning session the discussions, on the whole, were more relevant and fruitful. It was encouraging to note how the Labour

representatives displayed a genuine enthusiasm for secondary education, and how, contrary to the general opinion, they condemned too much specialization and emphasis on vocational training, and rightly insisted on a broad foundation of general culture in the schools. But the conference failed to arrive at any definite scheme of differentiation of types of schools, as it was evident that there was much divergence of opinion on the question. Dr. Stanley Watkins made valuable suggestions as to the linking up of our system of education with English and Continental systems, advocating the formation of a central body whose duty it would be to collect opinions and data on all educational questions. This plan seemed to commend itself to the conference as a whole, and no doubt when larger questions are settled an attempt will be made to give effect to it.

At the Rhyl conference Sir Harry Reichel gave a valuable history of the development of our intermediate education, from the passing of the Act of 1889, and, in the course of his address, referred to the mischievous effect of dual control and the danger of over-organization. Neither of these dangers was apparent when our secondary system was started. Of the two, he regarded the second—over-organization—the more formidable mischief because it was more insidious. Mr. J. C. Davies, Director of Education for Denbighshire, dealt with the question of local administration, which, he said, had become exceedingly difficult under present conditions. The only solution for it is in a combination of several counties, as a wide area is essential for effective work; and, generally speaking, all the speakers were in favour of reducing outside interference with our educational work to a minimum and of strengthening our grip upon it.

The half-yearly meeting of the Central Welsh Board was held at Chester on December 4. Chief interest centred on the "case" which the Board had prepared for the Departmental Committee, though the memorandum prepared by the Executive Committee was approved with but few alterations. The memorandum contained a fairly exhaustive summary of their activities from their inception, showing how greatly their work had increased during this period. This record of progress, they claimed, fully justified them not only in asserting their right to the maintenance of their present powers but also to an extension of their responsibilities. All forms of education, below the University stage, should be controlled under a single body, otherwise such questions as differentiation and co-ordination become practically impossible of a satisfactory solution. This assertion of their claims naturally tends to bring them into conflict with the Welsh Department, but the Central Welsh Board do not indicate how the relative positions of the two bodies can be best adjusted. This is wisely left to the Committee of Inquiry—though the memorandum asks that a certificate from the Board should be regarded as sufficient not only for the Treasury grant, but also for all other Government grants. There was also a short but rather animated discussion on the future of the Junior Certificate. Lord Sheffield was strongly in favour of its retention, but the Board finally approved of the recommendation of the Executive Committee that no school will be allowed to present candidates at this stage unless it can prove to the Executive Committee that it is desirable on "educational grounds" to retain it. So far about a dozen schools have not sent in candidates for this examination.

Some instructive statistics were presented to the Board showing the condition of the schools. The numbers in attendance, for instance, in the year 1918-19 were 20,274, which represents a total increase of 1,091 over the preceding year. Since 1914 the attendance has increased 42 per cent. It is also interesting to learn that the preponderance of girls over boys has increased during the war. Last year they composed 58 per cent. of the total attendance, and above the age of fifteen there were nearly twice as many girls as boys. The explanation of this fact is probably that more girls enter the teaching profession, which necessitates their attendance at school up to seventeen years of age at least. The report also refers to the great shortage of experienced teachers after the losses caused by the war. There has also been an embarrassing amount of overcrowding in the schools, so that work in the schools generally has been carried on under great difficulties. These two problems are so serious that local authorities should deal with them as urgent matters if our progress is to be maintained.

This Court was also held at Chester, on Friday, December 5. A letter had been received from the Prime Minister stating that the proposals for the reconstruction of the University seemed, on the whole, to fulfil the conditions laid down—that the recommendations of the Royal Commission should be adopted in the main.

TO BE ISSUED IN 37 FORTNIGHTLY PARTS
AT 2/6 EACH.
PART I. ON JANUARY 9th.

The 112 new Plates, each measuring 23 in. by 18½ in., especially prepared and engraved for this Atlas register the high-water mark of map-production. They represent in miniature several hundred thousand of the latest National Surveys of the World, and include also the Special Surveys of celebrated Travellers, Exploring Expeditions, etc. The Territorial Re-arrangements ordained by the Peace Conference are also shown in great detail. With an original

GENERAL INDEX

of over 200,000 names constituting an invaluable and up-to-date Geographical Directory.

The employment throughout the work of a beautiful and scientific scheme of colouring for the representation of physical relief—the first time this costly but most effective means of securing cartographical clarity has been adopted in a World Atlas—satisfies the most exacting requirements of students of modern, commercial and physical geography.

*Full Prospectus of this magnificent work, with a description of the Loose-leaf Binding Case—the first time this convenient principle has been applied to an Atlas of the World—sent post free on receipt of a postcard by the Publisher,
Printing House Square, London, E.C.4.*

He, however, desired a further discussion with the University on some of the points, including finance, and he therefore suggested the appointment of five representatives of the University and five representatives of Local Authorities to confer with him. Lord Kenyon and the three Principals, together with the Chairman of the Central Welsh Board, were appointed to represent the University. It is, therefore, clear that we shall not have to wait long before the reconstructed and reorganized University will be in being.

The position of Latin in the Matriculation Examination was the subject of a special report from the Senate. It claims that the University of Wales has gone as far as any British university in the relaxation of its requirements as regards Latin. At present, for the original requirement of Latin from all candidates, numerous alternatives have now been provided. Latin is, therefore, a necessary subject of school study only as far as it is implicitly required by the regulations for the degree in arts. The substantial question now raised is not whether Latin should be compulsory in Matriculation, but whether the schools should be indirectly compelled to teach it for the students who intend taking the degree of Bachelor of Arts, in which Latin is an essential subject in all British universities.

The University of Wales proposes to confer honorary degrees on the following, among others:—M.A. on

Honorary Degrees.

Mr. Roger W. Jones, the late head master of Pengam School; and on the Rev. D. H. Williams, Chairman of the Central Welsh Board. We are pleased that the University has thought fit to recognize the work of persons who have been engaged so long in the cause of secondary education.

At Cardiff the first joint conference of several educational associations was held. The Association of Technical Institutes, the Welsh County

A Federation of Teachers.

Schools Association, the Assistant Masters and Assistant Mistresses, and the University had sent representatives to it. The draft of the constitution was considered, and the aims and objects of the Federation were discussed. The National Union of Teachers resolved to stand aloof on the ground that their organization is sufficiently wide in scope to include all. Fortunately this did not deter the other associations

from proceeding with the formation of the Federation. Mr. W. H. Bush, of Swansea, is the Secretary *pro tem*.

SCOTLAND.

The minimum national scales have divided Scottish teachers into contending sections. On a recent occasion an important education authority had before it representations on salaries from a head masters' association, an infants' mistresses' association, Men's Educational Union, Women's Educational Union, a provisional association of primary teachers, a secondary district branch of the Institute, and the local branch of the Institute. Some of the authorities have taken advantage of the multitude of conflicting interests to play off group against group; but this particular authority took the wise course of ignoring all the appellants except the local branch of the Institute, with which, as representing all the various sections of the profession, it carried through the necessary negotiations. The one hopeful feature of the situation is that, despite threats to withdraw from membership on the part of the more deeply discontented, all the groups seem to recognize that they must remain inside the Institute. Probably the first thing that will cure this evil will be the need for common action.

Right into the midst of the contending sections the Education

The Education Department and the Scales.

Department dropped a bombshell in the form of a letter to the Ayr Authority. That authority was one of the first to forward a salaries scheme to the Department with provision for the ultimate equalization of graduates and non-graduates, and it had all its plans made for paying up the difference between the old salary rates and the new back to May. About the beginning of the month the scheme was returned, seemingly on the ground that the categories of teachers recognized did not correspond with those of the Department's scale. This in itself was bad enough, because it involved further delay in the institution of the scheme, after expectations had been aroused. But the accompanying statement that the Department would not guarantee grants in aid of salary expenditure beyond the national minimum, and the suggestion that approval might be withheld

DENT'S SCHOOL BOOKS

Just Published.

THE NURSERY SCHOOL.

By **Margaret McMillan.**

Crown 8vo. Cloth, **7s. 6d.** net.

The story of the great work achieved by the Misses McMillan, who set out to prove, and proved beyond all doubt, that every child who is given a fair chance of wholesome upbringing can rise superior to disadvantages of birth and of heredity. The author insists on the possibility of this fair chance as a working system. The Nursery School will undoubtedly form an important feature of the educational system of the future in every civilized country, and this volume will be indispensable for all who wish to keep abreast of the movement, whether educationists or social workers.

Shakespeare for Community Players.

By **Roy Mitchell.**

With numerous Illustrations by **J. F. H. Macdonald.** Foolscap 4to. Cloth, **6s.** net.

A very practical handbook dealing with the amateur presentation of scenes from Shakespeare's plays, with full notes on staging and costumes, together with many practical and helpful drawings. The book has been specially prepared for all who are interested in the production of scenes from the plays.

Continuation School French.

By **Randall Williams** and **Walter Ripman.**

Illustrated by **Herbert Cole.** Cloth 8vo. **2s. 6d.** net.

A Rapid French Course for Junior Pupils who can only give a short time weekly to French, and who cannot be trained on ordinary Reform Lines. English is therefore used for explaining points of grammar, and for translating those French words which have not similar form and meaning to the English. The text is a continuous story of everyday life.

. Applications for Specimen Copies from Responsible Teachers are invited.

Dr. Richard Wilson's English Reading Books.

Storyteller's Hall.

Cloth. Crown 8vo. **2s. 6d.** net.

A purely literary Reader for Junior Forms.

Coronata.

Cloth. Crown 8vo. **2s. 6d.** net.

The favourite Poetical Anthology.

Treasure Trove.

Cloth. Crown 8vo. **2s. 6d.** net.

A purely literary Reader for Middle Forms.

Each volume is beautifully illustrated in Colour and Black and White.

Full List of Modern Language Series on application.

ALDINE HOUSE, BEDFORD STREET, W.C.2.

till all the authorities had submitted their schemes, were even more disquieting. Everybody knew that the Education (Scotland) Fund was limited, but the general belief was that it was ample to allow payment up to at least 50 per cent. of the expenditure on salaries, as had indeed been promised in the minute of April last. But why should the Department go out of its way to say the obvious? Some teachers were inclined to think that the statement had been made with the view of scaring the authorities into greater economy. The Executive of the Institute seems to have taken a different view and read into it the possibility of the payments proposed by some of the larger authorities to put non-graduates on the graduate scale not being recognized as expenditure for grant as an element in the Minimum National Scale. Whatever the meaning of the letter, the Department was probably surprised at the volume of protest the letter evoked. Permission was speedily forthcoming to the Ayr Authority to proceed with its scheme, and a minute appeared defining more precisely the nature of the Department's undertaking regarding grants to the authorities.

For many weeks back the most vehement objections have been made by Highland Parish Councils to the issuing of assessment notices for the collection of the education rates. This movement, which has been aided and abetted by great territorial lairds and by ministers of the Church, has taken various forms, from simple protests to point-blank refusals to levy the rates. The cause of complaint was the large increase in the cost of education in consequence of the Education Act, which, according to an oft-repeated contention, was passed without proper consideration on the part of the rate-payers. The rates in some parishes certainly look formidable, and, even after discount has been allowed for an exaggeration due to peculiarities of the system of valuation and assessment, the amount is probably excessive in most parts of the Highlands, with their sparse populations and their proportionately expensive schools. The common demand made by the protesters was that the Government should contribute 80 per cent. of the cost of education to necessitous areas. That there was ground for the claim is virtually admitted in the minute already mentioned. Most of the education authorities are promised 50 per cent. more or less, according as funds are available, of their approved expenditure. But Argyll is to get 60 per cent.,

The Highland Revolt.

Inverness and the northern counties 75 per cent., and Shetland 80 per cent. The pity is that this concession is only made now when it may seem to be a yielding to threats, and that men who might have been expected to uphold the law should have made themselves parties to illegality. Why was this obvious difficulty not foreseen?

The Authorities' Scales.

Several of the larger authorities have published their salary scales, presumably with the view of putting their teachers on a satisfactory footing before the close of the year. For the most part they stick pretty close to the fixed scales, contenting themselves with making it possible for non-graduates to attain to the graduate maximum at long last and limiting their generosity to cases of special hardship. The former boon is much appreciated by the teachers, who appreciate the obvious desire of the authorities to meet their views in regard to existing teachers. Much the best of the scales made public is that of the Glasgow Authority. Practically every figure in the Minimum National Scales has been increased by £50, and the mean £5 increments for women in the early years of service have happily disappeared. Only in one single case does a figure in the Glasgow scales fall below the scales submitted to the Salaries Commission by the Educational Institute. Yet Sir Charles Cleland, the Chairman of the Authority, in moving the adoption of the scheme, stated expressly that even yet the teachers were by no means overpaid. It is a pleasing fact that in Glasgow and some of the other centres the teachers were taken into the counsels of the authorities all through the preparation of their scales.

The Duchess of Atholl, in urging the claims of teaching as a profession on the women students of Glasgow University, after she had received the Degree of LL.D., asserted that the new education authorities are more enlightened than the school boards they have displaced. If many of them show the enterprise that characterizes the Perth Authority, of which the Duchess is an active member, the assertion will be justified. That authority, facing the facts of a difficult situation boldly, recently convened a two days' conference of all its teachers, to the number of six hundred, to discuss the problems of religious and sex education. The meetings, which were held on November 28 and 29, were

G. BELL & SONS, Ltd., York House, Portugal St., W.C.2.

addressed by a number of trusted experts: the Rev. Dr. Herbert Gray, Prof. J. Arthur Thomson, Dr. James Knight, Miss Norah Marsh, Mrs. Gordon Blackie, M.D., and Mrs. Laing. In order to secure freedom of discussion the proceedings were conducted in private session. As might be expected, a good deal of what was said was too vaguely general to be of much practical value, but one or two of the addresses (notably the summing up of Prof. Thomson) were definite and to the point. The great thing, in any case, was that such a conference should be held. Problems like that which occupied it will find solution only after much thought and effort, such as an interchange of views promotes. Mr. Munro, the Secretary for Scotland, showed the importance he attached to the gathering by his presence on the closing day.

Consequent on the provision in the Education Act that the education authorities are to contribute to the maintenance of the training colleges in proportion to the number of teachers in their service, the existing committees for the training of teachers are completely reconstituted. The

four University centres are still to have their provincial committees (drawing their members from authorities, Universities, central institutions, the Educational Institute, and the churches in fixed proportions). These committees, however, are to have less power than their predecessors nominally enjoyed, their main occupation being the management and supervision of their respective colleges. The real power is vested in a National Committee of forty-seven members, representing all the education authorities, which is to act through a central executive, consisting of the chairmen of the National Committee and of the provincial committees, eight members elected by the National Committee, and two teacher members. The central fact in the arrangement is that the National Council is in every case to retain full control over, and responsibility for, the finances of the training centres, including the appointment, transfer, remuneration, and dismissal of all lecturers, teachers, and other officers. The Central Executive, on whom the work will mainly fall, cannot fail to be a more active and intelligent body than any of the expiring committees. If the Executive or the local committees are tempted to fall short, the teacher members—no longer nominated but now directly elected by the Institute—may be trusted to keep them up to the mark.

A minute of August 18 with reference to the payment of maintenance grants to central institutions (technical colleges, schools of art, and veterinary colleges, &c.), which has just been issued, reveals the tight grasp the Education Department have of all education below University level, and gives warning to the Universities as to what they may expect if they surrender any of their autonomy in exchange for grants from the Treasury. The constant refrain of the nine articles setting forth the terms and conditions on which grants will be paid from the Education Fund is: "to be approved by the Department." One looks in vain for any single thing of any consequence that these highly specialized institutions can do without the direct consent of the Department or, at the least, without the risk of interference from the Department. Capable as the officers of the Department are, powers such as they arrogate to themselves by minute are too great for any group of Civil servants. What is wanted is a transfer of some of the present responsibilities of the Department to a national council. Perhaps the Advisory Council when set up will show their capacity so unmistakably that they will get this work committed to them as a matter of course.

Edinburgh University Court have appointed Dr. G. M. Robertson Professor of Psychiatry, Dr. J. H. Ashworth Professor of Zoology, and Mr. T. P. Laird Professor of Accounting and Business Method.

Edinburgh University has received £10,000 for the institution of a lectureship on orthopaedics, and Glasgow University £20,000 for a chair in Applied Physics and £5,000 for a lectureship on electrical therapeutics. The donors were in both cases anonymous.

From some of the members of the junior staffs comes the suggestion that the Universities, instead of adding to the number of their professors and lecturers, should get their benefactors to contribute to the better payment of existing lecturers.

IRELAND.

The most important—indeed, the one—event of the month has been the introduction into Parliament of the long-awaited Irish Education Bill, on November 24. As was expected, it follows very

(Continued on page 42.)

The Book which answers Every Kind of Question.

Would it not be an advantage to have in the school library, ready for instant reference, a book which would solve immediately the thousand and one questions which arise in the course of the day's work in form, in the student's own reading, or in conversation?

Q. WEBSTER'S NEW INTERNATIONAL DICTIONARY

is just such a book. Whether the question be so modern as the meaning of the much-discussed "Vitamines," or the functions of the "Coolidge Tube," or of such antiquarian interest as the history of the Rosetta Stone, "WEBSTER" will not fail to give the desired information.

Q. The "NEW INTERNATIONAL" will settle a disputed point in pronunciation as readily as it will tell the exact position and population of Canajoharie, or recall the characteristics of Mr. Mantalini.

Q. A new edition of the "NEW INTERNATIONAL" has just been published, covering all the additions to the Language in recent years, and containing also an entirely new Biographical Dictionary and a Supplementary Gazetteer.

Q. A prominent educationist says that: "Training the youthful mind to a competent and ready use of the dictionary, and fixing the habit of consulting it, is one of the main duties that the school can perform for a student"; and certainly too much stress cannot be laid upon the advantages arising from the acquirement of the "Webster Habit" of referring any doubtful point to its authority.

Q. WEBSTER'S NEW INTERNATIONAL DICTIONARY

deals, in its 2,700 pages, with 442,000 Words and Phrases, and contains 6,000 Illustrations. It is supplied either in one or two volumes, in a variety of bindings.

Price, in one volume, Buckram, £3 net, or by Deferred Payments if desired.

Q. WRITE TO-DAY for Illustrated Pamphlet with specimen pages and opinions of famous men in all departments of learning.

York House, Portugal Street, W.C. 2.

largely the recommendations of the Vice-Regal Committees which reported last winter, with considerable necessary expansion. Before giving a summary of its contents, one may express regret that the Chief Secretary brought it in without making a speech; a Bill of this importance requires some definite explanation of principles and plan. The second reading, it is hoped, may be taken before Christmas, when a debate would take place; but at the time of writing its date is uncertain. Again, it was understood that the publication of the Bill would be accompanied by a White Paper explaining the financial provisions and indicating how they would affect the salaries of teachers and grants to schools. This though since promised has also not yet appeared. And, thirdly, it is now clear that the Bill will not be passed this session. The Prime Minister, in announcing the Government's plans for the remainder of the Parliamentary session, on December 4, said that it would be carried over into the new session. In the absence of any debate it is difficult to say what attitude the House of Commons will take towards it, but one can hardly suppose that, having passed Bills of a similar character for England and Scotland with little opposition, it will refuse such a Bill to Ireland. Irish opinion has not at present definitely declared itself, but those directly concerned with schools can see in it enormous possibilities for the development of Irish education. It contains so many provisions which everybody will accept as educationally sound and progressive.

The Bill is in five parts. Part I creates a Department of Education, of which the Chief Secretary will be President, and which will have two other members—one the Vice-President of the Department of Agriculture and Technical Instruction, and the other a permanent member appointed by the Lord-Lieutenant. The Department will take control of all primary, secondary, and technical instruction. The principles at present in practice in the matter of religious instruction are to be adhered to. The Department is to be assisted by an advisory Board of Education consisting of fifty-one members—viz. the Department itself, sixteen appointed by county councils and boroughs, nine representatives of national schools, five of secondary schools, two of technical schools, and sixteen others appointed by the Lord-Lieutenant. The Board will continue in office for three years. Payment of grants to schools on the results of examinations is abolished.

Its Provisions.

Part II provides for local administration for primary and technical education. A local education committee is to be established for each county and for each county borough. Half of the committee will be appointed by the council from its own members and the other half by the Department, who will secure an adequate representation of persons connected with education. These committees will have power to build and furnish schools, and teachers' residences, to look after school attendances, to make provision for the conveyance of children to and from school in country districts, to provide exhibitions, &c., to enable children to attend secondary schools, to provide evening continuation schools and schools for afflicted children, &c. They will not have any right to interfere with the present managerial system or the appointment of teachers in national schools. The age for compulsory attendance is to be raised to thirteen. The committees will receive grants from the Department and be able to raise money by a local rate up to 3d. in the £ for technical work. For secondary education a rate may be imposed in each county and county borough of 1d. in the £ for the first three years, and then of 3d. in the £, and this will be paid to the Department, who will spend it after consultation with the Board of Education. The rate for primary education is not limited. Part III provides for superannuation and the payment of pensions. Part IV deals with finance. The Department will receive the present National School Teachers' Pension Fund, the Local Taxation Funds at present paid for technical instruction and for intermediate education, £1,000,000 which was provided at the time of the disestablishment of the Church of Ireland for intermediate education, and, in addition, nine-eighths of the excess of the amount of the sums voted for education in England and Wales over the amount spent in the year 1914. A similar nine-eighths is to be paid for the present financial year, dating from April 1 last. There are provisions for spending part of this endowment on the purposes on which it is spent at present. Part V contains some general provisions of no primary importance as far as concerns the principles of the Bill.

A criticism of the Bill has been published by the Standing Council of the Irish Technical Instruction Association, who point out that it will have a serious and unexpected effect upon the

position of technical instruction in Ireland. They state that, "contrary to general expectation, the Bill does not confine itself to reforms in the Board of National Education and the Intermediate Education Board." It must have overlooked the recommendations of the Vice-Regal Committee on Intermediate Education, which clearly include the co-ordination of primary, intermediate, and technical education under one central authority. However, it is true that the Bill will "disturb the existing system of administering technical education . . . and the technical instruction committees." It should, however, be possible without much difficulty to see that the excellent work in Irish technical instruction is continued and even developed. It requires more money and is more likely to get it under a unified system than if it continues apart from it, and, besides, technical instruction will have a special branch of its own, as, following precedents, the administration of Irish education under a single department will be subdivided into three sections—primary, secondary, and technical.

Another important educational development is the arrangement between Trinity College and one of the Dublin training colleges for primary teachers (that belonging to the Church of Ireland) whereby the students of the training college from the year 1920 will be admitted to the University, and for their two years of training will be instructed partly there and partly in the training college. Such students at the end of their second year may, on passing an examination, become third year students of the University and proceed in the ordinary way to obtain a degree. This admirable scheme has been approved by the National Board, and the only difficulty is a financial one. £3,000 is being asked for from the Treasury in order to continue the working of the college on a satisfactory basis.

SCHOOLS.

JAMES ALLEN'S GIRLS' SCHOOL, DULWICH.—The annual distribution of prizes and certificates took place on November 21. The prizes were presented by Mrs. G. Smith. Mr. G. Smith, Master of Dulwich College, gave an interesting address, in which he gave the girls a sound piece of advice in urging them to do the "little bit extra." During the year the following successes have

been obtained. In connexion with the University of London, twenty-four girls passed the General School Examination, three with Honours and nineteen obtaining Matriculation Certificates. In the Grand Concours de la Société Nationale des Professeurs de Français en Angleterre, Constance Baker won a prize. In the Examination of the British Association for the Study of the German Language, Doris Donno obtained distinction and won the First Prize. Six girls were awarded L.C.C. Intermediate Scholarships. Among former pupils, Beatrice Allen and Nora Edmed both took the London B.A. Degree with Second Class Honours in English; Hilda Bond passed the first part of the Second M.B. Examination; Hilda Thompson took the Welsh B.A. Degree in Botany and French.

PRIZE COMPETITIONS.

THE Prize for the December competition is awarded to "666," and the second place to "Vingt-deux."

The winner of the November competition is Mr. J. Shawcross, Duddleswell, Uckfield.

Extract from Novalis' "Heinrich von Ofterdingen,"

By "666."

Very different is it with those peaceful, retiring folk, whose world is their own soul, whose activity consists in contemplation and their life in a silent moulding of their inward powers. No unrest drives them outside themselves. A peaceful portion is all they ask, and the vast drama around and beyond them does not tempt them to play a part in it themselves, though it is sufficiently important and wonderful in their eyes for them to devote their leisure to its contemplation. Great and complex events would ruffle their calm. A simple life is their lot, and, if they are to become acquainted with the rich contents and countless phenomena of the world, it must be from the lips or pen of others. Only rarely in the course of their lives is an incident permitted to draw

The Revised Scale for Posts Wanted or Vacant will be found on page 27.

* Replies to these advertisements should be addressed "No. —, c/o Mr. William Rice, 3 Ludgate Broadway, E.C.4." Each must contain sufficient *inose* stamps to cover postage on to advertiser. Post cards will NOT be sent on.

them down for a time into the wild vortex of things, that through some experiences of their own they may be more nearly instructed in the circumstances and character of men of action. On the other hand their sensitive souls are fully absorbed in nearer and unimportant phenomena, which present to them the great world in miniature, and they cannot go far without making the most surprising discoveries in themselves about its nature and meaning. These are our poets, rare "birds of passage," who from time to time flit through our dwellings, and everywhere revive the time-honoured worship of humanity and its earliest gods, the Constellations, Spring, Love, Fortune, Fertility, Health, and Mirth; themselves possessed already here on earth of the peace of heaven, and distracted by no foolish longings, they are content to inhale the fragrance of the fruits of earth, without eating of them, and thereby condemning themselves irrevocably to the bondage of the world below. Welcome guests are they, whose golden feet fall lightly on our thresholds, and at whose coming all involuntarily unfold their wings. A poet is like a good king; he chooses out the smiling and open countenances, and he alone it is who rightly bears the title of "Wise." Compare him with the hero, and you will find that, while the poet's songs have often kindled the hero's heart in the youthful breast, the hero's deeds have seldom called down the spirit of poetry into a bosom that was strange to it.

The prize-winner has given us a tasteful version of Novalis' beautiful description of the poet's office, but he has made two or three slips. *Vielfach* is not "complex," but "manifold" or "varied." *In seine raschen Wirbel: seine = des Vorfalls* ("its seething whirlpool" might perhaps be admissible). *Freie Gäste* is "free guests," i.e. no restraint is put upon them. *Klare Gesichter* is "bright faces." The sentence *ein Dichter . . . aufsuchen* is difficult, and the prize-winner's version is bold rather than exact. The meaning seems to be that the poet is discovered by the glad and happy faces that surround him (*nach* = "judging by"). Finally, "retiring folk" sounds a little colloquial; say, rather, "unknown" or "unrecognized men." The moonlight haze of this passage is very characteristic of the German Romantics, as is the exaltation of the poetic nature. To parallel the latter in English literature, we should probably have to go back to the

Elizabethan age. Compare, for instance, Greene: "If there be any spark of Adam's paradised perfection yet embered up in the breasts of mortal man, certainly God hath bestowed that his perfectest image on poets."

We classify the 29 versions received as follows:—

Class I.—666, Vingt-deux, Redivivus, E.T.C.P., Yolande, M.A.A.S., Earnstein, L.A., Gertrud.

Class II.—E.A.N., Esse quam videri, Culex, Pen, M.S., Fox, φιλόλογος, Mitbewerber, December, South-Wester, Chingleput, M.J.R., T.T., E.W.R.

Class III.—Amba, Excelsior, Imric, S. Chad, Umbria, Pentire.

A Prize of Two Guineas is offered for the best essay in French of not more than 600 words on one of the following subjects:—

1. A criticism of any well known English novel.
2. Any personal experience of travel on the Continent since November 11, 1918.
3. Any personal experience of war work.
4. Christmas in War and Peace.

If it is preferred, more than one subject may be taken, provided that the whole composition does not contain more than 600 words.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on January 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

SENIOR MATHEMATICAL MISTRESS, in Co-educational School just outside London. Honours Graduate and previous experience essential. Initial salary £150 non-res.—No. 15,308.

BOTANY SPECIALIST in important Girls' School in Wales. Honours Graduate, with previous experience essential. Salary ranges from £200 to £360 non-res. Previous experience and degree will be taken in fixing initial salary.—No. 15,013.

SCIENCE MISTRESS, in important Girls' Boarding School on South Coast, to teach Geography, elementary Chemistry, and Botany. Graduate, with previous experience essential. Salary £130, together with board and residence, or post could be held as non-resident one at salary of £180.—No. 15,042.

SCIENCE MISTRESS in important Girls' School in the London district. Graduate essential. Post could be held either as resident or non-resident one, and in either case good salary offered, according to qualifications.—No. 15,059.

SENIOR MISTRESS, in large Girls' School just outside London, to offer some or all of the following subjects:—Botany, elementary Science, Modern Geography, and Mathematics. Graduate, with previous experience essential. Salary about £120, together with board and residence.—No. 14,535.

SCIENCE MISTRESS, in Girls' Boarding School in Home Counties, to teach Chemistry, Physics, Botany, with Geography or Latin as subsidiary subjects. Salary from £80 to £90, together with board and residence, or post could be held as non-resident one.—No. 15,043.

Lower Form and Preparatory Mistresses.

KINDERGARTEN MISTRESS required in important Girls' Church of England School in the South-west of England, to teach general Preparatory School Subjects, including good Drawing. Salary about £60, together with board and residence, with prospect of increase should the candidate prove satisfactory.—No. 15,056.

JUNIOR MISTRESS, in important Girls' High School in the North of England, to teach English, Elocution, with elementary Arithmetic, Drawing, History, and Scripture. Candidate looked for who has the Froebel or Cambridge Higher Local Certificate. Salary from £150 to £170, rising to maximum of £200, non-resident, according to qualifications and experience. In the case of a Graduate, salary scale rises to maximum of £320.—No. 15,311.

JUNIOR ASSISTANT MISTRESS, for the Preparatory Class of a large and important Girls' Boarding School in the Channel Islands, to teach good Nature Study, also Drawing. French conversation would be an additional recommendation. Candidate looked for who has had some previous experience. Initial salary £80, together with board and residence.—No. 15,307.

KINDERGARTEN MISTRESS in large and important Girls' Boarding School in the North of England. Candidate looked for who has Froebel Certificate. Salary not less than £70, together with board and residence.—No. 15,141.

JUNIOR ASSISTANT MISTRESS, in Boys' Secondary School in Home Counties, to teach General Elementary subjects. Candidate looked for who has had some previous experience with boys. Salary up to £160 non-res., according to qualifications.—No. 15,287.

ASSISTANT MISTRESS, in important Boys' Preparatory School in South of England, to teach good Music, with General Elementary Subjects, also Drawing. Previous experience essential. Salary about £120, together with board and residence.—No. 15,320.

ASSISTANT MISTRESS, in Boys' Preparatory School just outside London, to teach good Mathematics up to Scholarship standard, also French and History. Salary from £100 to £120, together with board and residence.—No. 15,235.

ASSISTANT MISTRESS, in high-class Boys' Preparatory School just outside London, to teach good English and French on the Direct Method. Salary about £100, together with board and residence.—No. 15,239.

Modern Language Mistresses.

ASSISTANT MISTRESS required to teach French throughout the School, in large Girls' School within easy reach of London. Candidate who has acquired knowledge of language abroad looked for. Salary from £75, together with board and residence.—No. 14,878.

SENIOR FRENCH MISTRESS, in important Girls' High School, in North of England. Residence abroad and previous experience essential. Post resident and good salary, according to qualifications.—No. 15,120.

ASSISTANT MISTRESS to teach French throughout School, in important Girls' Boarding School in the North of England. Honours Graduate, with residence abroad essential. Salary not less than £120, in addition to board and residence, according to qualifications.—No. 15,046.

Music Mistresses.

BLACKIE & SON'S NEW LIST

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

A SURVEY OF MODERN HISTORY.

By H. W. HODGES, M.A., F.R.Hist.S.

Late Exhibitioner of Lincoln College, Oxford; Head of History and English Department, Royal Naval College, Dartmouth. 6s. net.

This textbook of the history of the nineteenth century is intended for use in preparation. It provides the student with such a material background as should enable him to understand the history teacher's lectures on the subject, and estimate rightly the relative importance of the various happenings. Prospectus post free on application.

SCIENTIFIC METHOD. ITS PHILOSOPHY AND ITS PRACTICE.

By F. W. WESTAWAY. New and Revised Edition. 10s. 6d. net.

At the present time, when science touches life at so many points, and so much of human energy and intelligence is given up to its pursuit and advancement, there is a clamant need for a book explaining the fundamental principles of scientific investigation. Such a book is here provided. To make the book as useful as possible to the greatest number of students and scientists, it has been found necessary to discuss the philosophic notions on which the developing Scientific Method of to-day is based.

A NEW GRAMMAR BOOK.

By AGNES CATNACH, B.A. (Lond.), Assistant Mistress at King Edward's Girls' High School, Birmingham. 2s. 6d. net.

This book seeks to connect more closely the formal study of language with adequate expression of thought, and to attain this end all the work is based on the study of the sentence. It is hoped that to children studying on these lines English Grammar will be a subject of living interest and that the various facts of grammar will gain that logical connexion which they so often seem to lack.

The matter has been set forth as simply as possible, and in a manner to retain the interest of the pupil.

A JUNIOR FRENCH COURSE.

FIRST AND SECOND YEARS.

By E. J. A. GROVES, Lic. ès L., Senior French Master, Bedford Grammar School.

First Year, 2s. 6d. net.

Second Year, 4s. net.

The need of a practical French Course combining the essentials of the "Direct Method" with sound grammatical teaching has long been felt, and has been lately emphasized by the Reports on the Teaching of French issued by the Board of Education and the London County Council respectively. The "Direct Method" alone has been found to leave the pupils ill prepared for precise expression or exact renderings in translation, and generally wanting in an exact knowledge of French. Mr. Groves's *Junior French Course*, now issued, undoubtedly demands the consideration of all Modern Language teachers, for it will be found to combine all that is useful of the "Direct Method" with systematized grammatical instruction, largely by process of induction.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction, Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. The Plays are edited chiefly from the literary standpoint, although philological notes, where such are required, are given. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. 1s. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known Junior School Shakespeare, which omits everything which might be thought undesirable in class reading. Cloth covers, 7d. each.

A BOOK OF ENGLISH HISTORY FOR CHILDREN. Part I.

By LILIAS MILROY, Head Mistress of the Leamington High School for Girls, and ELIZABETH M. BROWNE, formerly Assistant Mistress in the Truro High School for Girls. 2s. 6d. net.

This history book seeks to steer a course between those mere "outlines," which are bound to be lacking in interest for young children, and the books of stories from history, often delightful to the readers, but apt to be rather too bulky for use as textbooks. The aim of the authors has been to select carefully the more important movements and the more picturesque incidents of history, and in connexion with these to give those ample details which children love, and at the same time to preserve a clear chronological sequence.

THE WARWICK SHAKESPEARE.

General Editor—Prof. G. H. HERFORD, Litt.D.

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and æsthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

The WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. net each.

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.

By G. TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge, Master of the Modern Side in Harrow School. 6s. net.

ON THE WRITING OF ENGLISH.

By GEORGE TOWNSEND WARNER. Price 3s. 6d. net.

From the Author's *Introductory Note*.—I have tried to set down briefly the first principles of building up an "Essay": the way to gather and sort material; then to reveal the commonest pitfalls which lie in wait for the beginner, and to put him on his guard against glaring mistakes.

TILLAGE, TRADE, AND INVENTION.

An Outline of Industrial History.

By G. TOWNSEND WARNER, M.A. Crown 8vo, cloth. 2s. 6d. net.

New and Revised Edition.

MAGNETISM AND ELECTRICITY.

Including the Principles of Electrical Measurements.

By S. S. RICHARDSON, B.Sc., A.R.C.Sc., Head of the Physics Department, Central Municipal Technical School, Liverpool. 6s. net.

"Mr. Richardson is to be congratulated on the success which has attended his efforts. . . . The book is an admirable one."—*Electrician*.

THE GROUNDWORK OF BRITISH HISTORY.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c., and C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and Full Index. 764 pp., super-crown, 8vo, 8s. net. Complete in One Volume.

In Two Parts, 4s. 6d. each net. Part I, s.c. 55-1603; Part II, 1603-1911.

For the convenience of those requiring the book for certain examinations it is also issued—

In Three Sections, 3s. 6d. each net:—Section I, s.c. 55-1485 A.D.; Section II, 1485-1714; Section III, 1714-1911.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C.4.

AND AT GLASGOW AND BOMBAY.

Supplement to THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 606.

JANUARY 1, 1920.

EUROPEAN HISTORY.

ANCIENT TIMES: A History of the Early World.

By J. H. BREASTED, Ph.D. xx + 742 pages. Illustrated. 8s. 6d. net.

MEDIAEVAL AND MODERN TIMES.

By J. H. ROBINSON, Ph.D. xliii + 790 pages. Illustrated. 8s. 6d. net.

These two books make a broad general survey of the history of Europe and the Near East, and are intended primarily for pupils in the upper forms of secondary schools and for undergraduate students. In both volumes it has been the purpose of the authors to lead the student to realize the essential continuity of history, rather than to give him a knowledge of those military and political events which had little influence on their own or subsequent times. Attention, therefore, is focussed on those tendencies, movements, fermenting ideas and enthusiasms which have real significance in the development of Western civilization, and only those facts and occurrences are emphasized which will aid the reader to grasp the meaning of some great period of human development, or the true nature of important institutions.

ANCIENT TIMES begins with a short account of the Stone age in Europe, and goes on to tell of the various Oriental Civilizations—Egyptian, Babylonian, Assyrian, Chaldean, Persian, and Hebrew. Then follows the story of the dawn of European civilization, of the rise and decline of Greece and Rome, and of the overthrow of the Roman Empire by the barbarians. The story of each great race or nation is clearly disengaged and presented in period after period, but the book outlines the early career of man as a whole without a serious gap.

MEDIAEVAL AND MODERN TIMES takes up the narrative where Professor BREASTED leaves it and continues it to the signing of the Armistice. In this book also the topical mode of treatment has been adopted, and by grouping together allied topics in one chapter the author is able to treat important phases of a whole age in a unified manner. Nearly half the volume is devoted to the history of the last two centuries so that the reader is actually brought abreast of his own times and prepared for intelligent observation and appreciation of the events of current history.

Both books are remarkable for the number and beauty of their illustrations which have been made an integral part of the narrative. They add much to its attractiveness and interest both for the student and general reader.

THE DEVELOPMENT OF MODERN EUROPE.

By J. H. ROBINSON and C. A. BEARD. Vol. I. The Eighteenth Century: The French Revolution and the Napoleonic Period. 12mo, cloth. xiv + 362 pages, with maps and illustrations. 7s. 6d. net. Vol. II. Europe since the Congress of Vienna. 12mo, cloth. 528 pages, with maps and illustrations. 8s. net.

These volumes will meet the demand for a history of recent times which shall explain the social and economic, as well as the political, development of our own age, and shall also prepare the student to understand the great problems which the nations of the world have to face at the present time. Much less space is devoted to purely political and military events than has been commonly assigned to them in histories of the nineteenth century. On the other hand, the more fundamental economic matters—the Industrial Revolution, commerce, and the colonies, the internal reforms of the European States, &c.—have been generously treated. By the addition of three chapters to Volume II the narrative is brought down to August, 1918.

READINGS IN MODERN EUROPEAN HISTORY.

Edited by J. H. ROBINSON and C. A. BEARD. Two Volumes. Vol. I, 410 pages. 8s. net. Vol. II, 541 pages. 8s. 6d. net.

These *Readings* are intended to accompany chapter by chapter and section by section *The Development of Modern Europe*. Each volume contains more than two hundred extracts from a great variety of sources, which will serve the double purpose of amplifying and enlivening the study of the text and providing useful and interesting material for written exercises.

THE EMERTON HISTORIES.

By EPHRAIM EMERTON, Ph.D., Professor of History in Harvard University.

For those who are specializing in the history of the Middle Ages the Emerton Histories should prove very useful. The books embody noteworthy and well-established results of research, combined with all that is most valuable from the scholarship of the past. Professor Emerton has contrived to make each important topic stand out separately and distinctly in the mind of the reader, while he presents facts interestingly and in a manner which shows clearly their relation to each other and their place in the entire web of history.

A Recently Published Volume.

THE BEGINNINGS OF MODERN EUROPE. 12mo, cloth, xiv + 550 pages. With maps. 8s. 6d. net.

This book covers the period from 1250 to 1450. As contrasted with the Middle Ages (see *Medieval Europe*) the author shows that the all important difference in spirit which distinguished modern from mediæval times is due to the rise of the individual, and that the most striking phenomena of the period under survey results from the stirring of this new spirit. The topics discussed are: The Principle of the Modern State; The New Empire; The New Papacy; The Rise of a Middle Class; The Italian Republics to 1300; The Hundred Years' War; The Age of the Councils; The Age of the Despots in Italy; The Renaissance in Italy; The Northern Renaissance.

Previous Volumes by the same Author.

MEDIAEVAL EUROPE. 12mo, cloth, 632 pages. With maps. 8s. 6d. net.

INTRODUCTION TO THE MIDDLE AGES. 12mo, cloth, 286 pages. With maps. 6s. 6d. net.

Introduction to the Middle Ages treats of the period intervening between that of the Roman Empire at the height of its splendour and the beginning of what may be called the Middle Ages. It is the author's object to show that in this period, so frequently referred to as the Dark Ages, there was no stagnation of human effort or achievement, but that three forces of construction—the Christian Church, the Germanic Races, and the domination of the Frankish Race over all the other Germanic nations on the Continent—were gradually building on the ruins of Roman glory.

In *Medieval Europe* (814–1300) the author deals with the period which marks the transition from the ancient to later institutions. In an attractive manner Professor Emerton sets forth the outstanding features of mediæval as compared with later times, and makes special note of the mediæval tendency to merge individuality into some form of corporate life. It is, in fact, in this absorption of the individual into the corporation that the author finds the guide to mediæval life.

A complete catalogue of publications will be sent post free on application.

GINN & CO., 9 St. Martin's Street, Leicester Square, London, W.C.2.

THE ARS VIVENDI SYSTEM

Introduces into Human Evolution a new Principle: the
Discovery of the Respiratory use of The Cranial Sinuses.

It is Nature's Secret of Vitality and the Key to Health, Open-Air Education and Prevention of Consumption. Nasal Congestion specially treated without need of Operation.

A NEW DOCTRINE

After twenty years' research into the laws governing generation of human energy, the author has made an original discovery in breathing which will entirely revolutionize and reconstruct present ideas concerning cultivation of health and treatment of disease.

The principle is of universal application in physical and mental development. It will do more for the consumptive

in one month than can now be done in years. *It is the missing link in the Open Air Cure.*

It will be taught in every school and college, and practised in every home, in every hospital, and in every sanatorium, for there is only one life, only one energy, which in its positive aspect produces bodily and mental vigour, and in its negative aspect bodily and mental weakness.

PRACTICAL APPLICATION

Such remarkable practical illustrations of the new principle have been obtained that the Ars Vivendi theory can be regarded as proved beyond question. One of the most striking instances is the case of a lad of 18 from the West of England, who was described in his father's letters as follows:—"With reference to your letter in the 'Western Morning News,' 16th June, 'The Point in Education,' I shall esteem it a great favour if you would furnish me with fuller particulars. My lad, now aged 18, has all along been a backward boy. In many ways one can say he is a normal boy, and in others abnormal. He is mentally dull and backward, terribly self-conscious. one everything possible to get him right, but it appears almost hopeless. At times his face is void of expression. He has had physical drill, but has not benefited by it as far as we can see. He walks badly, no spring, and poise of body bad. He imagines that everybody is looking at him when he goes out for a walk or when in any public place, and if he can get down a side street instead of the front street he will do so. He feels too that his legs are giving way under him and twist around him in the street."

The very first treatment produced a dramatic change in him. He described himself as beginning "to thaw." The same afternoon he was able to shake his arms and hands freely—a thing which his father declared he had never been seen to do before. This case was shown in November along with a few others, including a little boy of 5, to one of the most eminent surgeons in London, who declared it was impossible

to question the results obtained, though he was reluctant to accept the theory on which the practice was based. A few days afterwards he wrote: "Dear Mr. Lovell,—I have been thinking a good deal about what you said and showed to me the other day at Park Street. I was much interested therein, and think you have got hold of something that will prove useful; but the chief point that impressed me was the personal influence that you exercised over the cases you brought before me. This is a most important element in your success, I am sure, and how it is to be exercised when you come to deal with large classes I do not at present see."

This is the crux of the question—involving a revolution in selection and training of the medical man and the educationist. In the first place, only a certain type of man and woman will in future be considered eligible for the clerical, medical, and teaching professions. This class must be physically and mentally above the average of the race—the original idea of the Sacerdos (Sanskrit root Sa). In the second place, this class must be specially trained in the practical application of a method which inaugurates a new era in health and education. The results obtained in the case of the lad could only be reached in a certain manner, which can be taught. The eminent surgeon's opinion that the results were due to personal influence alone was quite erroneous. No matter how great the influence, the method of application must be considered as the principal factor.

Mr. ARTHUR LOVELL, 94 Park St., Mayfair, London, W.1.

For Comparative Study and Training in Composition. By F. H. PRITCHARD, Lecturer in Literature at the Municipal Technical School, Devonport. Third Impression. Crown 8vo. 240 pages. 2s. 6d. net. (Prospectus free on application.)

STUDIES IN LITERATURE.

By F. H. PRITCHARD, Author of *English Extracts and Exercises*. Crown 8vo. 224 pages. 2s. 6d. net. (Prospectus free on application.) This volume follows the author's previous work, and provides a more advanced and detailed course.

A PRACTICAL COURSE IN INTERMEDIATE ENGLISH.

By EDWARD ALBERT, M.A., George Watson's College, Edinburgh. Third Edition. Crown 8vo. 272 pages. 3s. net. This course is designed as an introduction to *A Practical Course in Secondary English*, of which Mr. Albert was joint Author.

A PRACTICAL COURSE IN SECONDARY ENGLISH.

By GEORGE OGILVIE, M.A., Broughton Junior Student Centre, and EDWARD ALBERT, M.A., George Watson's College, Edinburgh. Second Edition. With Complete Index. Crown 8vo. 500 pages. 5s. net.

Also in Three Parts:

Part I. Style. 184 pages. Limp. 2s. 3d. net.

Part II. Form. 176 pages. Limp. 2s. 3d. net.

Part III. History of the English Language. 160 pages. Limp. 2s. 3d. net.

Also Parts I and II in one volume. 350 pages. 4s. net.

PRACTICAL ENGLISH COMPOSITION.

By C. M. GERRISH, B.A., and M. CUNNINGHAM. Adapted and edited for English Schools by E. W. EDMUNDS, M.A. Second Edition. Large crown 8vo. 320 pages. 4s. net. Also Section I. 112 pages. 2s. net. Sections II and III. 224 pages. 3s. net.

A PRACTICAL TRAINING IN ENGLISH.

By H. A. KELLOW, M.A., late Head of the English Department, Allen Glen's School, Glasgow. Second Edition. Crown 8vo, 272 pages, with full Indexes, 3s. 6d. net.

A SCHOOL GRAMMAR OF PRESENT-DAY FRENCH.

By J. E. MANSION. Crown 8vo. 256 pages. With full Index. 3s. 6d. net. A new French grammar for middle and senior forms, special features of which are the stress laid on fundamental principles, and careful differentiation between the normal constructions of the language and those which belong to emotional, colloquial, or literary expression. (Prospectus on application.)

CONTES DE LA FRANCE CONTEMPORAINE.

Edited, with Vocabulary, &c., by W. M. DANIELS, M.A. Sm. crown 8vo. 264 pages. 3s. net. Also without Vocabulary. 2s. 6d. net. This volume includes short stories by Anatole France, René Bazin, François Coppée, Alphonse Daudet, Anatole Le Braz, Paul Bourget, Guy de Maupassant, &c.

RÉCITS HISTORIQUES.

A Selection of the chief episodes in French history to the death of Henri IV. With Introductions, Notes, Vocabulary, and Exercises for Free Composition. By E. MOFFETT, M.A. Illustrated. 192 pages. 2s. net.

LECTURES HISTORIQUES.

Edited by E. MOFFETT, M.A., author of *Récits Historiques*. A selection from standard authors of the chief episodes in French history from Henri IV to Napoleon. With Introduction, Notes, and Vocabulary. Illustrated. 284 pages. 3s. net. Also without Vocabulary. 2s. 6d. net.

COMMERCIAL SPANISH.

By Prof. C. F. McHALE. With Illustrations. Maps in Colour. Complete Vocabulary, and Full Index. Crown 8vo. 332 pages. 5s. net.

A unique textbook for learning through the medium of Spanish not only that language itself, but also many important facts about commercial procedure in countries in which Spanish is spoken.

SPANISH COMMERCIAL CORRESPONDENCE.

A Reader, Manual and Composition Book by A. F. WHITTEM, Harvard University, and M. J. ANDRADE. With full Vocabularies and Index. Crown 8vo. 330 pages. 3s. 6d. net.

LA VIDA DE VASCO NUNEZ DE BALBOA.

By M. J. QUINTANA. Edited with Introduction, Notes, and Vocabulary, by A. E. WOOLF, D.Lit. Small crown 8vo. 116 pages. 1s. 6d. net.

A "one term" Reader, the text amounting to 64 pages.

CAPITULOS ESCOGIDOS DE V. BLASCO IBANEZ.

With Notes and full Vocabulary by ALIC E. WOOLF, M.A. Crown 8vo. 192 pages. 2s. net.

Selections—each one complete in itself—from the works of the foremost novelist of the present day, whose works have been translated into every European language.

REVIEWS AND MINOR NOTICES.

RUSSIAN BOOKS.

- (1) *The Fourth Russian Book*. Part I: English-Russian Exercises. By NEVILL FORBES. (2s. net. Clarendon Press.)
- (2) "Oxford Russian Plain Texts."—*Select Poems*. By LERMONTOV. (1s. 3d. net. Clarendon Press.)
- (3) *Evgenii Oniegin*. By PUSHKIN. (3s. 6d. Longmans.)
- (4) *Russian Handwriting*. Edited by R. BISKE. (3s. 6d. net. Richard Jaschke.)
- (5) *Easy Russian Reader*. Compiled by EVELYN C. WHILE. (Kegan Paul.)
- (6) *Practical Guide to the Russian Accent*. By MARK SIEFF. (4s. 6d. Richard Jaschke.)
- (7) *Anthology of Modern Slavonic Literature in Prose and Verse*. Compiled by P. SELVER. (5s. net. Kegan Paul.)
- (8) *LERMONTOV'S Novice*. Edited by J. D. DUFF. (5s. net. Cambridge University Press.)
- (9) *Russian Fairy Tales*. Edited by A. BRYLINSKA. (4s. 6d. Kegan Paul.)
- (10) *PUSHKIN'S The Captain's Daughter*.
- (11) *GOGOL'S Dead Souls*.
- (12) *CHEKHOV'S Short Stories*, Vol. I.
- (13) *CHEKHOV'S Short Stories*, Vol. II.
- (14) *SKVORTZOV'S History of Russia*, Vol. I.
- (15) *SKVORTZOV'S History of Russia*, Vol. II. The last six edited by R. BISKE. (1s. each net. Richard Jaschke.)

Mr. Forbes's "Fourth Russian Book" (1) consists of exercises on the materials contained in his First and Second Russian books; the present volume is presumably the concluding one of the series and we regret that we are unable to give it the unqualified praise we were happy to give to Mr. Forbes's "Russian Grammar." We have never been able to grasp Mr. Forbes's reasons for dividing up a course in this way: the Noun, the Verb, Russian translation extracts, exercises for Russian composition. It appears to us that the most profitable method for the study of Russian as for any other language is to keep grammar, translation, and composition on parallel lines and not each in a watertight compartment. The author may plead that there was a shortage of good Russian textbooks in this country when he began to write his course; this, however, could not be accepted as an excuse, as the real alternative would have been the production first of a first book containing all the necessary elements for Russian study (grammar and materials for translation both ways); then a second book of moderate difficulty; then a more advanced one still; and finally one of idiomatic and current or classical Russian. Such a system, too, would have had the advantage of being considerably cheaper for those students who did not at first require to go beyond one or two of the four stages. Fortunately there are now on the market two or three very satisfactory courses which do fulfil these requirements. We have also to find fault with the English of some of Mr. Forbes's sentences for translation—e.g., "This beautiful fair young man is my pupil"; "I also see the grey cat of the Spanish count," which are quite unforgivable in up-to-date books for language study.

On the other hand, we have nothing but praise for the Oxford Russian plain texts produced under Mr. Forbes's general editorship, and the latest addition to this series, an anthology of the poems of Lermontov (2), maintains the high level already attained. The selection, we believe, is by Mr. E. G. Underwood, and it appears to be representative and not wholly confined to Lermontov's lyrics, as is often the case. The type and production generally are the best we have seen, but in one or two places we have observed faulty accentuation.

For an unaccented plain text of Pushkin's "Evgenii Oniegin" (3) for English students we can see no justification; if the English student is able to study profitably without marked accents, he should surely be able to obtain plain texts for a few pence in a Russian-produced edition rather than pay 3s. 6d. for one in English. The truth, of course, is that a plain text is valueless, except for a Russian, unless the accents are clearly and correctly marked. The present edition contains no vocabulary and no notes, and merely five lines about the life of Pushkin, whose name the editor unscientifically transliterates as "Aleksandr [sic] Sergeievitch."

Mr. Roman Biske's selection (4) of handwriting, contributed by fifty-five different persons, should prove invaluable. It comes from a publisher who has had very considerable practical experience of the needs of English students of foreign languages. There is an excellent introduction (in Russian), and a key (in Russian type) at the end of the book. The book would be better in a binding rather than merely a paper cover, but this will probably be rectified when book production is less difficult.

Miss Evelyn While adds yet another to the very long list of Russian readers (5) for English beginners. It contains a very fair selection of riddles, anecdotes, fables, and songs in easy, but idiomatic, Russian. The pictures do not add to the attractiveness of the book.

(6) Mr. Mark Sieff's guide to the Russian accent, for the most

part, summarizes—none too well—the work of Grot, of Paul Boyer, and of Bystrow on this complex subject. It may be useful to the advanced student, but its price (4s. 6d.) is somewhat high. Mr. Sieff says that his book is intended for "practical purposes"; if that is so, why should he go to the trouble of including so many unusual words as examples—e.g. bast-bag, lye, sorrel, stove-seller, pine-mushroom, orange-agaric, gerfalcon, great sturgeon, &c.?

Mr. Selver's anthology (7) contains (his own?) translations of passages from Russian, Ukrainian, Polish—including the wonderful pages on Chopin by Przybyszewski—Czech, and a few from Southern Slav literature (Serbo-Croatian and Slovene). The translations of lyric poetry are not satisfactory; but then it takes a poet to translate a poet, and Mr. Selver is not a poet.

Mr. Duff's edition of Lermontov's "Novice" (Mtsyri) maintains the high standard of his previous work; it is carefully and thoroughly edited, and never lets the student down either by omission or errors; it contains accented text, notes, vocabulary, and an introduction, with a brief life of Lermontov and a useful chapter on his metre. The price (5s.) is perhaps a little high for so slight a work, and this may unfortunately place it beyond the reach of many students—which is a pity.

Madame Brylinska's collection (9) of Russian Fairy Tales is excellent. There is a most interesting introduction on the origins of the stories and on the influence on, and relation to, them of Arab, Persian, Turkish, and Byzantine stories. They are well graded according to difficulty and length. The notes are not so good, being often nothing more than free translations of the text, and, therefore, of little assistance to the student.

The abridged accented texts (10-15) published by Mr. Richard Jaschke and edited by Mr. Roman Biske, will bear comparison with the Oxford Plain Texts. They are inexpensive; each contains 96 well printed pages in paper covers of pleasing design, and, on the whole, representative. The first volume of Skvortzov's history covers the period of Russian history from the origins up to the Tartar invasion; the second from 1240 to the death of John the Terrible (1584), i.e. the period of the Rise of Moscow. The two volumes of Chekhov's stories of Russian life in the eighties are particularly good selections.

CLASSICS.

Caesar. Books IV (20-38) and V of the Gallic War. Edited by R. W. LIVINGSTONE and C. E. FREEMAN. (2s. 6d. net. Clarendon Press.)

This book raises an interesting point in Latin teaching. We all know the difficulty of finding texts which our pupils can read with sufficient speed to gain the interest of continuity. To plough slowly and laboriously through a few sentences of *Caesar* (or any other Roman author) in an hour is of such doubtful educational value that those who have themselves no love for the classics advocate that we should abandon the attempt to read the ancient authors in the original in our schools, and confine our effort to absorbing the subject-matter of their writings by means of translations. But those who know the classics know that to do so would be to miss half their value. There seem to be two solutions—and only two—of the resulting dilemma. Either we must teach our pupils the language, by means of specially written texts, before we introduce them to the literature—this is the claim of the Direct Method—or we must do as the authors of the present volume have done, i.e. give portions only of an ancient author, and connect up the passages by an English summary (or translation) of the omitted parts. By this method the pupil with little knowledge of the language is enabled to get some sort of *conspectus* of the whole work which he is reading. It is an interesting experiment, and we heartily recommend the volume to all who do not teach on the Direct Method. The notes, too, are somewhat of a novelty, and a pleasant change from the usual school notes, for they deal with points of historical and literary interest in an unpedantic way which will appeal to schoolboys.

Thucydides. Book IV, Chapters I-XLI: Pylus and Sphacteria. Edited by Dr. J. H. E. CREES and J. C. WORDSWORTH. (2s. 6d. net. Cambridge University Press.)

A preface tells us that this is intended for those who have not long been studying Greek and who have reached the stage of the "First School Examination." Whatever its intrinsic value may be, its soft covers make it unsuitable for school use. We cannot congratulate Dr. Crees upon his English style, as shown in the short introduction which he has prefixed to the book, and the note of cynical worldliness which he strikes more than once, and which he possibly intends to be Thucydidean, is the last thing in the world to put before schoolboys. Mr. Wordsworth's notes are the best part of the book; they are helpful and not wordy.

Collar and Daniell's First-year Latin. Revised by THORNTON JENKINS. (5s. net. Ginn.)

This book should be very useful for those who are unable or unwilling to tackle the more modern methods of Latin teaching. It contains several good features, such as the intelligent use of English derivatives, and the quantities are marked with unusual accuracy (though *magnus* is frequent). Mr. Jenkins has done his work of revision well, but the amount of inspiration which he has brought to it may not unfairly be judged by the fact that he has left the exercises in the form of the old disconnected sentences which we know so well. Two consecutive sentences on page 89 (we quote at random) are: "To all my friends I shall give gifts," and "The leader of the eager horsemen was grieving because of many hardships." And what will the pupil make of the following rule for the ablative absolute construction on page 176? "The ablative of a noun or pronoun, with a participle, a noun, or an adjective in agreement is used to express time, cause, concession, condition or other relations." The book is a reader and exercise book combined, the reading matter being taken from *Caesar* and *Eutropius*, supplemented by some stories—which form the most suitable portion of the reading matter—about the adventures of *Hercules* and of *Ulysses* after the fashion of Ritchie's well known "Fabulae Faciles." If the book can be covered in three school terms it will be the result of sustained and conscientious effort on the pupil's part, and we cannot help feeling that he would have learnt more Latin, with less effort, had only Mr. Jenkins been a little more enlightened as to modern methods of teaching. We might quarrel with small errors—*laboro*, for example, doesn't mean "to work"—but we won't. They are nothing compared with the real defect of the book—lack of inspiration.

The Agamemnon of Aeschylus. Translated by R. K. DAVIS. (4s. 6d. net. Blackwell.)

This is a pleasing little book, well printed on good paper and tastefully bound. Its intrinsic merit is also high. There is real poetry in Mr. Davis's translation, and he is specially to be congratulated upon his rendering of the lyrical passages. He follows no rule as to the nature of the lyrics, but turns each into the English form to which it seems, both by sense and rhythm of the original, to be best suited. The result fully justifies this breaking away from pedantry. Apart from the translation, praise is also due to the brief introduction (only four pages) which gives an admirable outline of the religious teaching of Aeschylus.

T. Macci Plauti Menaechmi. Edited, with Introduction and Notes, by Dr. C. M. KNIGHT. (5s. net. Cambridge University Press.)

The "Menaechmi" is perhaps the most suitable Plautine play for school reading. Apart from the interest of its having been the prototype of "The Comedy of Errors," its subject is one that appeals to schoolboys, and the fun is better than that of the *Captivi*. So it is well to have several school editions from which the teacher may make his choice. We can therefore welcome this edition in spite of the fact that only last year Mr. Thoresby Jones gave us an excellent edition, with introduction and notes, quite suitable for school reading. The two editions are quite independent—Miss Knight's was completed when Mr. Jones's appeared—and Miss Knight has had the needs of schoolboys, who are beginning Plautus, peculiarly in view. There are copious notes and an introduction upon subject-matter and metre. The price seems rather high for a volume of 132 pages.

EDUCATION.

Happiness in the School. By C. W. BAILEY. (2s. net. Blackie's. Library of Pedagogics.)

It is of hopeful significance that Mr. Bailey has dedicated this little volume to the staff of the Holt School, Liverpool. When a head master can write about happiness in school and present the results to his own staff, he has given hostages for his sincerity. The book claims only to present "some practical suggestions for beginners in teaching," and the fair-minded reader will willingly grant that this purpose has been successfully attained. Mr. Bailey, particularly towards the end, becomes just a little too lyrical and could have done all he wanted without the help of the *Valiant Woman*. But it is pleasant to find a man honestly enthusiastic about a fellow author, and, after all maybe, the young readers of the book will appreciate this perfunctory style. For ourselves we prefer Mr. Bailey in his craftsmanship mood, particularly when he gives us such admirable illustrations as we find in his chapter on "A Teacher at Work." Apart from this chapter there is not much that is fresh in the volume; but on the other hand all the points are dealt with in a remarkably fresh and attractive way. A student teacher could hardly find a better way of spending his time than in reading these 85 pages.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

The Nursery School. By MARGARET McMILLAN.
(7s. 6d. net. Dent.)

To anyone who desires to enter into the spirit that should animate a nursery school, and the training of teachers for nursery school work, Miss McMillan's book will come as a boon and a blessing. To those who are still in doubt as to the wisdom of the movement, it may come as a revelation. The author, who by this time is well known as a pioneer in all that pertains to the welfare of children in poor districts, is no less than apostolic in her aims and her outlook. In considering her work, it is scarcely comparing small things with great to think of her as another Pestalozzi, operating amid twentieth century conditions in a poor quarter of London. We should imagine that educational officials find her an extremely troublesome person, difficult to bring within the limits of their regulations, yet well worth humouring and making allowances for. From this point of view, workaday people who have to organize nursery schools will not find her book very useful; but, if they do not find it inspiring, the fault will certainly be theirs. Whether Miss McMillan is dealing with the school or with the teacher, with the various occupations of the children, or with the proper equipment of those who look after the children, she never fails to be suggestive. We do not always agree with her. But who ever did agree at all points with an enthusiastic reformer? And we think that her book would have gained by being considerably shortened. But, on the other hand, she is at any rate never dull. We unreservedly commend the book, based as it is upon first-hand knowledge and experience, to all who are interested in nursery schools.

The Manchester Grammar School, 1515-1915. By Dr. A. A. MUMFORD. (21s. net. Longmans.)

One of the most striking things about this large and remarkable book is that, though it relates the history of a school during four centuries, the author is not a historian by profession, but a medical man, who has obviously lived with and loved his subject for many years. He tells us that his desire was to approach the story of the school, "not so much from the point of view of a historian, critically studying past records, as from that of the naturalist, who, in order to understand the conditions of growth of a living organism, desires to know something of the soil which surrounds its roots, or the circumstances of its early development, as well as the atmosphere which it breathes and the source whence it derives its stimulation." We think it might well be contended that what Dr. Mumford here describes as the point of view of the naturalist is in reality that of the true historian, as distinguished from the mere annalist, and we think that it is just here that the chief value of the book lies. Manchester is fortunate in having the story of its school told, not as a mere local affair, but as a particular example of the general progress of education in this country. The ups and downs of the school are faithfully described, but the wider view of education, from Tudor times down to the present, is never lost sight of. There are signs that a writer inexperienced in historiography might have been overwhelmed by his mass of material; but a good deal that might have interfered with the continuity of the story, and therefore with its interest, has wisely been relegated to a series of appendixes. The book, which we may remark is enriched by a number of good illustrations, seems to us a credit to its author, and to all who have helped him in his arduous task.

The Education Authorities Directory. (September, 1919.)
(7s. 6d. net. School Government Chronicle Office.)

The new edition of this very useful Directory will be welcomed by all educational workers. In addition to its remarkably complete list of Education Committees and the schools under their supervision, it contains exhaustive lists of secondary schools and preparatory schools with principals, of institutions of higher education, and of schools and institutions for special purposes. We hope the Directory will secure the wide circulation its completeness and convenience deserve.

Modern Education in Europe and the Orient. By D. E. CLOYD.
(7s. 6d. net. New York: The Macmillan Company.)

The writer of this book has put together in a convenient form a great deal of information about the educational systems of England, Scotland, France, Germany, Switzerland, Holland, Denmark, Norway, Sweden, Japan, and China. Of course, we have a great deal of material of this kind in the Board of Education's "Special Reports," in Mr. Sandiford's recent volume on "Comparative Education," and elsewhere. Still, there is room for Mr. Cloyd's book, partly because of its comprehensiveness and partly because there is considerable advantage in having each country treated pretty uniformly by one hand. We do not gather that Mr. Cloyd is a travelled reporter, though, indeed, a man must have travelled far to have seen a quarter of what he describes. But he has gone to the best sources for the facts he has garnered. Each

chapter ends with a special bibliography, and with a list of topics for further study. The book is strong on the side of information rather than of comment and criticism. As it was finished in 1917, the part relating to England takes no account of the great changes effected by the Education Act and the Teachers' Superannuation Act of 1918. The book will be found useful by administrators, and in colleges where comparative education is studied.

FRENCH.

La Grande Guerre. Edited by A. WILSON-GREEN.
(4s. net. Cambridge University Press.)

Thirty-eight extracts from five French books about the war, with very short notes in French, make a volume of 182 pages. The sketches describe the personal experiences of the writers, all of whom served in the Army, and they have vividness and reality. They are not so much description and narration, though there is no lack of either, as studies in psychology: the influence of the soldier's life and its trials on the human being is what interests these authors most, and they are not shy, as English soldiers are, of describing their feelings. Most of their pages are written in the minor key, and if the reader, as the editor says, will learn something of the "gaiety" of the French, he will also discover how much sadness and aversion to war underlay that gaiety. Mr. Wilson-Green gives a vocabulary of terms not found in the ordinary dictionaries; this might, with advantage, have been made longer. We note, in the first sketch, *réperage, au stand, crâneur*, and there are other words elsewhere which are not discoverable in school dictionaries. If the volume is intended for schools, by the way, the elimination of a few phrases would be desirable. Though "*La Grande Guerre*" is not altogether easy reading, it would be a good book to give boys to read out of school.

French Tables. By HORACE PUCKLE. (1s. 6d. Bell.)

Mr. Puckle has put the essentials of French accidence, the regular verbs excepted, in tabular form on six pages, measuring ten inches by seven, a form which offers great conveniences for both learning and reference. The student can have the whole of the irregular verbs spread out before him. We offer one criticism: the order of the object-pronouns is surely better remembered by getting a few examples by heart than by means of a jingle. We note, too, that the rule for two pronouns after an imperative—e.g. *donnez-le-moi*—is not mentioned. Some useful hints to examination candidates are appended. Mr. Puckle is a great believer in notebooks, and gives valuable advice about their use. "First and foremost, learn words" is particularly sound; but "derive as much as possible from Latin" seems to us dangerous. But Mr. Puckle has had twenty-five years' experience of preparing boys for examination, and it is therefore rash to disagree with him.

GEOGRAPHY.

Philips' Smaller School Room Map of Europe. Scale 1: 6,000,000 (approximately 100 miles = 1 inch). (7s. 6d. net.)

This useful wall map (40 × 30 in.) shows clearly the rearrangement of States in Central Europe in accordance with the terms of the Peace Conference of last July. The outstanding features of the map are (a) the Countries of Russia, Germany, Hungary and Austria, shorn of their lost provinces; (b) the territories of the new governments of Czecho-Slovakia, Poland, Jugo-Slavia and Ukraine; (c) the provinces, Schleswig-Holstein and others in which the government is to be decided by plebiscite. By comparing this map with a pre-war map of Europe, an interesting study of the political changes due to the war can be made. The chief railway routes are marked in red and steamship routes (with distances in nautical miles) in blue. The map is well printed and effectively coloured.

A Regional Geography of Africa and Europe. By L. BROOKS.
(6s. University of London Press.)

The three volumes in this series—the Americas, Asia and Australasia, Africa and Europe—provide a regional study of the land areas of the world, suitable for those who are preparing for the London Matriculation and other school examinations. Book III is divided into sections dealing with Africa, the British Isles, and Europe respectively. The natural regions are pointed out, and the physical structure, climate, and vegetation of each region are carefully described. Special attention may be directed to the chapter in which "some African problems" are discussed, and to the paragraphs throughout the book in which town sites are analysed. As regards the political geography of Europe, the recent changes in the boundaries of the various States are indicated, but a more detailed treatment of the new States is rightly left for a future edition. The text is illustrated with seventy-six diagrams and maps. Many of the maps have no lines of latitude and longitude, and in some cases the omission almost takes away the value of the illustration. For example, without the Equator and Tropics, it is of little use showing the areas of equatorial forests and tropical monsoons on an outline

map of Africa. Again, in a large number of maps, the initial letter of a town only is printed, and so the map becomes a kind of puzzle. In the map of the Midlands and Trent Basin (Fig. 38) the letter B occurs six times, and the reader has to decide whether it stands for Birmingham, Burslem, Burton, Bedford, Boston, Banbury, or some other town beginning with that letter.

The Kingsway Book of Geography Lessons. Third Stage:

Vol. I. By R. J. FINCH. (4s. 6d. net. Evans.)

The author of this volume states that "in third stage geography the attention of pupils is particularly directed to the study of selected areas," but he does not indicate the scheme of geography of which this is the third stage. The selected areas dealt with in this book are the Monsoon Lands of Asia, North America, Canada, West Indies, the three southern continents, and to these are added the great trade routes. The descriptions are well written, and they contain much interesting information. Mr. Finch is at his best when describing an Indian village, the Uspallata Pass in the Andes, Round the Horn in a Wind-jammer, and other subjects of great interest to boys. It is a pity that such good descriptions have no pictures to illustrate them. There are twenty-three maps, but they are not always helpful in explaining the text. For example, it is stated that "the variety of crops in Japan depends on the all important fact that Japan extends through thirty degrees of latitude," but in the map (page 63) no lines of latitude are inserted.

Shropshire: The Geography of the County.

By Prof. W. W. WATTS. (Shrewsbury: Wilding & Son. 2s. 6d. net.)

This attractive book is from the pen of an author who knows his subject thoroughly. Prof. Watts calls his book "The Geography of the County," but he uses the term "geography" in a very wide sense. He explains the physical geography, the geology, the vegetation, manufactures, and many other features of the county, in so interesting a manner that, as we read on, everything he mentions (even antiquities and ecclesiastical architecture) seems to have a geographical setting. The book is profusely illustrated with beautiful pictures, and there are many good diagrams and sketch-maps. This geography should certainly be studied in all schools in Shropshire, and it should also be read far beyond the boundaries of that county.

"The Human Geographies."—Book IV: *The New World.*

By J. FAIRGRIEVE and E. YOUNG. (1s. 9d. Philip.)

This book is a very suitable textbook for junior forms, as every difficult point is made clear by means of sketch-maps and pictures. The essential features of North and South America are carefully described, with particular reference to the activities of the people. Chapters headed "Chicago and Meat," "Winnipeg and Wheat," "Amazon and Rubber" sufficiently indicate the method of treatment. In referring to the growth of New York (page 26), no mention is made of the Erie Canal in relation to its commercial development. Irish or Dublin time is referred to more than once (pages 86-9); is not this officially a thing of the past?

HISTORY.

The Outline of History: being a Plain History of Life and Mankind. By H. G. WELLS. Part 1, Book I. (1s. 2d. net. Newnes.)

Mr. Wells never set himself a more ambitious task than when he undertook, as he puts it, to tell truly and clearly, in one continuous narrative, the whole story of life and mankind as it is known to-day: how our present state of affairs arose in the course of vast ages, and out of the inanimate clash of matter; and to estimate the quality and amount and range of the hopes of mankind. Beginning with the early history of our earth as revealed by modern astronomy and geology, his prose epic—for it is nothing less—will go on to the origin of life, the procession of animal and plant races through the ages preceding the appearance of man, the problem of human ancestry, the beginnings and development of civilization; and will survey the rise and fall of religions and empires down to the present day. All this is to be brought, by broad and comprehensive handling, into an account, within the normal limitations of time and energy, set to the reading and education of an ordinary citizen. The scheme will assuredly be a success if later instalments bear out the promise of Part 1. This deals with "The Making of Our World," and gives an admirably succinct account of the general course of events as far as the appearance of the first mammals. It is beautifully printed, and is enriched with numerous drawings—some of them in colour—of extinct reptiles and birds, and of palæozoic landscapes. Needless to say, the language throughout is clear and arresting and a model of terse exposition. The whole work is to be completed in about twenty fortnightly parts.

Odham's A.B.C. of the Great War. Compiled and Edited by E. W. COLBROOK. (6s. net. Odhams.)

Multitudes of people, whose memories are vague respecting the
(Continued on page 62.)

Cambridge University Press

RECENT PUBLICATIONS

A Short History of Education

By J. W. ADAMSON, Professor of Education in the University of London. Demy 8vo. 12s 6d net

This book treats primarily of English education and its agencies. It sets forth briefly the progress of English educational institutions, taking account of such domestic and foreign conditions as have had a direct bearing upon English education. The earlier chapters of the book are less specifically English than the later. But, beginning with the fifteenth century, the narrative becomes increasingly English in its survey; it closes at the opening of the twentieth century.

The Purpose of Education

An Examination of the Education Problem in the Light of Recent Psychological Research. By ST GEORGE LANE FOX PITT. Crown 8vo. 7s 6d net

A new impression of the second edition, bound in cloth. The volume contains a Preface by Professor EMILE BOUTROUX, a Reply to Critics, and an additional chapter, Perfection as the Ideal and Lessons of the War.

"The author has done remarkably well with an admittedly difficult subject, and this book should be read by all who affect the welfare of the nation passing through the sieve of our elementary and secondary schools."—*The Schoolmaster*

Principles and Method in the Study of English Literature.

By W. MACPHERSON, M.A., Inspector of Schools to the Bradford Education Committee. New and enlarged edition. Crown 8vo. 5s net

The author's chief aim in this book, which is written from the teacher's point of view, is to show how English literature, as it appears in the work of the best writers, may be effectively studied and rightly appreciated. In this edition the number of pages has been more than doubled, the original matter has been revised, and a large amount of new subject-matter added.

Aspects, Aorists, and the Classical Tripos.

By JANE ELLEN HARRISON, LL.D., D.Lit., Fellow of Newnham College, Cambridge. Demy 8vo. Paper covers. 2s 6d net

The author maintains that we need both the Greek and the Russian spirits to enjoy our humanity fully, and that in an ideal Classical Tripos the student would be allowed to choose two tongues, one ancient and one modern, preferably Greek and Russian.

An Advanced Latin Syntax.

By A. L. FRANCIS, M.A., late Head Master, and H. F. TATUM, M.A., late Assistant Master, Blundell's School, Tiverton. Crown 8vo. 7s net

This work is an attempt to deal in a short compass with late and exceptional idioms of Latin, and to bring them into harmony with the principles of the language. It is based on Roby and Riemann, and the authors owe some debt to the notes in Papillon's Virgil, Duff's Juvenal, and other editions; but the whole of the plan and conclusions, as well as a considerable part of the argument and materials, are their own.

Plautus: Menaechmi.

Edited, with introduction and notes, by CLARA M. KNIGHT, D.Lit. Extra fcap. 8vo. 5s net. Pitt Press Series

Key to Exercises on Rules for Latin Prose.

By T. C. WEATHERHEAD, M.A. Crown 8vo. 7s 6d net

An Introduction to the Study of Rocks under the Microscope. By A. HARKER, F.R.S., F.G.S. Fifth edition, revised. Crown 8vo. With 100 text figures. 8s 6d net. Cambridge Geological Series

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

crowded events of the five tumultuous years 1914-1919 will be glad to refresh them from time to time, as occasion arises, from the pages of this book of ready reference. It gives, under headings arranged in alphabetical order, concise information concerning every first-class event in the war, and concerning every person who played a prominent part. Sometimes the summaries reach the dimensions of short articles. Under "Verdun," for example, is given a sketch of the siege which could easily be expanded by a skilful writer into a vivid descriptive narrative. Under "U," again, is presented information respecting submarines 3 to 39 which sets the imagination to work. Comparison of this alphabetical guide with the index of Lord Edward Gleichen's "Chronology of the War," shows a few omissions (e.g. the Battle of Tannenberg), which might be filled up in future editions.

Britain and Greater Britain in the Nineteenth Century. By E. A. HUGHES. (5s. net. Cambridge University Press.)

Mr. Hughes has produced a thoughtful, well-informed, and interesting history of Britain and her Empire during the period following the overthrow of Napoleon and the pacification of Vienna. It is intended not only as a textbook for the upper forms of schools, but also as a handbook for the general public whose curiosity concerning the immediate antecedents of present-day politics has been roused by the tremendous upheaval through which the world has just passed. The book is divided into two parts, the first dealing with Great Britain and Ireland, the second with the Overseas dominions. It would have been an advantage if those two parallel threads could have been woven into a single narrative; for the interaction of domestic and imperial politics was constant and of increasing importance. Mr. Hughes's arrangement has, however, some compensating merits. It conduces to simplicity and lucidity, even though the simplicity be artificial and the lucidity devoid of perspective. Mr. Hughes concentrates his attention upon great movements, e.g. democracy, industry, science. He is thus able to give a vivid sketch of essentials in a comparatively short compass.

Origin of Government. By HUGH TAYLOR. (10s. 6d. net. Blackwell.)

Mr. Taylor is a student of biological science who before the war wrote a book entitled "Government by Natural Selection," whose principles and predictions received striking confirmation during the course of the great struggle. He now returns to his theme, strengthened in his convictions and with increased knowledge, and he now discusses from the same point of view the "Origin of Government," and the causes which make government necessary. His thesis is closely akin to that of Prof. Huxley in his famous Romanes Lecture on "Evolution and Ethics." He shows that "Natural Selection" is devoid of all moral character, and that man has risen in the scale of civilization only in so far as he has organized his powers to modify the processes of insensate nature. Hence has arisen government, and hence springs the constant need of its continuance. Mr. Taylor's book, excellently written and full of thought, is a powerful plea for the ordered rule of conscience and intellect in the community. It may be cordially commended to the consideration of anarchists, syndicalists, and guild-socialists. It supplies a missing factor in their political philosophy.

"The Story of the English Towns Series."—(1) *Leeds.* By J. S. FLETCHER. (2) *Sheffield.* By J. S. FLETCHER. (3s. 6d. net each. S.P.C.K.)

The S.P.C.K., with commendable enterprise, has planned "a series of popular, but scholarly, histories of English towns, designed primarily for the general reader, but suitable also for use in schools." The first two volumes of the series lie before us. Both are from the pen of Mr. J. S. Fletcher, who has deservedly won a high reputation both as an authority upon Yorkshire history and also as a skilled and interesting writer. The history of Leeds and the history of Sheffield which he has now compiled will undoubtedly add lustre to his fame. They are models of what such short and popular sketches should be. Though slight, they are accurate. Though succinct, they are well proportioned. Each begins with a summary account of the mediæval township or manor, which developed later into the great industrial centre. Each then traces the rise of the craft—wool in the one case, iron in the other—which made the fortune of the later city. Maps, plans, and pictures enhance the value of these attractive little books.

Henry the Sixth. A Reprint of John Blacman's Memoir, with Translation and Notes by Dr. M. R. JAMES. (5s. net. Cambridge University Press.)

John Blacman, the author of this memoir, or eulogy, of Henry VI, was, during the middle period of the fifteenth century, successively Fellow of Merton College Oxford, Cantor of Eton, Warden of King's Hall, Cambridge, and finally a Carthusian monk at Witham and in London. He was at one time spiritual director or confessor

of the saintly king, and he acquired an intense veneration for his character which was, indeed, more adapted to the cloister than the court. He wrote his panegyric some time between the date of the king's death and the accession of Henry VII—that is, within the years 1461-85. No manuscript of the work is known to exist; there are, however, two extant copies of a printed version issued in 1510, and more numerous examples of a reprint made in 1732. But even these reprints are scarce, and the work has been long almost unobtainable. It was appropriate that the work of reissue should be undertaken by Dr. James, Provost of Eton, and till lately Provost of Kings—the two foundations of the pious monarch. The translation is a fine piece of work, a model of its kind, and the notes are luminous of scholarship.

MATHEMATICS.

Elementary Calculus. By C. H. P. MAYO. (10s. Rivingtons.)

As a textbook on the Calculus written for the use of schools, this may be regarded on the whole as presenting the subject in a satisfactory manner. Beginners cannot appreciate the logical subtleties which beset the foundations until they have obtained a good working knowledge of the leading principles and their main applications. The book, however, contains some errors, and there are several statements which may tend to produce erroneous ideas. The treatment of limits is admittedly superficial, but we think that some warning should be given that the limiting value of a function depends upon the way in which the variable approaches the limit; e.g. $\lim_{x \rightarrow 1^+} (e^{\tan x} - 1)/(e^{\tan x} + 1)$ is -1 or $+1$. The example on page 8 certainly suggests that the value of an indeterminate form is its limiting value. This is not necessarily the case. The method of integrating $(x^2 + a^2)^{-\frac{1}{2}}$ on page 234 is rather old-fashioned, and the forms given for the integrals of $\sec^2 x$ and $\operatorname{cosec}^2 x$ on page 244 are needlessly complex. The author is very unlucky in his treatment of Simpson's rule, as the worked examples would lead one to think that it is of little value. The rule is valid for cubic functions, not merely for quadratic functions of the variable. The arithmetic, in the examples on pages 214, 215, is incorrect. The rule gives, as it should, the value of $\int x^2 dx$ exactly, and of $\int_0^{180} \cos \theta d\theta$ with an error of about three millionths.

Introduction to Statistical Methods. By Prof. H. SECRIST. (10s. 6d. net. New York: The Macmillan Company.)

The reproach frequently levelled against statistics, that they can be made to prove anything, merely implies that the personal factor plays an important part in their manipulation and interpretation. As the writer of this excellent introduction to the subject insists, judgment, candour, and integrity are necessary at every step, and above all in the assembling of the data which are to be submitted to analysis. The book discusses the collection of the raw statistical material, its presentation in tabular, diagrammatic or graphic form, the meaning of averages as types, the principles of index number-making and using, and, finally, the discovery of relationships between different groups of statistics by the methods of correlation. The treatment is non-mathematical, but ample references are given to the authorities whose mathematical investigations form the basis of the methods employed in statistical analysis. The illustrative examples are naturally drawn from American sources, but they deal with matter common to all civilized communities.

Projective Vector Algebra. By L. SILBERSTEIN (7s. 6d. net. Bell.)

The sum of two coincident vectors OX , OY is usually defined as the diagonal OA of the parallelogram of which OX , OY are adjacent sides. Let T_x , T_y be the points on the line at infinity at which OX , AY and OY , AX meet. If this figure be projected in a suitable manner, T_x , T_y becomes a line in the finite part of the plane, and we have Silberstein's fundamental construction. He now calls OA the vector sum of OX , OY with respect to an arbitrarily fixed T -line. Anyone acquainted with projective geometry will find it interesting to deduce the theorems which follow and relate almost exclusively to additive and equality properties of vectors as here defined, from the corresponding familiar theorems in ordinary vectorial geometry. An appropriate algebraic method of expressing the results is worked out concurrently, and we have, in fact, an algebra of vectors independent of the axioms of congruence and of parallels.

RELIGIOUS KNOWLEDGE.

A Commentary on the Bible. Edited by Prof. A. S. PEAKE. With the assistance for the New Testament of Dr. A. J. GRIEVE. (10s. 6d. net. Jack.)

The one-volume commentary on the Bible edited by Dr. Peake is really admirable. It combines the best scholarship available with the conditions that go to make a work at once comprehensive

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

and popular. This is a remarkable achievement, and the editor is to be congratulated warmly on the skill with which he has brought within the covers of a single volume the work of sixty-one contributors, all of them scholars of distinction. A short commentary, with introduction and a bibliography, is provided for every book in the Old and New Testaments. In addition, there are valuable introductory chapters on such subjects as: "The Bible—its Meaning and Aim," "The Holy Land," "The Development of Old Testament Literature," "The History of Israel," "The Religion of Israel," "The Social Institutions of Israel," "The Language of the New Testament," "The Text and Textual Criticism of the New Testament," "Jewish History from the Maccabees to the Destruction of Jerusalem," "The Roman Empire in the First Century," "Pagan Religion at the Coming of Christianity," "The Religious Background of the New Testament," "The Life and Teaching of Jesus," "The Synoptic Problem." These are but samples. There is also a useful series of maps at the end of the volume, and the usefulness of the whole rich collection is much enhanced by a full and minute index. The volume runs to more than a thousand double-column pages, and is published at the amazing price of 10s. 6d. It deserves, and we hope will secure, the widest possible circulation. The time is ripe for a large popularization of the new knowledge that has been accumulated about the Bible by the devoted labours of modern scholarship. It is unfortunately true that, in spite of this, popular ignorance and misapprehension of the noble literature included in the Bible is widespread and profound. There is a growing demand for enlightenment which ought to be met by organized effort on a wide scale. Something has been done in this direction, but it amounts to little in comparison with what remains to be achieved. It is a matter of vital urgency that a general view of the Bible should be disseminated that will make it intelligible to modern people. For this purpose Dr. Peake's volume will prove of inestimable service. The intelligent reader who will patiently work through this commentary with the Revised Version will receive a discipline which will prove a real education, and the study of Scripture will, we venture to predict, become to such a source of unfailing interest and delight.

SCIENCE.

"The New Teaching Series."—*The Foundations of Engineering*. By W. H. SPIKES. (4s. 6d. net. Hodder & Stoughton.)

The scheme of this book includes both mechanics and heat, and the author has touched upon a very large number of subjects in the 248 pages containing the text. It is not easy to place a book of this kind in its proper niche. Judging from the preface, the author has had in view everyone who desires to be in a position to follow the daily developments of engineering and to have an intelligent understanding of the way things work. "Yet the young working engineer cannot afford to pass such a book by." A book produced with diverse aims such as these runs the risk of being repudiated by both classes for whom it is intended. The treatment is much too scanty in many respects to be of value to the young engineer, and the absence of experimental work renders the volume useless for class purposes. On the other hand, many parts of the book would be read with difficulty by the man who wants merely a nodding acquaintance with engineering, and the absence of pictures showing the actual appliances will not be appreciated by him. We can, however, imagine a student of mathematical science, fed on bookwork which does not appeal to him, to whom the volume might be of service, in showing him some ways in which his principles are applied in practice.

A Preparatory Course to Machine Drawing: a Two-Years' Course for Day and Evening Technical Schools. By P. W. SCOTT. (1s. 9d. net. Pitman.)

This book is intended to cover the first and second year's courses in junior technical and branch technical evening schools. It contains explanations of the principles of orthographic, oblique, and isometric projection, as well as hints on sketching and some plane geometry exercises. The examples given for drawing practice are, for the most part, suitable for exercises in woodworking. The sketches supplied are clearly drawn and dimensioned, and should be of service to beginners, although we think that an excessive use of oblique projection has been employed in them.

"The New Teaching Series."—*Chemistry from the Industrial Standpoint*. By P. C. L. THORNE. (4s. 6d. net. Hodder & Stoughton.)

This book is an early member of a new series—boldly labelled "The New Teaching Series of Practical Textbooks," and written to satisfy the needs of the curriculum of the next few years. Moreover, this series is written by teachers "gifted with the inspiration of the hour's occasion," and its orientation is towards the realities of life. These are brave words. Coming, however, to bedrock, the series is "out for" the new continuation schools,

since the standard of attainment which is presupposed is that of the ex-elementary schoolboy, and further, considerable stress is laid on the advantages which will accrue from a series which "makes a natural appeal to the interest of the student"—who is deprived of the benefits of an examination system which, whatever its faults, does provide stimulus, at any rate. The volume before us represents an attempt to teach a sort of chemistry by means of references to a set of manufacturing operations. Why, for instance, should a dry résumé of the Le Blanc process be superior to the hitherto recognized method wherein the student prepares for himself, or has demonstrated to him, the preparation of sodium sulphite, hydrochloric acid, and sodium carbonate? At the end of the specified period, what more has been achieved than the perusal of a school reading book? for that is, perhaps, the fairest description of Mr. Thorne's effort. It is certainly not science, for the student neither measures, nor observes, nor does he draw conclusions. He is merely informed.

The Profession of Chemistry. By R. B. PILCHER. (6s. 6d. net. Constable.)

Mr. Pilcher discusses pleasantly, and with a wealth of information, how our son (and daughter) may be turned into a chemist—not, be it understood, the dispenser of patent medicines, fancy goods, and stationery who in this country frequently appropriates the title, but into a *bona fide* practitioner of the science. The author, with a temerity for which he properly apologizes, commences by discussing with schoolmasters their curricula, and points out the fundamental importance of a broad and general foundation on which to build the later structure. There follows an admirable piece of historical writing anent the gradual assumption by the apothecaries of the term "chemist"; and here it may be said, in passing, that the author's deep and wide reading makes of an apparently dry-as-dust subject a most entertaining and interesting essay. Naturally and properly, the Registrar of the Institute of Chemistry directs attention to the importance of the professional training brought into being and fostered by his Association. From the point of view of the parent, perhaps the last chapters are the most important, and these discuss the future prospects of the trained chemist in industry, in public or private practice, and in teaching; whilst a short account of the effect of the application of chemistry to war emphasizes the importance of a trained, scientific personnel. Altogether the book is one which every teacher of chemistry should possess, and every potential chemist and his father should read.

VERSE.

Mystica et Lyrica. By C. BRERETON. (6s. net. Mathews.)

Mr. Brereton has given us some real poetry, not disguised because he chooses to call it "Mystica et Lyrica." He divides his little book into sections under these headings, the earlier and larger part being reflections, mostly on the more modern metaphysics, by no means of the kind likely to add him to the list of poets called popular; the second part bringing him into more immediate contact with the ordinary verse-loving person. His first poem, inscribed to Prof. Bergson, gives us a key-note, the "Crime of Creation," set forth by Anima Naturalis, and shown by Anima Divina to be no crime at all, but a rescue from non-being through love—a striking poem written in an appalling metre. In "Pilgrims" is the same noble story:

" . . . the Earth herself is sanctified
By what her sons have suffered, that their blood
Her deepest wounds makes good,
And lo! before their dying eyes
A sudden glory o'er the landscape broke.
The stony road,
Paved with unearthly splendour, glowed,
And Earth threw off her penitential cloak
Transfigured with the light of Paradise."

Mr. Brereton no doubt feels, with a good many people, that there is no rational proof of reason itself, and that the great truths of life are born with us and borne into us, like the foundations of reason itself, by some means which cannot be properly described in terms of sense. Hence his mysticism and his many inspiring illustrations of the claims of mysticism to a hearing. He is happy enough, but not so happy, in his "Lyrica." Here he is on ground on which poets throng more thickly. He tries his hand, and with a great measure of success, on many poetic forms, and not least so when he sings of Norfolk and Norfolk men. He has a large and generally accurate command of the *mots justes*; but exception will be taken to his queer use of *cerements*, such odd rhymes as *tryst* and *mist*, *feign* and *profane*, and the ugly unpoetic *commence*. But he almost always sees Nature in pictures painted with marked accuracy as well as feeling. One word of serious deprecation. He has a good claim to be taken as a poet on his

(Continued on page 66.)

THE EFFICIENT AND SUCCESSFUL CORRESPONDENCE COLLEGE.
(FOUNDED 1889.)

THE NORMAL CONVERTS YOUR STUDY INTO A UNIVERSITY.

Founded nearly thirty years ago by teachers for teachers, the Normal stands to-day a monument to the fact that at its inception it was based upon right principles and built on sound methods. The Normal has stood the test of time, and is firmly established as the most reliable Correspondence College. The keystone of the Normal is the concentration of the efforts of most highly qualified and experienced Tutors on the requirements of the individual student. Thus the Normal converts your study into a University.

LECTURE RECITALS by Mr. ADRIAN HARLEY

1920. "The Tempest," "Hamlet," &c.

H. NICHOLSON, Esq., M.A., Head Master of Watford Grammar School, writes: "The Recital given by Mr. Adrian Harley was eminently successful. The introductory lecture upon the Shakespearean stage was extremely lucid and most attractively given. He held the interest of the boys from start to finish. The lecture has been of real service to us."

DISCOVERY

A MONTHLY POPULAR JOURNAL OF KNOWLEDGE

PRICE **6d.** NET.

Edited by **A. S. RUSSELL, M.C., D.Sc.**

Trustees: Sir J. J. THOMSON, O.M., P.R.S.; Sir F. G. KENYON, K.C.B., P.B.A.; Prof. A. C. SEWARD, Sc.D., F.R.S.;
Prof. R. S. CONWAY, Litt.D., F.B.A. Chairman of Committee: THE REV. CANON W. TEMPLE, D.Litt.

On the 15th of January, 1920, Mr. John Murray will publish the first number of a new monthly journal that has for its aim a popular description of the advance made in the chief subjects in which investigations are being actively pursued.

The articles, singly or in a series, will deal with their subjects in such a way as to make clear the interesting features in the discoveries with which they deal, and will be written in plain, simple language by contributors who can speak with authority in their own branch of knowledge, so that the teacher or general reader who has no time to pursue specialised study—or, if he has, can do so in only one subject—will be able to obtain at first hand an account which he can understand of the chief things which experts are doing or have done in all the chief branches of knowledge.

The following writers, among others, have promised to contribute to early numbers of DISCOVERY:—

Professor W. BLAIR ANDERSON (Latin and Roman Archæology).
Professor E. V. ARNOLD (Vedic Research).
DONALD ATKINSON (Roman Britain).
Professor A. T. BAKER (French Literature).
Professor W. LAURENCE BRAGG (Physics).
Dr. RUDMOSE BROWN (Geography).
Professor W. M. CALDER (Greek).
GEOFFREY CALLENDER (Naval History).
Professor R. S. CONWAY (Latin: Comparative Philology).
Miss WINIFRED CROMPTON (Egyptology).
C. G. DARWIN (Physics).
Professor EDMUND G. GARDNER (Italian Studies).
Professor W. R. HALLIDAY (Greek).
J. W. HEADLAM-MORLEY (History).
Dr. J. KENNER (Chemistry).
Professor Sir SIDNEY LEE (English Literature).

Professor F. A. LINDEMANN (Einstein's Theory).
A. G. LITTLE (St. Francis).
C. H. K. MARTEN (History).
Professor GILBERT MURRAY (Greek).
Professor J. L. MYRES (Ancient History).
Sir HENRY NEWBOLT (English Literature).
L. V. D. OWEN (History).
Professor T. H. PEAR (Psychology).
Dr. T. S. PRICE (Chemistry).
C. GRANT ROBERTSON, C.V.O. (History).
Professor J. G. ROBERTSON (German Studies).
Professor W. ROTHENSTEIN (Civic Art).
A. L. SMITH, Master of Balliol College, Oxford (History).
Professor F. SODDY (Chemistry).
Professor M. V. TROFIMOV (Russian Literature).
Dr. W. E. S. TURNER (Glass Technology).
Dr. H. B. WORKMAN (History).

EDUCATED GIRLS TRAINED as TEACHERS of Drill, Gymnastics, Games, Dancing, Fencing, Swimming, Massage, and Remedial Exercises. A four terms' course in Massage only can be taken separately. Apply for prospectus to The Misses BEAR, Principals.

PORTLAND ROAD GYMNASIUM, London, W.—Students thoroughly trained for Public Examinations. Duration of Course, 2 to 3 years. All branches of Physical Work. English and Swedish Gymnastics, Hygienic Exercises, Dancing, and Remedial Work.—Miss TOLLEMACHE, Member and Examiner of the British College of Physical Education, M.G.T.I., Kyson, Highcroft Gardens, Golder's Green, N.W. 4.

BEDFORD COLLEGE OF DANCING AND PHYSICAL CULTURE.

The Crescent Studios, 4a The Crescent, Bedford.

MISS MILDRED BULT receives resident and non-resident students to train for the profession. A thorough training in Technique in all branches of Dancing and in Class Teaching given.

The course includes Drill, Gymnastics, Fencing, and Voice Production. Students live in the Principal's pleasant private house and have every home care and comfort. For Prospectus apply—Miss BULT.

THE BERGMAN ÖSTERBERG PHYSICAL TRAINING COLLEGE, Kingsfield, Dartford Heath, Kent, and the BERGMAN ÖSTERBERG UNION OF TRAINED GYMNASIAC TEACHERS.

See advertisement on page 71.

COACHING, CORRESPONDENCE LESSONS, &c.

MISS M. MURDOCH, L.L.A., Coaches by Correspondence in French, History, English Language, and Literature, and Comparative Religion for Cambridge and Oxford Locals and other examinations.—The Rectory, Little Stukeley, Huntingdon.

EDUCATED GIRLS thoroughly trained for permanent and well paid Secretarial and Journalistic Appointments. Prospectus—Miss IRONSIDE, Training Bureau, 50 Lincoln's Inn Fields, W.C.2.

COACHING by Correspondence.—London Graduate (French Honours) can take a few students requiring extra help up to London Intermediate standard. Terms moderate. References.—Miss H. STRACHAN, 23 Longstone Road, Eastbourne.

MISS DYMPHNA SMITH'S EDUCATIONAL DEPARTMENT, 231 ENURY STREET, S.W.1.—Principals needing good ASSISTANT MISTRESSES, now or in the future, should apply The REGISTRAR, as above. Private Governesses also supplied. (Miss Dymphna Smith interviews applicants personally, 11 to 1, or by appointment.)

MR. JAMES BATES will give a course of ten Lecture-Lessons to teachers and choir trainers on "Children's Voice Culture" at the Royal Academy of Music, Marylebone Road, N.W. 1, on Saturday mornings at 10.30. Full particulars upon application to Mr. BATES.

SWEDISH BOOM FOR SALE, 8 1/2 ft. x 11 ft. One upright, portable. Never been used. On view at North of England School Furnishing Co., Darlington. Apply—BARBER, Carr Hill, Sleights, Yorks.

LECTURES ON ART. Single or in Series. London and the provincial capitals. For prospectus and terms address—Miss A. ROBERTSON, 45 Paulton's Square, Chelsea, S.W.3.

THE ENGLISH FOLK DANCE SOCIETY.

Hon. Director: CECIL J. SHARP.

A VACATION SCHOOL of Folk Song and Dance will be held at York from April 3rd to 10th, 1920. For full particulars apply to the SECRETARY, E.F.D.S., 7 Sicilian House, Sicilian Avenue, Southampton Row, W.C.1.

The Revised Scale for Posts Wanted or Vacant will be found on page 93.

SPECIAL Correspondence Courses in the L.R.A.M. and A.R.C.M. paper work. (187 Correspondence Students successful at these examinations).—Mr. E. H. BIRBY, Mus.Bac., c.o. Forsyth Bros., Deansgate, Manchester.

DR. ETHEL R. SPRATT, D.Sc., A.K.C., sometime lecturer in Botany, University of London, gives tuition personally or by correspondence in Mathematics, Science, and general subjects. —47 Beryl Road, Hammersmith, W.6.

ELOCUTION AND SINGING—CORDELIA COE (Cert. R.A.M.), of Albert Hall, Queen's Hall, and principal London Concerts, gives Private Lessons. Schools attended. Plays produced. Apply by letter—63 Biddulph Mansions, Maida Vale, W.9.

Speech Training and Elocution.

MISS LAURA SMITHSON, L.R.A.M. Elocution A., Director of Stratford-on-Avon Shakespeare Festival Summer School of Education. Recommended by Sir Frank Benson, Miss Lilian Baylis, Ben Greet, Esq., William Poel, Esq. Elocution, Voice Production and Dramatic Training. Pupils prepared for L.R.A.M. Elocution Diploma. Schools near London visited. Stammering and other defects of Speech treated. Address—109 Abbey Road Mansions, N.W.8. North Country towns, including Newcastle-on-Tyne (Conservatoire of Music) visited weekly by Miss IVY SMITHSON.

L.R.A.M. and A.R.C.M. Teaching. Singing Exams. Special Correspondence Course and personal tuition. Complete preparation. Pupil writes: "Your Course is excellent, and my singing work has greatly improved, thanks to your tuition.—A. F."—Mr. W. LEE WEISTER, L.R.A.M., A.R.C.M. (Teaching Singing), 22 Lucknow Avenue, Nottingham.

Some official announcements will be found at the top of pages 70 and 77.

COMBINED RECITAL OF VOICE AND MUSIC.

Miss LAURA SMITHSON, L.R.A.M., Elocution (Double Diploma).
Miss LAURIE O'BEIRNE, L.R.A.M. (Performer), Silver Medallist
R.A.M., Violinist.

VOICE and MUSIC illustrating the
various **PERIODS** from the 16th
CENTURY to the PRESENT DAY.

Elocution and Violin Recitals can be given separately.

Full particulars of terms, &c., from
Miss LAURA SMITHSON, 109 Abbey Road Mansions, N.W. 8;
or Miss LAURIE O'BEIRNE, 20 Queen's Road, N.W. 8.

Phone: Hampstead 5227.

BOOKS BOUGHT AT GOOD PRICES.

MR. MURRAY'S NEW SCHOOL BOOKS.

By R. B. MORGAN, M.Litt., Author of "A NEW ENGLISH GRAMMAR," now in its Sixth Edition (57th thousand.)

EXERCISES IN ENGLISH GRAMMAR. 1/9

The demand expressed by teachers for additional exercises of the same interest and cheerful character as those which have made the parent book so popular has induced the author to compile this volume of Exercises. (Now ready.)

By E. E. KITCHENER, M.A., Author of "ENGLISH COMPOSITION."

EXERCISES IN ENGLISH COMPOSITION. 1/9

This little book has been written primarily to help those teachers who, while preferring to use no regular text-book in composition, feel the need of a collection of material for practice. As a companion book to the author's "ENGLISH COMPOSITION," it follows a similar plan and arrangement; but it will be found capable of being used with any other text-book or scheme of work. (Now ready.)

By G. KESSEN BUZZA, B.A., and E. E. HURT, B.A.

LA LANGUE FRANÇAISE: 3/6

Grammaire à l'usage des classes moyennes et supérieures.

This book is intended for pupils in their Third and Fourth Years of French. Its principal aim is to expose the grammatical pitfalls into which they are prone to fall owing to their following the English mode of expression. (Now ready.)

By W. MANSFIELD POOLE, M.A.

GRAMMAIRE FRANÇAISE ÉLEMENTAIRE. 3/-

New and Revised Edition. 25th Thousand. The exercises have been almost entirely rewritten.

A complete catalogue of Mr. Murray's Educational Works will be sent on application.

LONDON: JOHN MURRAY, 50a ALBEMARLE STREET, W.1.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

Rector: Admiral Sir DAVID BEATTY, G.C.B., G.C.V.O., D.S.O.

Principal and Vice-Chancellor: Sir J. ALFRED EWING, K.C.B., M.A., D.Sc., LL.D., F.R.S.

Secretary of the University: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Summer Session** extends from about the middle of April to the end of June; in Law, from May to July.

The **Winter Session** opens about the beginning of October and closes about the middle of March.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Degree of M.A.** (Honours and Ordinary), the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the combination of Arts, Science, Medical, or Special Studies; and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Lit., D.Phil., and D.Sc. are conferred. The Degree of **Bachelor of Education** is conferred on candidates who have attended Courses and passed Examinations in Psychology and in Education (Theoretical and Practical). A Diploma in Education is also conferred. A Degree of **Bachelor of Commerce** (B.Com.) has been recently instituted, and Special Courses in Industrial Law and other kindred subjects are being provided. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering, Public Health, and Veterinary Science**; and the Degree of B.Sc. in **Agriculture and Forestry**. Temporary Regulations have been framed for a **Diploma** and a **Certificate in Forestry** for the behoof of Officers and men who have served in the War. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The **Law Faculty**, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.); and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There are also **Diplomas in Public Health** (D.P.H.) and in **Psychiatry** (Dipl. Psych.). In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 44 Professors, over 90 Lecturers, and about 60 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £21,485. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in all the Faculties, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the **DEANS OF THE FACULTIES**, or from the **CLERK OF SENATUS**; and full details are given in the University Calendar, published by Mr. JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 5d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary, 1s.; Arts Bursaries, 6d.; Medical Preliminary, 6d.; Degree papers: Arts, 1s.; Science, 1s.; Divinity, Law, Medicine, and Music, 6d. each.

1920.

By order of the Senatus.

L. J. GRANT, *Secretary*.

OCCASIONAL NOTES.

SCALES of salary for teachers are at present in a shifting and uncertain position, and a comprehensive statement made to-day is sure to be out of date at some points next week. Nevertheless, it is important to have such statements as that just issued by the Board of Education as Circular 1144. The Circular comprises information on scales of salary as on October 1, 1919, for teachers in public elementary schools in England and Wales. Names of authorities are not given, but the number of authorities paying various minimum salaries, and the number paying various maximum salaries after specified years of service, are set forth in the tables. Information is also given as to the practice in regard to the payment of additional allowances, and as to the advantage given to college-trained teachers. The Circular forms a useful commentary upon the provisional minimum scale recommended by the Burnham Committee and agreed to by the National Union of Teachers. The outside public, and possibly some teachers other than elementary, may make the mistake of thinking of this scale as a standard scale. Of course, it is not so. It is a scale to which a large number of authorities have yet to work up. But many authorities already have scales equal or superior to this provisional minimum scale, and there can be no question of their bringing those scales down. The National Union of Teachers will see to that.

THE resolutions passed unanimously at the annual meeting of the Association of Head Masters make a claim for just treatment of schools where boys and girls are educated together, which cannot lightly be set aside. Co-education schools have been misinterpreted by

prejudiced persons, but that they are pioneer schools of social progress is obvious by the record of the work they have done in the country during the war and by their increasing hold on public esteem. It is now asked that they should be treated as an important part of the national scheme of education, and be inspected by persons with knowledge of and sympathy with their special aims and methods. The matter deserves the attention of the Board of Education, which, the resolutions infer, have not been too friendly to these schools. The Board, perhaps, have regarded them as cheap substitutes for separate boys' and girls' schools. At present there are more than two hundred mixed secondary day schools—that is to say, 21 per cent. of the whole number of secondary schools are co-educational. The main justification of the mixed secondary school is on the social side; it is urged that the comradeship of boys and girls at school is a sound preparation for the future association of men and women working together side by side. The family scheme of education develops between boys and girls a sympathy based on a just and reciprocal appreciation of their own respective qualities, and its supporters believe in it as a moral prophylactic.

DESPITE wide experience of co-education in the Colonies and America, there is still in this country a body of educational opinion which regards mixed schools as doubtful experiments. Some head mistresses are apparently afraid lest girls shall suffer from over-pressure, loss of gentleness, and the absence of the guidance of a wise and sympathetic woman. These may be *a priori* grounds against the system, but it would be more judicious to demand investigation rather than to bring charges. A *Times* critic declares the system, while dangerous for adolescents, to be valuable for children under twelve, and to be for adults the only system providing equal intellectual opportunities for men and women. Is this view in any way connected with the fact that it would leave the girls' day schools in sole possession of the education of girls from twelve to eighteen? Much of the opposition to co-educational day schools appears to be prompted by a want of faith in those engaged in the work; the fear is that they may not be conscientious in the supervision of their pupils, or wise in grading them according to their physical needs and mental abilities. But there are wise and sympathetic women at work in co-educational schools, and their opportunities for influencing the girls in their charge are not fewer than those of their colleagues in girls' schools; nor is the danger of over-pressure a monopoly of co-education. The question of games should offer no difficulty. The boys and girls need not be "made to play" hockey and lacrosse together, and the regular games and physical exercises may be taken separately. The future progress of co-education will be followed with the liveliest interest by all who value initiative and research in educational work.

THE Carlisle Education Committee have recently appointed to the head mastership of their new Central School a gentleman who is a university graduate and has had experience as head master of a secondary school. But he is not a certificated teacher, and for that reason the Board of Education decline to sanction the appointment. On purely educational grounds, the

An Unsatisfactory Position.

Board's ruling seems to us unfortunate, because it deprives the school of the services of the person adjudged to be the best qualified candidate for the post, and because it runs counter to the widespread desire to unify the profession as much as possible. At the same time, we cannot absolve the Carlisle Committee from blame. Central schools come under the elementary school regulations, which plainly state that, subject to the Board's power to modify the requirement where the candidate is of special fitness, the head teacher must be certificated. If the Committee did not know this, their ignorance is inexcusable; if they did know it, either they should have secured the Board's approval before confirming the appointment, or, if they deliberately omitted this precaution, they should show a stronger disposition to stick to their guns than appears to be the case. The truth is, we suppose, that, if the Board approved the appointment, they would have the National Union of Teachers to reckon with, and they do not want to reckon with that body. The whole position is unsatisfactory. As things are at present, if the Head Master of Rugby were to apply for the head mastership of a village elementary school, he could not be appointed—at least, without special sanction. But there is nothing to prevent a certificated teacher from becoming the head master of a secondary school, and we are glad to know that many certificated teachers do occupy such positions. But is it fair that the certificated teacher should continue to have it both ways? It is excellent to have a giant's strength, but—the National Union of Teachers should remember the rest of the quotation.

THE organization of physical education for all classes of the youth of the community is attracting due and increasing attention by the authorities. The Liverpool Education Committee, for instance,

Public Parks for School Games.

are now arranging with the Parks Committee of the Corporation for the use of playing spaces during school periods. This method has received a limited acceptance in some areas, and the results have been satisfactory where the parks are sufficiently near the schools to avoid loss of time in transit. Attention to facilities for games has reached its highest point in the United States, where two systems in particular have been tried. One, in which ample spaces are provided in the parks and a separate organization is responsible, a staff of trained supervisors out of school hours. This plan provides facilities for the youths and girls in business as well as for those still at school, and in some cases club rooms have been built to allow of indoor games and occupations.

THE other, or Gary, system secures that there shall be special playgrounds attached to each school. This method had obvious time-saving advantages, but the cost in congested areas such as New York was prohibitive to such an extent that its abandonment formed part of the

The Gary System.

party programme at one set of municipal elections, when the party of economy won the day. Probably the same feature would arise in our large cities, so that attention may more safely be directed to the utilization of existing open spaces. A scheme for properly supervised games out of school hours should be combined with arrangements for organized games, so that the games of special skill in which star performers get most of the game may

be played out of school, and attention specially directed to the needs of the average, or unskilful, boy during official hours. For this purpose round games would prove more useful than cricket. Should the system develop, arrangements would be needed with the Highways Committees to secure reduced fares for children travelling to the parks, or, better still, no charge. When only one authority is ultimately concerned, it is merely a matter of book-keeping.

THE lot of the geographical teacher is in these days no happy one. All his textbooks and atlases are out of date. He can buy the separate parts of the new

Geography Teaching and Modern Maps.

atlases that are now appearing and exhibit the maps in his classroom, but this is not so effective as when each pupil has his own atlas; besides, it is expensive, as he will never have the atlas bound up, and the forty or more parts will cost him two or three pounds. This uncertainty of map makers and geographical publishers is caused chiefly by the state of Russia. Until the new States there are settled, it is of small use starting on revision; and, when map makers do revise, there is plenty of room for improvement. One of the most popular of text-books still talks of Cape Ushant, a headland quite unknown in France. The heights of mountains and hills even in England are rarely given accurately, according to the Ordnance Survey, while often as much space is given to an unimportant (to us) South American Republic as to one of our own colonies or to a European State. We know that all these points will appear very slight to a teacher who teaches geography as a science, for that side of the subject has been untouched by the war; but for the teacher of junior forms the position is awkward, although by that very fact pupils have become more interested in finding out the places they have read about so often during the war.

THE small British army of Mons and the Marne, perhaps the best trained and most efficient fighting force the world has known, was officered almost wholly by men from the public schools who had been trained at Sandhurst and in their regiments, together with a small percentage of men from the universities. The company officers in particular, the latest products of Sandhurst, were excellent.

Should Army Officers come from Sandhurst or from the universities?

Sandhurst had been overhauled and rendered much more efficient in discipline and instruction not very long before the war, and there was little doubt that this military college provided the average cadet officer with a thoroughly sound initial training in his profession. During the war, officers were obtained in large numbers from many sources, especially from the ranks, and yet a good standard of efficiency was maintained. Now that the Army is shrinking to something like its pre-war size, how is the supply of officers to be regulated? Probably, and rightly, a considerable number will continue to come from the ranks, while the public schools will also continue to supply most of the remainder. Should these latter, for the most part, go through Sandhurst, or enter the Army through the universities? The answer seems to depend upon the type of candidate. To send the average Army boy into his profession through a university would, in most cases, be a waste of time and money. His mind and character are not of the kind that will benefit by university life and lectures. On the other hand, Sand-

hurst discipline and training are well fitted to develop him mentally and physically upon the lines most suited to him. But there are certain exceptionally capable Army boys who would undoubtedly gain much from contact with university life and thought. These boys, later, would add greatly to the thinking power of the Army.

Labour and Education.
A letter by Mr. J. Ramsay Macdonald, addressed to a workman student and published in the January issue of *The Highway*, might well be studied by all engaged in education. Our contemporary's object, by the way, is to supply a platform on which those engaged in manual labour may meet those engaged in the profession of teaching to discuss the problems of education, and more particularly those problems which concern the workers. Mr. Macdonald makes it very clear to his correspondent that he has no use for narrow vocationalism in any branch of education. "We must win our battles," he writes, "not by pitting ourselves against the capitalist, his meanness and his exploitation, but by ranging ourselves with the great forces of life and excellence, which must in the end dominate the world." "Whilst you have opportunity, and before the cankering cares of the world come upon you, roam a little in the wider fields of culture, picking flowers that you may think are of no use but for their scent and beauty." "Know something of your literature, and go to the best of it." The same insistence on the need for sweetness and light in all human intercourse pervades the letter; and, if Mr. Macdonald's attitude towards education may be taken as typical of that of the Labour Party generally, teachers at least have no reason to fear the growing strength of Labour in this country.

The Future of Education.
THE address delivered by Mr. James Graham, as President of the Association of Directors and Secretaries of Education, is a thoughtful, discriminating, and encouraging forecast of the future of education. We have to forget in large measure the past, and adapt our lives to new conditions. The issue of contending, if not conflicting, social, civic, and political ideals rests with the next generation, and education will be the main factor in determining its destination. Mr. Graham uses the word "education" in its broadest sense—a preparation for livelihood, for leisure, and for citizenship. He discusses at length the probabilities of improving physical development, and the measures that must be adopted to produce an army of intelligent, well prepared youths and young women, capable of developing into skilled units of industry and imbued with the right spirit of citizenship. His remarks on education and employment are of special interest. He points to the large proportion of unskilled workers and the number of unemployed, some of whom, under present conditions, are unemployable. This is one of the serious results of the war.

The need of Skilled Workers.
MR. GRAHAM says that the need for houses cannot be met owing to the shortage of skilled labour. During the five years of the war, apprenticeship was non-existent, with the result that the industry has not enlisted recruits. He urges that the shortage of at least 250,000 skilled workers can be met

only by intensive courses of training, organized by local authorities for selected workers. The main objection to this method of increasing the supply will, of course, come from the Trade Unions. The capital value of an unskilled worker, Mr. Graham says, is approximately £600, that of a skilled worker anything between £1,000 and £2,000. He claims that 2,000 ex-service men in Yorkshire who are being trained for skilled work in various industries will represent a permanent economic gain of at least £1,000,000. It is necessary, especially just now, to afford equality of opportunity, not only to young persons but to adults; for the worker who is to-day unskilled owing to the war to be enabled expeditiously to obtain the training that will enable him to rise from his condition. We can only hope, therefore, that it will be recognized by the interests concerned that if, in education, we are now called upon to scrap traditional prejudices, there must be a similar process in regard to the restrictions and regulations of labour.

The Rural Continuation School.
THERE can be no doubt that one of the difficult problems to be solved by administrators of the Education Act is that of the continuation school in rural districts. On this subject, Mr. W. A. Brockington, the Director of Education for Leicestershire, read a useful and, in many respects, illuminating paper at the North of England Conference. On educational grounds, it is advisable for young persons to be under part-time discipline and instruction throughout each educational year rather than attend a school full-time for, say, three months. If, moreover, convenient rural centres can be developed for part-time pupils, it will benefit other branches of education. As Mr. Brockington rightly assumes, provision must be made for about fifteen young persons per annum to each thousand of the population. He suggests that the smallest unit of population which would justify the establishment of a Rural Continuation School Centre is 2,000. This would yield, during the first seven years of the Act, a part-time school attendance of sixty to seventy young persons.

Methods of Working.
MR. BROCKINGTON would arrange for the young persons to attend on one day in each week during forty weeks of the year, the terms being such as to provide for a long summer vacation. Systematic education would be given by a whole-time staff, assisted by visiting instructors. This arrangement would not meet the statutory requirements as regards time, and, to make up for the deficiency of one and a half or two and a half hours a week as the case may be, he proposes that supervisors of studies should be appointed for each village who would be responsible for keeping in touch with groups of students, directing their reading, and so on. This scheme takes a good deal for granted. It assumes, for instance, that the rural area has a population of 2,000 living within a reasonable distance of a convenient centre; it implies also that there will be few reluctant students among young persons. But in dealing with the rural problem, area is an important factor. There are many districts throughout this country where, within an area of twenty square miles, there are only ten young persons between the ages of fourteen and sixteen. For such districts, and they are numerous, there seems to be no alternative to the short course of continuous training.

A SECOND UNIVERSITY FOR LONDON.

THE Imperial College of Science and Technology at South Kensington, which includes the Royal School of Mines, the Royal College of Science, and the City and Guilds Engineering College, is agitating to be recognized as a regular university with power to grant its own degrees. At present it can only offer a diploma to its students after they have completed with credit their three years' course. If they desire a degree in addition, they have to present themselves at the University of London, where the requirements are not identical with those of the College, so that a student has a double labour, which militates against his professional work. Again, many students who enter the Imperial College have not matriculated and are of an age when they do not wish to spend six months or more in passing that tricky examination, the London Matriculation. It is true that the Imperial College has its own entrance examination, but it is not recognized as equivalent to a university matriculation; for, although the requirements in mathematics and science are searching enough, the language tests, especially in English, are insufficient.

When the new teaching university was founded in 1898, the Treasury had a splendid opportunity of endowing the capital with an institution which would rival those of Paris and Berlin. It failed to rise to the occasion, and, as the President of the Board of Education in those days was a mere placeman with no more knowledge of education than of local government or of any other office, he was not strong enough to force the hands of the Chancellor of the Exchequer. Hence the bond that has connected the widely separated and widely different constituent colleges has ever been a weak one. The professors and their assistants have been hampered in their work by financial worries; and it is the teacher and not the building that is the groundwork of a university; although suitable buildings, like those for instance at Birmingham, do make an organic whole of the higher teaching of a town and encourage a good teacher by making him feel he is not hampered. The consequence of the poor pay is that the London colleges cannot keep their best teachers, who leave for better paid posts.

The old Victoria University was formed of three colleges at Liverpool, Manchester, and Leeds. After a time of association, these colleges separated and formed separate universities. Now it takes as much time to get to the East London College from Ealing as from Liverpool to Manchester. London is so huge that there is little connexion between its different parts, and very little sharing of work is possible. It is true that King's College specializes in law and theology, while University College specializes in political economy and architecture, and they share certain modern languages—Italian at University, Spanish and Portuguese at King's. But, if a student had to take many rare subjects, he would spend a large part of his time running from the Strand to Gower Street or to Clare Market.

Another bone of contention is the question of the external student. The heads of colleges contend that no student should be admitted to graduation who has not studied at a definite centre of tuition. But the University of London has made its name by opening its doors to any student who could pass its examinations, and it would seem a pity if there were not one university in the Empire where the poor man could graduate merely on payment of his examination fees. We know that the preparation of these external students has degenerated into commercial channels in some cases, but the right is too precious a possession to be surrendered lightly. The standard of the external examinations is notoriously higher than that of the internal, and it would be easy to make it higher still to prevent commercialism.

But the crux of the situation is endowment. If the State will not do its duty, London should appeal to its merchant princes. What a Rockefeller can do for the United States, and what Lord Leverhulme has done for Bolton, it should not be impossible to get a millionaire, or a group of millionaires, to do for London; and, if Londoners believe sufficiently in education, they will get it done. Faith can still move mountains.

THE IRREDUCIBLE MINIMUM IN GRAMMAR.

By EDITH CADMORE.

NO school subject is more persistently vilified than grammar, yet I have had classes who either enjoyed it, or flattered me by pretending that they did, while I have honestly enjoyed teaching it. Admitted that it has no extrinsic attractions, arithmetic, another essential school study, shares with it this disadvantage; but there are methods of teaching, as well as methodical omissions, which may render these and similar subjects at least less repugnant to the young learner.

Why should one teach grammar at all? It is not essential to correct speech or correct writing, for both can be learnt by imitation, as far as the mother tongue is concerned. But there's the rub! My own most valuable experience in teaching this subject was with a set of illiterate young people who were being trained as missionaries, and who had therefore to learn foreign languages. It was discovered that their ignorance of grammar left them destitute of a set of terms without which the rudiments of another tongue could hardly be conveyed to them; for the terms of grammar correspond exactly to the counters, of no value in themselves, used in certain card games—without these valueless counters the games themselves cannot be played. Through teaching these young people, whose time was strictly limited, and therefore valuable, I learnt how much could safely be discarded, and to teach English grammar from the point of view of another language.

For years now I have taught it with a view to the acquisition of French, which is usually the first foreign language that an English pupil at a girls' secondary school learns and often remains the only one. But, whereas with my missionary pupils I had to think of a foreign language only, with ordinary pupils the mother tongue was made my first consideration; for grammar, if it is not essential, can be of the greatest use in the teaching of composition.

Before embarking upon any new stage of my grammar teaching to young pupils, I used always to ask myself: "Will this be useful to the pupil, either immediately, as a help to the understanding and use of her own tongue, or in the near future, in her study of French?" All that would not pass this utility test was rejected as either unnecessary, or to be postponed till, if ever, a more highly inflected language than English had to be mastered. Moreover, I never scrupled to tell a pupil that there were many things they could not argue about and must take for granted, which would only become clear to them when they had learnt another language. A child, for instance, who has learnt to reason a little, resents being taught to call the word "run" sometimes as infinitive, sometimes a past participle, sometimes a finite verb in the first person singular, sometimes in the first, second, or third person plural. The difference in the French forms helps finally to make clear to the child the different usages.

By experiment it was proved easier to begin with words rather than with sentences, which seems contrary to the usual experience of teachers. The recognition of the concrete noun, the so-called personal pronoun, the verb, adjective, adverbs of time, place, and manner comes easiest.

Before teaching the joining words, preposition and conjunction, I begin skeleton analysis, merely dividing the sentence at first into two parts, the thing talked of and the statement concerning it. Children positively enjoy tabulating, and they can early begin arranging exercises in analysis in two columns, subject and statement, to be followed gradually by subdivisions, each additional column adding to the pupil's sense of achievement. In spite of the wish to simplify as much as possible, I see no way of avoiding some such final tabulation as follows: (1) Subject and enlargement, with principal noun or pronoun underlined, and (2) statement, with subdivisions for verb, complement (completing noun, pronoun,

or adjective), object and adverb adjunct; but this final table will not be needed at once.

As soon as skeleton analysis has been mastered, and the preposition and conjunction introduced, it is desirable that much time and practice should be devoted to the phrases which so largely replace adjectives and adverbs. Familiarity with the phrase means a great advance in composition, and at the same time the child, though unconsciously, overcomes its main difficulty with ease; for it learns, from constant example, the association of the preposition with the accusative form of the pronoun. I am convinced that a teacher is well repaid both in grammar and composition for weeks of varied practice in phrase-recognition and formation.

There is no need to linger over number in nouns, gender and person in pronouns, or comparison in adjectives. Beyond the use of these terms one has little to teach the English-speaking child if one determines to ignore unusual examples and far-fetched exceptions. With case it is different. Owing to the absence of case-inflections in nouns, pupils find a real difficulty with this part of the accidence, and in teaching it one should make as much use as possible of the pronouns, with their varied forms. A clear understanding of case-relationship is, however, so necessary for other languages, as well as for English syntax, that again much time must be spent upon this branch of the subject. The argumentative child invariably picks a quarrel with the word "case," as with many other grammatical terms, among them "nominative" and "accusative"; but I fear that these senseless and antiquated titles must be insisted upon for the sake of uniformity. The western world will never agree to rechristen its grammar in order to simplify work for the child. It must not be forgotten that the average English child has a meagre vocabulary; and the learning of new words, for the solution of which no good reason can be given, presents a greater difficulty than it would to children whose acquaintance with words in general was wider.

The study of the verb demands the largest portion of the time given to accidence. With a view to the more complete French conjugation, I teach pupils at the outset to test their verbs when picking them out of sentences by repeating the formula, "I eat [or whatever the verb may be], thou eatest," and so on through the present and past tenses. They also write out many examples of the following table, using the different strong verbs:

	Present.	Past.	Future.	Secondary Future.
Simple	... I give	... I gave	... I shall give	I should give.
Continuous	I am giving	I was giving	I shall be giving	I should be giving
Complete	... I have given	I had given	I shall have given	I should have given

The recognition of the infinitive and past participle presents far more difficulty to the child than many teachers are aware of, while both must be unerringly distinguished if French and analysis are not to suffer in the future. It seems absurd that a class should need frequent reminding that a past participle is a past, and makes sense after "I have," while an infinitive is a present, and when it has no "to" to indicate it, can be recognized by always following another verb—not a noun or pronoun. The separate parts of "I should have been mistaken" must be understood, as well as the name of the tense known, otherwise the child tries to form new sentences with every verb form it meets. The subjunctive I leave to my French colleagues to teach, as it has practically disappeared from our own language except in "to be." Nor do I spend much time on the passive, as, in composition, it is a form that young pupils do better to avoid.

The uses and relations of the so-called relative pronoun must, on the other hand, be thoroughly familiar, as a help to French concords and to the analysis of complex sentences. Here a formal parsing arrangement, first explained and afterwards rigidly adhered to, is a help to the pupil. Thus, in: "This is the girl *whom* I met."

Whom: pronoun, relative; third sing. fem., agreeing with its antecedent, girl.

Acc. case, obj. of verb, met.

This order fixes on the child's mind the fact that there need be no agreement with the antecedent in case. The word, "antecedent," or some similar term, is unavoidable, as the word for which it stands must so often be discussed in French—the substitute relative pronoun (*lequel*, &c.) or a preceding object necessitating references to person, number, and gender.

In accidence, then, most stress needs to be laid upon the verb and relative pronoun, because these most help the future student of French, and it is easier to learn the uses of the necessary grammatical terms in one's own than in a new language.

Analysis is, however, the real aid to the understanding and writing of English. When the simple sentence has ceased to present difficulties, the complex sentence is best begun with the adjective clause, because it is the easiest to recognize. Only after much practice with adjective clauses, then with the easier adverb clauses of time, place, and manner, and finally with the noun clause, should a pupil be expected to face the non-selected complex sentence containing examples of any kind. In grammar it is especially desirable that one should learn to walk securely before trying to dance.

As it cannot be claimed for grammar that it has in itself any fascination, and as we cannot expect a child to foresee its utility in future language work, we must, in order to teach it without tears, follow the same method as in arithmetic. The pupil must have so much practice in easy examples that it can be expected to do perfectly, that it at length acquires a sense of power, and a pride in neat and accurate work within its compass, though the purport of much that it is doing, and the reason for the methods of arrangement, will be clear to it only later. It must learn to handle a needle skillfully before being called upon to make a garment. More than in most subjects, one must, in grammar, lead the child up the steep hill of knowledge. In my inexperienced days I used to give too little practice in easy, but important, exercises; such, for instance, as the copying out of sentences and then underlining the nouns and pronouns in the accusative, and the prepositions governing them in chalk of two colours. Children require much repetition in the harder part of their work, and do not find such exercises wearisome if each exercise presents some new little difficulty. There must always, however, be some matter for thought contrived and introduced into the simplest exercise, for there is no more unforgivable sin in a teacher than wasting the time of a child in purposeless repetition.

As grammar, properly regarded, is a handmaid to composition and literature, every example chosen should be taken from good authors. Outsiders often object to this as a degradation of literature, and express the opinion that children will loathe, because of over-familiarity, the passages they have worked at in grammar. To this I can only answer that, having been privileged to teach grammar and literature to the same pupils, I have not only witnessed their spontaneous joy when they met in other lessons detached sentences which they had parsed or analysed; but, from direct questioning when they reached the upper forms of the school, I have proved that in nearly every case they were proud and glad of their complete understanding of such passages and delighted to find them in their proper context. The same thing is often asserted of Shakespeare plays, but if a pupil does not wish to see or read again a play that he has studied at school, I am obliged, perhaps uncharitably, to conclude that his literature teacher was at fault. A more valid objection often made, by young teachers especially, is that literary passages used as examples in many textbooks need more explanation to illiterate children than the grammar itself. To this I would say that one must pick and choose among one's examples to suit the intelligence of one's class—for no one textbook is ever entirely suitable—and, that, if one falls sometimes into the temptation of spending undue time on the sense or the beauty of a passage rather than on the grammar which it was to exemplify, it is time well wasted. Here the French proverb truly applies—"Le temps le mieux employé est celui que

je perds." The child who becomes acquainted with even a small amount of literature in the course of his grammatical work has conquered a double realm. This, however, is a digression.

What do I claim to have omitted in my course? As far as possible everything which implies that English is still an inflected language—all that could properly be called historical grammar, which, if it be taught at all, should come when the pupil knows enough of at least one foreign tongue to be able to make comparisons and draw conclusions for himself. The words and grammatical forms taken from the Norman French are of interest to even an immature student of modern French; but it is a stupid waste of time to teach English grammar as if every child were going to learn a highly inflected language like Latin, and I avoid everything which does not apply to ordinary, present-day English. I aim at teaching broad rules and avoiding exceptions.

I have passed over derivation, because, though it is often looked upon as a branch of grammar, it is perhaps more closely connected with composition; but in one or other lesson it should certainly be systematically taught—some-what later than the stage treated of in the course sketched—because of its intrinsic interest, and because it leads a pupil more than anything else to study words for their own sake.

How long would the course outlined last? It can be completed in three years, between the ages of eleven to fourteen, if in the first two years two lessons weekly are given. To begin grammar much before the age of eleven is a waste of time. I began it—learning it by heart—at the age of eight, and I can still remember how in my parsing, done by the light of nature, I called every short word a preposition, and was usually right, though I burnt my fingers badly the first time on "is" and "was." I was probably thirteen before I found out the meaning of the first oft repeated sentence of my first grammar book: "Grammar consists of four parts: Orthography, Etymology, Syntax, and Prosody." My present plea is that, in these more enlightened days, children may be spared some of the fantastic devices for killing time invented by former instructors of youth.

PERSONAL PARAGRAPHS.

SIR ROBERT BLAIR will be the President of the Educational Science Section of the British Association for the meeting to be held at Cardiff in September next.

Two names occurring in the New Year Honours list are of special interest in educational circles: Baron Killanin, whose appointment as Privy Councillor is in recognition of his recent service as chairman of the Committee on Irish Primary Education; and Mr. H. J. Simmonds, Assistant Secretary to the Board of Education, henceforward to be C.B., as well as C.B.E. Teachers are specially indebted to Mr. Simmonds for his administrative work in connexion with the Pensions Department of the Board.

MISS M. S. LILLEY has been appointed by the West Riding Education Committee, Principal of the Bingley Training College, in succession to Miss H. M. Wodehouse, who has resigned on her appointment as Professor of Education in the University of Bristol. Miss Lilley, who is an old pupil of Arbroath High School, was a scholar of Somerville College and is an honorary Fellow of University College, London; she graduated with First Class Honours in Classics at London University, took a Second Class in the Honours School of Literae Humaniores at Oxford, and is an M.A. of Columbia University, New York. She has been head of the Training Department for Women at Birmingham University since 1913, having previously held the post of Senior Classical Mistress at the Manchester High School.

It is not usual for a former student of a college to become its principal; this distinction, however, has been achieved by Miss F. M. G. Micklethwait, of the Horticultural College, Swanley. Miss Micklethwait holds the Diploma of the College and was a Beit Research Fellow.

MRS. GWYNETH M. THOMSON, who has been admitted a student at Lincoln's Inn, and so taken the first and most important step that leads to the Bar, is a daughter of Dr. Bebb, principal of St. David's College, Lampeter. She was the plaintiff in the action of *Bebb v. The Law Society*, which came before the Chancery Court, and later the Court of Appeal, in 1913, in which she sought unsuccessfully to obtain a declaration that she was a "person" within the meaning of the Solicitors Act of 1843, and was therefore entitled to be admitted as a Solicitor, provided she passed the necessary examinations.

MR. THOMAS RAYMONT, who was recently appointed to the Wardenship of Goldsmiths' College—a position which has been vacant since the death of Mr. Loring on active service in 1915—has been on the staff of the College for fourteen years, during the last five and a half as Acting Warden. He is an old student of Borough Road Training College, and graduated M.A. (London) in 1894. After some experience as an assistant master at the Central Foundation School, he became Lecturer in Education, and later Professor, at University College, Cardiff.

MR. A. L. F. SMITH, Fellow and Tutor in Modern History, Magdalen College, Oxford, and son of the Master of Balliol, has accepted an appointment as Deputy-Director of Education in Mesopotamia. Mr. Smith served in India and Mesopotamia until last summer, and was political officer of the Mesopotamia Forces. He is to take up his duties immediately.

HARROW SCHOOL has lost this term two of her best known masters, Mr. C. H. P. Mayo and Mr. R. Somervell. Mr. Mayo, who was a scholar and prizeman of Peterhouse, Cambridge, and Twenty-sixth Wrangler, Mathematical Tripos, 1882, went to Harrow in 1893, and was promoted to Mr. Bosworth Smith's House, The Knoll, in 1909. Mr. Somervell was a scholar of King's College, Cambridge, and graduated first in First Class Historical Tripos, 1882. He has been Bursar at Harrow since 1888. The new Bursar, Mr. C. P. Goodden, is an old Harrovian, and was in the Cricket Eleven in 1899.

THE newly elected Chairman of the Association of Assistant Masters, Mr. A. Forster, of the Grammar School, Normanton, has been an active worker in educational circles for many years. Previously to taking up military service, he held office as honorary treasurer of the Association, and on his return to school duties he became vice-chairman, and honorary treasurer of the Benevolent and Orphan Scholarship Fund.

MR. W. R. DYKES, assistant master at Charterhouse School since 1903, has been appointed to succeed the Rev. W. Wilks, who is retiring from the secretaryship of the Royal Horticultural Society after a tenure of thirty-one years. Mr. Dykes was a scholar of the City of London School and an exhibitor of Wadham College, Oxford. He obtained Second Class Classical Mods. 1898 and Second Class Lit. Hum. 1900. He is a Licentiate of Letters of the University of Paris, and the author of "A Monograph on the Genus *Iris*."

DR. C. H. B. DESCH, professor of metallurgy in the Royal Technical College, Glasgow, who is succeeding Dr. J. O. Arnold, F.R.S., in the chair of metallurgy at Sheffield University, is a native of Tottenham and received his scientific training in the Finsbury Technical College, the University of Wurzburg, and University College, London. He is D.Sc. (London) and Ph.D. (Wurzburg).

SIR JOHN SANDYS, who resigned office as public orator of Cambridge University in December last, went into residence from Repton School to St. John's in 1863. He graduated as Senior Classic in 1867, and was elected Orator in 1876 in succession to Jebb, who was appointed in that year Professor of Greek at Glasgow. He has held office for a longer period than any of his predecessors—forty-three years—and during this time he has made nearly seven hundred Latin speeches in honour of distinguished persons, and some eighty letters on behalf of the Vice-Chancellor and the Senate. He was knighted in 1911 and is retiring merely to find more time for his literary work.

* * *

CAPTAIN M. J. TRUSCOTT, late R.G.A., Sutton Coldfield, has been appointed Head Master of the Malmesbury Secondary School, Wilts. He graduated B.Sc. (Econ.) and M.A. (Hist.) at London, and has been an assistant master at Warminster, Maidenhead, and King Edward VI Grammar School, Aston, Birmingham. After the Armistice he was appointed to the staff of the 8th Army Corps as Commandant of the Corps Educational Centre.

* * *

THE REV. DR. EDMOND WARRE, head master of Eton College for twenty-one years and provost for nine years, died at Eton on January 22, aged eighty-two. We hope to refer to his work for education in our next issue.

* * *

THE death is reported of Dr. George Smith, C.I.E., a distinguished Anglo-Indian educationist and journalist. Dr. Smith was educated at the Royal High School and Edinburgh University, and became principal of Doveton College, Calcutta, at the age of twenty-one.

* * *

MR. J. R. CLARK, C.B., R.N., whose death was recently reported, was for many years Chief Naval Instructor at the Royal Naval College, Greenwich. He was an enthusiastic and capable teacher, and was held in deep esteem by all his pupils. On the occasion of King Edward's Coronation his services were recognized by the bestowal of the Companionship of the Bath. He had previously been awarded the Egyptian Medal and Khedive Star for service on board H.M.S. "Inconstant" during the Egyptian war of 1882. During this campaign King George, then Prince of Wales, who was serving as a midshipman on the corvette "Bacchante," was for a time under Mr. Clark's tuition.

ONLOOKER.

TOPICS AND EVENTS.

MR. FISHER'S ADVICE TO TEACHERS.—In his inaugural address to the Conference of Educational Associations at University College on December 31, the President of the Board of Education, speaking particularly to teachers in elementary schools, gave some excellent advice which teachers in every grade of school may well take to heart and try to follow. It would be difficult to frame a more helpful and inspiring New Year's message. "Be kind," he said, "be patient, be vigilant, be just. Think meanly of your own importance, but greatly of the importance of your office. Let not a day pass without learning something, either from your children or from your books or from the world around you. Make friends outside your calling and station. Nourish your imagination by reading every day some fragment of the great human books, of the poets, the historians, the biographers who warm the heart and nerve the will. In politics be on the side of the optimists, believing that the world can be improved by good institutions and that you are one of the good institutions of the world. Do not allow yourself to drift into the position of those who take a bitter, scornful, or desperate view of human nature or of the Society in which they live. Remember that a creature full of gall and bitterness has no business to meddle with the golden innocence and pleasant malice of the young. Never underrate the cleverness of children, and bear in mind that a Cabinet Minister, a Bishop, or a Judge are seldom as agile or eager in intellect as a brilliant undergraduate at the University. Cultivate a pure and distinct pronunciation of the English language. Find means to inculcate, effect-

ually but not too obtrusively, the broad civic virtues, patriotism, temperance, economy, the kindly treatment of animals. Keep your health, vary your holidays, let it be an amusement of spare hours to invent new ingenious ways of interesting your class. Do not think about salaries, or if the dark thought assail you, combat it with this incident from the childhood of the great Macaulay, who, on being informed by his mother that he must learn to prosecute his studies without the consolation of bread and butter, replied with characteristic confidence and good cheer—'Yes, Mamma, industry shall be my bread and attention my butter.' Once again, Ladies and Gentlemen, 'Out of the mouths of babes and sucklings.'

ROYAL COLONIAL INSTITUTE, PRIZE COMPETITION.—The Council of the Royal Colonial Institute, with the view of encouraging the progress of Imperial Studies in the schools of the Empire, have decided to award next summer medals and prizes of books for the best essays sent in by boys or girls who are pupils at schools either in the United Kingdom or in the outer Empire. The essays will be adjudicated upon in two classes: Class A, essays submitted by candidates of sixteen years of age or more on July 31, 1920; Class B, essays submitted by candidates above the age of thirteen and under sixteen on July 31, 1920. The competitions will be governed by the following among other regulations: The competitions are open to pupils of any school in the British Empire, and to the children of British subjects who are pupils at schools outside the British Empire; the essays should be written on one side only of foolscap paper, with an inch and a half margin on the left-hand side; typed copies are admissible; the length of the essays must not exceed 4,000 words in Class A or 3,000 words in Class B. Essays for the competition in 1920 must in any case reach the Institute not later than July 31, 1920. The prizes and medals to be awarded are:—Class A: For candidates of sixteen and more on July 31, 1920: First Prize, the Silver Medal of the Royal Colonial Institute, together with suitably inscribed books to the value of three guineas; Second Prize, if there be a sufficient number of candidates, suitably inscribed books to the value of two guineas. Class B: For candidates above thirteen and under sixteen on July 31, 1920: First Prize, the Bronze Medal of the Royal Colonial Institute with suitably inscribed books to the value of two guineas; Second Prize, if there be a sufficient number of candidates, suitably inscribed books to the value of one and a half guineas. The subjects prescribed for the competition in 1920 are: Class A, "Trace the Causes of the War of American Independence"; Class B, "The Life and Work of Cecil Rhodes as an Empire Builder." Full particulars may be obtained from the Secretary, Royal Colonial Institute, Northumberland Avenue, London, W.C.2.

PRIZES FOR PROFICIENCY IN SCANDINAVIAN LANGUAGES.—The London Chamber of Commerce has accepted the offer of the Scandinavian Insurance Company of £1,000 to the Commercial Education Department, to be applied to ten years' prizes for proficiency in Danish, Norwegian, and Swedish. Mr. C. L. Hansen, of the Danish Bacon Company, also offers annually for the next ten years a scholarship (to be known as the "King Canute Scholarship"), providing fare to and from Denmark, with three months' board and residence and tuition in one of the Danish high schools; the Russian and English Bank, through its manager, Mr. A. Kiaer, presents a gold, silver, and bronze medal for like recipients, these to be called "The Kiaer Medals for Danish"; and Messrs. Plum & Skikild, on behalf of the Butter Exportation Committee, offer Danish books to the value of ten guineas annually for requisite distinction in the Chamber of Commerce Senior Examinations for Danish.

LOANS FROM VICTORIA AND ALBERT MUSEUM.—The Board of Education regard the effective teaching and the intelligent appreciation of art as a matter of national importance, and they desire to promote both these ends in training colleges and secondary schools. For this purpose they have arranged that loans of objects from the collections of the Victoria and Albert Museum shall be made available in training colleges and secondary schools recognized by the Board, under suitable conditions, so far as the supply will permit. It is contemplated that objects so lent should be used both in direct connexion with the teaching of art and handicraft, and as illustrations to lectures, classes, &c., which do not form part of the regular course of training or instruction. The material at the disposal of the Museum for this purpose includes: original etchings and drawings; original examples of design in textiles, lace, embroideries, &c.; reproductions, and large photographs, of objects of industrial art; and sets of lantern slides, under the heads of—(a) architecture, ancient and modern; (b) paintings and drawings; (c) sculpture, furniture, and other branches of artistic craftsmanship. No de-

tailed list of this material is at present available except as regards the lantern slides, but it can be seen on application in the Circulation Department of the Museum. There is a typed catalogue of the lantern slides, and photographic prints of any particular set of slides can be lent for inspection. Further information may be sought, and forms of application for loans obtained, from the Museum by personal call or by letter. The official form of application sets forth the conditions under which loans are issued. Any application or inquiry should be addressed to the Secretary of the Circulation Collections, Victoria and Albert Museum, South Kensington, London, S.W.7.

THE LING ASSOCIATION.—The annual Holiday Course meetings were held at St. Paul's Girls' School, Hammersmith, from January 5 to 9. Between three and four hundred gymnastic teachers attended. The daily gymnastic classes were taken by Miss H. Andersen and Miss P. Starling, and the dancing classes by Miss H. Kennedy and Mrs. Bridgman. There was a conference of teachers who are acting as organizers of physical training to education authorities, when a paper was read by Miss H. Graham; a demonstration of new strokes and styles of swimming at the Hammersmith baths, under the auspices of the Amateur Swimming Association; and an afternoon's "gymnasium games" under the direction of Miss C. A. Partridge. The lecture list was as follows: "The Nervous System in Relation to Movement," by Miss M. Stansfelt; "How to Organize School Clinics" (with demonstration), by Miss Olive Adams; "Deformities and Disabilities of the Feet," by Mr. W. H. Trethowan; "Mouth Breathing," by Mr. Somerville Hastings; "Some Reflections on Unqualified Manipulative Surgery," by Dr. James Mennell; "The Sex Disabilities of Women Workers," by Dr. Letitia Fairfield. A net ball tournament between teachers from the Anstey, Battersea, Bedford, Chelsea, and Dartford Physical Training Colleges was arranged, the final game being played between Bedford and Chelsea, in which Chelsea was victorious. At the general meeting, Miss M. Stansfelt was re-elected president; Miss H. Graham, vice-president; Miss M. Withall, treasurer; and Miss Hankinson, 67 Shaftesbury Road, Crouch Hill, N. 8, secretary.

THE TEACHERS' CHRISTIAN UNION has succeeded in restoring to the list of University Extension Lectures in London the subject of the teaching of the Bible. This was arranged before the war by a voluntary association of teachers, who knew by experience how much they and their colleagues needed scholarly help with the difficult problems involved. For some years past it has been impossible to continue the lectures, and the association for that purpose had lapsed, but the Teachers' Christian Union has now undertaken the work for the future.

DUTY AND DISCIPLINE MOVEMENT.—An experiment is about to be tried by the Duty and Discipline Movement. The growth of indiscipline in family life is, the Association asserts, a well known feature of the age. It was increasing before the war, and the war itself has turned a possible danger into a serious menace which threatens the stability of the country. There are many homes which have been deprived of the father's help. The officers of the Duty and Discipline Movement believe that mothers would be glad to turn for advice to some friend who could give personal aid and counsel, but all too often the friends are found to be in the same predicament. The officers of the Duty and Discipline Movement claim to have had wide experience. They have in the course of their work learned much of the many pitfalls that beset an anxious parent; they are therefore inviting parents to bring their troubles to them; they will listen to their special difficulties; they may ask questions designed to discover the peculiar circumstances of each case; they will advise and may keep in touch with the family concerned and offer what further help they think necessary. The Duty and Discipline Movement was founded by the Earl of Meath in 1911. Its President is the Duke of Sutherland, and its Chairman of Executive Lord Morris of St. John's. It has recently moved into new offices at 21 Denison House, Vauxhall Bridge Road, S.W.1, close to Victoria Station. All communications should be addressed to the Secretary, Mr. C. Montgomerie.

THE LEAGUE OF EMPIRE.—Mr. Edmund Gosse and Sir Henry Newbolt have joined the Literature and History Committee of the League of Empire, of which Sir Sidney Lee is chairman. This and other committees of the League are preparing work for the Imperial Education Conference of Teachers' Associations which will take place in Toronto in 1921. The Government of Ontario have allotted to the League an education secretary in Toronto to carry out arrangements for the Conference and also to help with

the interchange of teachers and other education work of the League. The London County Council have authorized the League to recommend twenty Canadian teachers to their services each year for one year's experience in the schools. London teachers wishing to take up work overseas are also granted a year's leave of absence. Four Ontario teachers have already taken up work in London under the scheme, and several London teachers are interchanging with teachers in Canada and Australia, where similar arrangements are in operation.

MESSRS. G. W. BACON & CO., LTD., the well known map and educational publishers, who have been in business in the Strand for upwards of half a century, have now removed to Norwich Street, Fetter Lane, E.C.4.

ROYAL SANITARY INSTITUTE.—The Rt. Hon. Viscount Astor has consented to accept the office of President of the thirty-first Congress of the Royal Sanitary Institute, to be held at Birmingham from July 19 to 24, 1920. The Lord Mayor of London has consented to act as chairman of the general committee promoting Health Week, to be held from May 2 to May 8.

THE SCHOOL TEACHERS (SUPERANNUATION) ACT, 1918.—The Board of Education have given notice that, subject to certain necessary modifications, the provisions of the Superannuation Act are to be extended to the Island of Jersey.

INDUSTRIAL WELFARE SOCIETY.—We have received a copy of the first annual report of the Industrial Welfare Society. The society exists to focus and develop the industrial, educational, and recreational activities indicated by the word "welfare." It was formed originally to deal with industrial boys, but recently its scope has been enlarged to embrace all industrial workers; it wishes to retain for industry itself the responsibility for and direction of industrial welfare work. The society desires to assist employers by discussing with them schemes of welfare work applicable to their own particular works; by training and recommending suitable persons for positions as welfare supervisors; and by supplying welfare supervisors with information regarding various phases of welfare work. The practical interest of 230 firms as subscribing members has been secured; more than 1,800 firms have been supplied with information regarding the progress of the movement; and representatives of the society have paid more than 900 visits to individual firms. Full particulars concerning its work may be obtained from the director, the Rev. Robert R. Hyde, Sanctuary House, 33 Tothill Street, Westminster, S.W.1, to whom donations to the funds of the society may be sent.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

We have said that it is incumbent on pedagogy to find nice methods of ascertaining the powers and aptitudes of a child, so that the education proper for him may be determined. Schoolmen in the United States have been addressing themselves to this task with singular ardour. We have before us a recent number of the *School Review* (xxvii. 10), which is edited by the Faculty of the School of Education in the University of Chicago. It contains an article on "The Measurement of Physics Information," another on "The Character and Value of Standardized Tests in History," also "A Brief Bibliography of Tests in High School Subjects." In an American experimental school you will find them clearing English essays of technical errors, then weighing the evidence of a skill to combine and infer, of imagination, and so forth. For estimating ability in mathematics, America has produced scales and measurements beyond numbering. Now, as to the value of such tests the Americans themselves, as we think, are not consentient; Englishmen are wont to ignore or deride them. The wise course would be to study them in experimental schools, to reject the unserviceable, to amend the imperfect, to seek new devices in supplement of them. Yet absolute scientific precision we must not expect. You cannot analyse an essay, for example, as the chemist analyses a mixture of salts; for in the one case the subjectivity of the examiner means much, in the other nothing.

FRANCE.

We noticed recently the definitive table of salaries for primary teachers in France. The *Bulletin administratif du Ministère de l'Instruction publique*, No. 2,402, now publishes the scales fixed for secondary teachers—grouped, they, too, like

Salaries of Secondary Teachers.

the primary teachers, in categories of six ordinary classes and a *classe exceptionnelle*. Let us be content to cite a few illustrative figures. Head masters and teachers in *lycées* admitted to the *agrégation* (*professeurs agrégés* and *professeurs agrégés*) receive the same salary, with the addition for a head master of a modest *indemnité de direction*. That salary is, in Paris, 11,100 francs in the sixth class, rising by 1,000 francs a class to 17,100 in the *classe exceptionnelle*. In the Departments the progress is from 8,800 francs by increases of 900 francs to 14,200 francs. If a head master has only the *licence*, he is paid at a lower rate. *Professeurs chargés de cours* have salaries ranging from 8,100 francs to 13,500 francs in Paris; from 6,800 to 11,600 for *licenciés*, or from 5,600 to 9,500 for *non-licenciés*, in the Departments. Women secondary teachers are paid smaller salaries than men; in Paris, for example, *directrices* and *professeurs agrégées* of girls' *lycées* advance only from 9,300 francs to 15,300 francs, instead of from 11,100 to 17,100. France attaches importance to drawing, and a *professeur de dessin* may attain a salary of 12,600 francs in Paris, or of 10,600 francs in the Departments. But the purchasing power of the franc must improve if the secondary teachers are to be satisfied with the scheduled remunerations.

If the Germans had held Cornwall and Devonshire for forty-seven years and we had got them out, we should have shown a certain grim pleasure.

About Alsace-Lorraine.

The French are capable of a higher joy, and their exultation over the recovery of the three lost Departments, Haut-Rhin, Bas-Rhin, and Moselle is unbounded. On November 22, 1919, the formal opening of the University of Strasbourg by the President of the Republic took place in the presence of Marshal Foch and Marshal Joffre. On December 8, M. Clemenceau hailed the return of the Deputies from Alsace and Lorraine to the French Chamber in a speech vibrant with emotion. Says M. Deschanel: "L'âme de l'Alsace n'a vraiment trouvé qu'en France le génie propre à la féconder," and France has entered Alsace again to resume the fertilization of its soul. But it is not enough that France should return to Alsace-Lorraine; Alsace-Lorraine must also return to France and be studied there with tender interest. *L'Ecole et la Vie* devotes an issue (iii, 14) to the teaching of Alsace and Lorraine in France, discoursing on the geography, the inhabitants, and the history of the region. It recalls, moreover, the great Frenchmen born in the land—the soldiers Kellermann and Kléber, the sculptor Bartholdi, the writers Erckmann-Chatrian, Edmond About, and Paul Verlaine, with many another of notable name. French, it is pleasant to learn, will be introduced gradually, as into Bretagne. "Let us not annoy the Alsatian," says a writer in *La Dépêche*, "by deriding or misunderstanding his dialect, which has been for nearly fifty years an instrument of resistance against Germanism."

GERMANY.

It was at Essen last autumn. The *Entschiedene Jugendbewegung* held a great meeting in the Saalbau. This

Two Decrees.

Jugendbewegung is a movement of the young who have decided that adults, having made a mess of things in general and of the German Empire in particular, are to be hated, and who claim for youth the right of self-determination in school, university, home, State, religion, and love (*Erotik*). One of the speakers in the Saalbau contended for the creation of a Boys' Council to control the instruction in schools and to choose the subjects taught; then other claims were made, so wild that the saner part of the audience belaboured the revolutionists with sticks. Such are the bubbles which rise to the surface in the seething caldron that is Germany. The Prussian Minister now feels that the young, whether *entschieden* or not, must be kept aloof from politics. Accordingly he has issued a decree (*Erlasse*), which lays down that the school must not promote partisan tendencies in its pupils; that teachers must not use their influence for political purposes; and that boys in school must not exhibit party spirit or wear party badges. Another decree, dated December 6, 1919, by the same Minister (Hänisch) states that the textbooks of history hitherto in use do not correspond to present requirements, and that there is to be a thorough revision of them after the approaching *Reichsschulkonferenz*, or Imperial School Conference; he therefore orders that in the meantime existing history class books are not to be used, nor scholars to be required to buy them. In fine, books that deify the Hohenzollern are nauseous to the new democracy.

Perhaps in most histories there is more of propaganda than the innocent suppose, and such works as Heinrich von Treitschke's belong to the category of the *Tendenzroman*.

EGYPT.

In 1917 a strong Commission, under the presidency of H. E. Ismail

Report of the Elementary Education Commission.

Hassanein Pasha, was appointed to examine the question of elementary education in Egypt, and the Report, fearlessly critical and soberly constructive, of this Commission has just been issued. We summarize the contents as briefly as possible. At present it is ignorance that hinders progress in Egypt. The best reforms in the fields of administration, public hygiene, or agriculture are doomed from the outset to be abortive so long as the majority of those to be benefited remain unable to understand them, and therefore to take advantage of them. The present conditions have been described (*Al Akhbar*, April 28, 1917), with only slight exaggeration, thus:—"The majority of the Egyptians are the peasants who wear blue *gallabiyas*, most of whom cannot read and write. If a peasant wishes to have a letter written, he is often obliged to go to another village to find someone to do it for him. As for the handwriting of such a scribe, it can be deciphered only by those versed in hieroglyphics. The Egyptians know nothing about hygiene, as is proved by the stench which fills one's nostrils miles before one reaches a village. This stench emanates from the old heaps of manure which surround the villages or *'ezbas*, and the drains of the mosques which pour their sewage into the canal from which the natives drink. The houses in these villages and *'ezbas* are very close to each other; the doors are small and their rooms have no windows; and the peasant sleeps in his house with his cattle as well as with his children. The peasants dread a doctor as they dread the angel of death. As soon as a doctor makes his appearance in a village, the patients are hurried away to the fields, or are concealed under heaps of cotton-sticks on the roof. Although water is not scarce, most of the peasants are dirty; in fact, they are afraid to take off their clothes for fear that the vermin will carry them away. Again, the Egyptian peasant is the only agriculturist in the world who still follows the systems of tillage practised by the ancient Egyptians. He has not improved his cattle or his crops; and he is still the victim of the merchant and the usurer, notwithstanding all the laws that the Government has passed for his protection."

According to the census returns for 1907, 96 per cent. of the Egyptian population (92 per cent. of the men, 99.7 per cent. of the women), were illiterate; and, so far as can be inferred from available figures, the diminution of illiteracy since then

Inadequacy of the existing Provision.

has been deplorably small. For the adequate provision of elementary education Egypt requires about 10,000 efficient elementary schools (*maktabs*). It has at present only 663 public *maktabs*, potentially efficient, and some 7,000 private *maktabs* or *kut-tabs*. Of the latter the great majority are conducted in sad circumstances—"the buildings are often mere hovels; the children are huddled together under the most insanitary conditions; over 95 per cent. of the children are suffering from ophthalmia; the teachers are ignorant and incompetent; sometimes they are themselves illiterate; the simplest requirements as regards equipment are generally lacking; the instruction is frequently limited to memorizing the *Qorân*; work is carried on amidst a deafening babel."

To build up gradually a new structure of elementary education, the Commissioners have approved a Draft Bill. It lays down that the Provincial Council in each

The Draft Bill.

Province, and the equivalent authority or authorities under each Governorship, shall provide each year approved accommodation in elementary schools for at least one-half per cent. (*i.e.* one out of every two hundred) of the whole population, each town and village being considered as a separate unit and entitled to its own proportion of school provision. The obligation is to cease in any town or village when 10 per cent. of the population has been provided for. Financial clauses indicate the means by which funds will be raised for the establishment and maintenance of the schools. As general principles, boys and girls will be instructed separately, and no fees will be charged. Attendance (contemplated from the age of six to the age of eleven) is not compulsory. The Provincial Council or the equivalent authority will select and appoint assistant teachers; but teachers of higher rank will be chosen by the Ministry of Education. It is proposed that the new law shall come into force on April 1, 1920.

Provision being made at the rate of one-half per cent. of the population until ten per cent. are provided for twenty years will be required for the full realization of the scheme. The Bill contains

General Observations.

nothing with regard to the training of teachers; it assumes that a supply of qualified teachers will be available as and when required. With respect to religion, every elementary school maintained or aided by a Provincial Council or equivalent authority will be open to Egyptian children irrespective of their religious faith. A parent or guardian may, by written request addressed to the Head of the school, withdraw his child from the religious instruction given in an elementary school, if the instruction is not in accordance with the religion professed by the parent. Otherwise religious knowledge is an obligatory subject. In the vast majority of cases, the schools maintained by the Provincial Councils and equivalent authorities will be Mohammedan, and the syllabus to be prepared by the Ministry of Education will include instruction in the Qorán and the principles of Islam; but it is left open to any Provincial Council or equivalent authority to establish elementary schools specially for Copts. The scheme as a whole, we remark, is so modest that it will surely have to be supplemented at an early time. Non-compulsory education ended at the age of eleven will neither suffice permanently for Egypt nor be approved by the British Empire.

CORRESPONDENCE.

THE PROFESSION AND PARTY POLITICS.

To the Editors of The Journal of Education and School World.

DEAR SIRs,—To an observer of educational movements one of the most disquieting features of the present time is the repeated effort on the part of certain sections of the profession to bring about a definite attachment to the Labour Party. The reasons for this movement are somewhat obscure. But, while anxious to avoid doing any injustice, one cannot help suspecting that they are professional rather than educational—that the real purpose is the securing of our aims for improved conditions, greater security, increased pay, and the like, rather than the attainment of a sounder system of national education.

Many of us view this movement with feelings of alarm, as inimical to the highest interests of education. It seems significant of an attitude that unfortunately exists somewhat widely in the profession and manifests itself in various ways; the attitude that appears to regard the instrument as greater than the cause, and the teacher's interests as more important than those of education. That the two are intimately bound together is a truism. But we are prone to make the one loom too large, and to think too little of the other. Our sense of proportion is at fault. The burden of our discontents rises like smoke to bemuse us and obscure our sight.

We had a hint of this when Mr. Fisher addressed the Conference of Educational Associations on January 1. "Do not think of salaries," he told us. That, of course, as he himself knew, was a counsel of impossibility; and as such it does not merit consideration. But then he did not mean what he said. The phrase did its work of catching the ear and arresting thought. What he really meant was probably something of this sort—"Do not conduct your conferences as though salaries were their sole, or even their main, object. Concentrate rather on the vast mental and spiritual factors of your work. Show in all that you do that you believe these to be the things that really matter, that you are capable of broad and lofty constructive thinking upon questions of educational ideals and their attainment, of educational control, organization, and administration, as well as able to look after the practical problems of your own immediate personal requirements and interests."

Taken with such a connotation the words are of prime importance. For it is in the highest degree essential that we convince the public, education authorities, and Parliament that we possess such an outlook and such abilities. At present they are far from being so convinced. It is scarcely to be wondered at. Too often and too extensively in our various Association gatherings throughout the year do the more combative elements assume control and endow the records of

those meetings with a character that obscures the undercurrent of lofty thought and purpose that is undoubtedly there. We know that many, perhaps the majority, in the profession are animated with feelings of intense devotion to the cause of education. But this is a day of noise and bustle; and the still, small voice of Idealism is lost in the roar of the fire and the rushing of the wind.

How shall we win our way to public confidence and esteem? Surely not by this suggested union with Labour. Already the danger exists that the public shall be led to think of the profession somewhat as an enormous trade union—a danger unfortunately, but undoubtedly and inevitably, fostered by the strikes or threatened strikes on the part of certain sections of teachers. And, although it may safely be said that the great majority of teachers would refrain from using the strike weapon, the indiscriminating public is unable to realize that fact and classes us all together.

It is, of course, an undeniable fact that the Labour Party alone of all the political parties has given evidence of any living interest in education, and alone has formulated a definite education policy. That any party whatever should have so spoken is matter for rejoicing, and it would be unbecoming, as well as ill-advised, in us not to accept as far as may be possible the assistance which so powerful a body can lend to our cause. We welcome the co-operation of Labour in securing the aims of education as we should welcome that of any other section of the community.

But definite attachment to the Labour Party is another matter. I speak neither for nor against any particular political party. It is, however, idle to deny that Labour is gravely suspect by many—not, be it added, in respect of the purity of the motives inspiring its educational policy, but in its general political trend. Such an alliance would thus destroy at a blow the confidence of the public, while it would infallibly split the profession from top to bottom.

Let it be emphasized that there is no political bias in this point of view. Whatever personal political opinions we may hold, it should be regarded as nothing short of a calamity for the cause of education to be identified with any particular group. Quite apart from the many minor questions that would arise, there is the fundamental duty that is ours of insisting on the *national* character of education. One could as well conceive the legal or medical profession affiliating itself to some particular party, and the administration of justice or the welfare of the national health being made a question of party politics.

The greatest educational movement of recent times is the steady progress towards unification. What with registration, Whitley Councils, united conferences, joint professional associations in various parts of the country, the employment of teachers as occasional inspectors, the representation of teachers on education committees, the setting up of advisory and consultative councils, and what not, the lines between secondary and elementary, between heads and assistants, between administrators and teachers, are becoming gradually more and more shadowy. We are achieving a single "professional consciousness." Outside, too, there is slowly developing a "national consciousness" in regard to education.

These things are of the most profound importance, and it is for us to seize every opportunity for fostering and stimulating them. We must drive home the fact that education is of no sect or creed, no party or group, that in a sound educational system lie the very seeds of a healthy national life; so that it should be a characteristic of the normal civic conscience to demand such a system. Education is no panacea for national diseases. In an immoral community, indeed, it gives but greater power for the working of evil. But in a State that is sound at heart it provides the means, through breadth of outlook, sympathy, and understanding, for international peace, and furnishes safeguards, through community of interest, power of thought, soundness of knowledge, and sanity of judgment, against the perils that may assault the nation from within.

"WHAT WE MAY COME TO."

To the Editors of *The Journal of Education and School World*.

DEAR SIRs.—Millet's last remark at that master's meeting was: "To wilfully and of set purpose repress—."

The proof I corrected had it right; but no doubt you have given orders on no account to allow a split infinitive houseroom in your pages; and this, I am afraid, has damped the end of my squib.—Yours faithfully.

THE WRITER OF THE ARTICLE.

January 12, 1920.

SALARIES IN SECONDARY SCHOOLS.

To the Editors of *The Journal of Education and School World*.

SIRs.—Now that the grievances of elementary-school teachers have been partially met by the granting of a minimum wage, perhaps the Board of Education will take the necessary steps to do justice to secondary-school teachers in the same statesmanlike way. The urgency of the matter can be realized on looking through a column or two of those educational journals which open their columns to advertisements, when the disparity between salaries offered by different authorities will be seen to be alarming. This disparity is the more glaring when it occurs in schools in the same county, and often the worst offenders are the endowed schools. In many cases these ancient seats of learning have been in troubled waters for years, and to offer the salaries now paid by some of the more progressive authorities would mean insolvency. In some cases they have been kept alive by grants from County Councils to save the latter the expense of building schools of their own. But the question arises: "How long ought an endowed school, almost independent of a county authority but in receipt of county grants, to usurp the functions of a county school when it will not, or cannot, pay the county scale?" Surely all county authorities, before making such grants, ought to make it a condition that the county scale is paid to all teachers in the said schools. The following two cases, in the same county and within a few miles of each other, will show the necessity of State action and, if necessary, of State assistance.

A.—Lancashire County School.

(a) Scale for male graduates, £180 to £450.

(b) The L.E.C., from April 1 last, placed every graduate at the point of the scale he would have occupied if the scale had been in force when he joined the staff.

(c) Six of the eight male graduates are in receipt of salaries ranging from £350 to £420 a year, two having had increases of £170 a year. (Facts verified by the Director of Education for the County.)

(d) Feeling that the teachers are adequately remunerated, the L.E.C., in the interests of both teachers and pupils, limits its teachers to work on two evenings per week.

B.—An Endowed School, practically independent of County, but in receipt of County and Board of Education Grants.

(a) After repeated applications for help, the Governors grant the county scale, but do not make it retrospective, as in the County.

(b) Not a single master (a dozen in the school) receives more than £350 (the average is about £250), although several have had twenty years' teaching experience, and all are graduates.

(c) Inadequately paid, the staff are keener than any staff I have known for paid work in out-of-school hours.

The moral is plain. There will continue to be unrest and dissatisfaction in the profession, and a continued shortage of teachers, until these monstrous inequalities are swept away. As long as teachers are paid miserably inadequate salaries, they will have to take on excessive evening work, which reduces their efficiency and their opportunities for further culture and leisure. Until Mr. Fisher introduces a satisfactory national scale for secondary teachers, there cannot be that educational leap forward that we are all anxious to see.—Yours faithfully,

W. R. F.

THE first issue of *Discovery*, a monthly popular journal of knowledge, published by Mr. John Murray, at 6d. net, contains seven articles, some editorial notes, and a few columns of book reviews in its twenty-four pages. Prof. R. S. Conway writes on the secret of Philae, Dr. S. Price on smoke screens at sea, Prof. T. H. Pear on the modern study of dreams, the Master of Balliol on discovery and education, Dr. A. S. Russell on sound-ranging in war time, and Dr. Rudmose Brown on Spitsbergen. We are a little doubtful if the average educated reader will understand some of the terms in the scientific articles, but we are sure that the new magazine may appropriately find a place on the table of all school reading rooms.

THE NEW ASTRONOMICAL MODEL.

Specially designed for use in Schools and Colleges by WILLIAM WILSON, M.B., C.M., F.R.A.S.

BOOKLET

ENTITLED

The New Astronomical Model.

Full Instructions

FOR THE

Erection & Working.

DRAWING

(Size 19 in. x 15 in.)

A half-size Lithographic Drawing, in which all the parts are named and numbered in correspondence with the descriptive account in the Booklet.

The above Booklet and Drawing were originally prepared solely for the use of those purchasing the Model as affording all needed information regarding its Erection and Working.

It is, however, possible that some who have not had an opportunity of seeing the Model demonstrated may desire first to obtain the Booklet and Drawing so as more fully to satisfy themselves as to the method of working, and the very large number of Important Astronomical Phenomena that can be so easily rendered intelligible by the use of the apparatus.

To meet the wishes of such, the Booklet and Drawing can now be obtained independently of the Model, post free, **Three Shillings**, and on the subsequent purchase of the Model this sum will be deducted.

In addition to the above, a 16-page Illustrated Pamphlet, post free, **6d.**, is obtainable, supplying general information respecting the apparatus—Motions reproduced, Phenomena demonstrated, Public Demonstrations given, Letters of Appreciation from 20 Astronomers and Educationists, together with particulars regarding Price, Packing, Carriage, &c., &c.

All communications to be addressed to the Inventor, Patentee, and Sole Proprietor—

Dr. WILLIAM WILSON, 43 Fellows Road, London, N.W.3.

Catalogue and Announcement List on application

JUST PUBLISHED

A Primer of French Pronunciation

By STANLEY W. GRACE, B.A., Assistant Master at Malvern College, formerly Lecteur Anglais at the Lycée of Laon. Crown 8vo. 3s.

This book deals systematically with a subject which presents many difficulties to the English-speaking student. The various sounds, vowel, nasal, and consonantal, are carefully analysed, and division into syllables, liaison, and intonation are also dealt with. There is a useful list of words frequently mispronounced, and valuable suggestions for teachers are given regarding dictation, pronunciation tests, and oral examinations.

Practical Science for Girls : Its Application to Domestic Subjects

By EVELYN E. JARDINE, M.A., B.Sc., County Secondary School, Runcorn. With 10 Diagrams. Crown 8vo. 3s.

A three years' course in Physics and Chemistry for Girls, planned in correlation with the usual Domestic Science Course, including cooking, laundry work, and household management. The work of the first year comprises exercises in volume, weight, density, and heat; that of the second year, exercises in chemistry; and that of the third, the examination and preservation of foods and elementary bacteriology.

A Text-Book of Hygiene for Training Colleges

By MARGARET AVERY, B.Sc., M.R.San.I., Vice-Principal, Warrington Training College. With 99 Illustrations. Crown 8vo. 7s. 6d. net.

This volume covers the subject matter of the Board of Education Certificate Examination and is thoroughly up to date. The treatment of such topics as Fatigue, Home and School Sanitation, Special Schools, Infant Welfare, and Legislation affecting Children should prove specially useful to many teachers as well as to students in training.

"One of the best of its kind, clear, well illustrated, and up to date."—*Scottish Educational Journal*.

The Engineering Draughtsman

By E. ROWARTH, A.M.I.E.E., Battersea Polytechnic, London, Author of "The Elements of Engineering Drawing." With 96 Plates and 157 Examples. Demy 8vo. 10s. 6d.

This is not a beginners' book, but is intended for students already familiar with the elementary principles of Engineering Drawing. It provides them with a comprehensive course of drawing office work similar to that of a draughtsman during his apprenticeship.

"The book covers a wide field, and the variety of the work illustrated is such that students should be able to make sets of working drawings of complete machines of many different kinds."—*Glasgow Herald*.

BELL'S NEW BOOKS

EUROPE AND THE LEAGUE OF NATIONS.

By **CHARLES SAROLEA, D.Ph. and Litt.**, Professor in the University of Edinburgh. In this volume this well known publicist deals with the present position of European diplomacy, and points out the way by which the ideals of the founders of the League of Nations may be resolved into a practical instrument of lasting Peace. **Crown 8vo, 6s. net.**

"Prof. Sarolea has gained a high reputation as a guide through the mazes of this labyrinthine problem. His new book justifies this reputation. . . . The substance of the volume is rich in well-considered, ponderable lessons for everyone who seeks to realize the functions of the League and to help forward civilization in a serious international effort to overcome the obstacle of war."—*Scotsman*.

THE EXPANSION OF EUROPE. A History of the Foundations of the Modern World.

By **W. C. ABBOTT, B.Litt. (Oxon.), M.A.** The author by judicious selection has avoided the tedium and dryness so often associated with historical studies, and has written a book which is at once dynamic, intelligible, and of never-failing interest. With 45 Maps and 55 Illustrations. **Two vols., demy 8vo, 30s. net.**

"A very important contribution to historical literature. Especially noteworthy is the full description of geographical exploration and discovery: the whole account of the early voyages, and especially the history of Portuguese enterprise, will be found of the greatest use to all students."—*The Times*.

FIFTY YEARS OF EUROPE: 1870–1919.

By **C. D. HAZEN**, Professor of History, Columbia University. A clear exposition by a distinguished historian and attractive writer of the doctrines and policies which for fifty years kept Europe constantly in fear of war. A book of the greatest interest and value in estimating the possibilities of the future. **Demy 8vo, with 14 Maps, 14s. net.**

THE ENGLISH MIDDLE CLASS: An Historical Study.

By **R. H. GREYTON**, formerly Demy of Magdalen College, Oxford. **8s. 6d. net.**

"An admirable example of social and economic investigation."—*New Statesman*.

"... This very interesting and scholarly book. . . . A brilliant achievement in historical analysis and interpretation. Mr. Greyton's handling of a great mass of material is a triumph."—*Manchester Guardian*.

GREEK IDEALS. A Study of Social Life.

By **C. DELISLE BURNS**. **6s. net.**

"There are few books," says the *Morning Post*, "which are trustworthy guides to the practical aspects of Greek society and character, and among these 'Greek Ideals' holds a high place in our opinion, and should be read by all who wish to know what the least sentimental and most social-minded of peoples thought of the very problems that are exercising the minds of men this very day."

THEOCRITUS.

Edited, with Introduction and Notes, by the late **R. J. CHOLMELEY, M.A.** Post 8vo. New Edition, revised and augmented. **10s. 6d. net.**

"He has produced a better text and a better commentary than any other we are acquainted with."—*Athenaeum*.

"A new English edition of Theocritus has long been wanted. . . . Mr. Cholmeley's elaborate edition is well worthy to fill the void, and is likely to be the standard work among English students for many years."—*Educational Times*.

A REVIEW OF FIRST SCHOOL EXAMINATIONS.

CIRCULAR 849 of the Board of Education (containing proposals for the better organization of examinations in secondary schools) referred to the need of an advisory board entrusted with the duty of inquiring into existing school examinations conducted by universities, and of bringing about uniformity of standard. In 1917 the Secondary School Examinations Council was established. In 1918 the following seven examinations were approved, on the recommendation of the Council:—Oxford and Cambridge School Certificate, Oxford Senior, Cambridge Senior, Bristol School Certificate, Durham First School Certificate, London General, and Northern Universities Joint Matriculation Board School Certificate.

The Council then appointed a body of investigators to inquire into the methods and standards of award in the seven approved First Examinations, held in July 1918; the investigation was held in December 1918 and January and February 1919. Mr. C. Norwood acted as chairman, and Mr. Chr. Cookson as secretary to the investigators as a whole, and seven panels were constituted:—

GROUP I.—English: Mr. J. H. Fowler, chairman; and five others.

History: Mr. J. Wells, chairman; and seven others.

Geography: Mr. C. B. Fawcett, chairman; and five others.

GROUP II.—Classics: Prof. R. S. Conway, chairman; and nine others.

Modern Languages: Mr. H. J. Chaytor, chairman; and eleven others.

GROUP III.—Mathematics: Prof. H. H. Turner, chairman; and ten others.

Science: Mr. J. Talbot, chairman, and fifteen others.

A selected number from each panel were concerned in each particular investigation, so that every member obtained an insight into the working of several examinations; and each panel included one of H.M. Inspectors, who took part in every investigation.

The panels submitted confidential reports on each examination, as well as subject reports based on their experience of all the examinations. The latter have now been issued by H.M. Stationery Office in three pamphlets (each 4d. net), dealing respectively with Group I (English, History, Geography), Group II (Classics, Modern Languages), Group III (Mathematics, Science).

In the preface to these pamphlets it is cautiously stated that "it must not be assumed that either the Council or the Board are at present committed to any or all of the suggestions contained in them"; but this in no way detracts from the importance to be attached to the reports of seventy experts whose names command respect, and who have had exceptional opportunities of forming conclusions as to existing methods of examination and of offering suggestions for their improvement. A perusal of these reports shows that their careful and conscientious inquiries have indeed produced very valuable results, to which more detailed reference will be made later.

Consideration of the subject reports as a whole, however, fails to give unalloyed satisfaction. Not all the panels have risen to the height of the occasion. While some have provided a fairly full statement of the various aspects involved, others have contented themselves with a mere list of more or less disconnected conclusions. It would have been better if some scheme had been thought out to which all the reports would have conformed. As it is, suggestions of a general kind are given in some individual reports, and others leave out of account important matters about which the views of the investigators would have been helpful.

The most serious drawback, however, is the neglect to make use of this unique opportunity for an inquiry, on broad lines, into the methods of examining. There should have been yet another panel for this purpose. The Board of Education have experienced examiners; the Civil Service Commission specialize in this work; and some of the examining bodies have experts that might have been added to the panel. Such a panel would have given attention to a number of important questions, some of which are touched on in the investigators' reports, but hardly any of which have received adequate treatment. In the hope that the School Examinations Council may take an early opportunity of devoting attention to the matter, some of these questions are here indicated.

(a) Principles to be Observed in the Appointment of Examiners.—Should all possess present or past experience as teachers in secondary schools? Should the existing disproportion between men and women examiners be maintained? For what period should examiners be appointed?

(b) Relation of Inspection to Examination.—Can this be rendered effective unless the inspecting authority and the examining body are the same? To what extent does this prevail at present?

(c) Relation of Teachers in Schools to Examination.—What weight is attached to their estimates of the candidates' merits? To what extent are conferences held between the examining body and (1) heads of schools, (2) specialist teachers? Have the teachers any concerted means of submitting to the examining body their criticisms of papers that have been set, or suggestions for improving the examination with which they are concerned?

(d) Uniformity of Standard.—(1) The functions and status of moderators, responsible for the suitability of the papers and the maintenance of the same standard of difficulty. (2) Means of remedying variations due to the personal equations of several examiners when they mark the same paper. (3) The encouragement of judicious originality in questions, and avoidance of repetition of the same or similar questions year after year. (4) The treatment of difficulties arising from the submission of special syllabuses.

(e) The General Character of the Papers.—(1) Length of

time suitable? (2) To what extent is choice of questions desirable? (3) Should the maximum mark for each question be stated in the paper?

(f) Marking.—(1) The relative value and suitability according to subject of various methods of marking: (i) by impression of a whole question, passage, &c., or of sections of the same, or by standards (e.g. A, "Excellent"; B, "Good," &c., to each of which a fixed number of marks is assigned); (ii) destructively, marks being deducted for mistakes. Should the examiner be at liberty to add a bonus ("grace" or "merit" marks) on the strength of his impression of the performance as a whole? Should marks be deducted for poor English, defective spelling, bad handwriting; and should this be done in "English subjects" only or throughout the examination? (2) The dangers attending the assignment of maxima that are too high or too low. (3) The difficulties of determining the credit mark. In any examination, those in the "first class" and those "not classed" are distinct from the bulk of the examinees, but there is no clear dividing line between the second class and the third, and it is here that we have to determine the border line for "credit."

General conclusions on these points would be of great value to the examining bodies, and many of them would also be applicable to the internal examination of schools.

Turning to the individual subject reports, we note the following matters of interest:

English.—The composition paper should include essay, précis, and questions on grammar and composition, but no "formal grammar," and the introduction of a "reproduction" (in itself a "good exercise") is unnecessary. A pass in the essay should not be made obligatory, because "there is no subject in which examiners are more liable to differ in their estimate of the value of an exercise, and no subject from which it is more difficult to eliminate the element of chance." A candidate's success should be determined by his achievement in the English papers as a whole.

In literature, books should be prescribed, but with a good choice of alternatives. There should be no questions on general literature at this stage.

History.—This is perhaps the least satisfactory of the subject reports, which is all the more to be regretted, as more complaints are received of examinations in this subject than in any other. Little is to be gained from such a statement as "It is considered most important that questions should be set testing both accurate knowledge and power of thought and generalization"; or, "There is always a danger of too great credit being given for the mere reproduction of good notes. This danger should, as far as possible, be guarded against in the setting of questions." It would have been much more helpful if the investigators had supplied specimens of good and bad questions.

No indication is given to what extent a choice of questions should be allowed; whether all should receive equal marks; how much average time is desirable for answering the questions; within what limitations schools should be allowed to offer special syllabuses, &c.

Geography.—In its comprehensive treatment this is perhaps the best of the reports. The investigators, after careful consideration, recommend that "no special region other than the British Isles should be prescribed." They dwell fully on the form of the papers (length of time, choice of questions, division into sections, &c.); and, in discussing the marking, point out, as a serious defect, "a general reluctance on the part of examiners to give high marks for answers which were really good for candidates of sixteen years of age." A special section is devoted to sketch maps; it appears that examiners do not attach sufficient importance to these.

In an Appendix (Joint Recommendations of the Examiners in Group I) the opinion is expressed that Geography should appear in both Group I and Group III. The majority favoured the inclusion in Group I of religious knowledge, but regarded the existing tests as too easy. They approve, with reservations, of special syllabuses. They are almost unanimously of opinion that there should be no compulsory papers; but a good command of English and the power to write it

intelligently should be regarded as an essential qualification, to be tested especially, but not exclusively, in the papers set on subjects in Group I. There are also some suggestions for marking; the giving of "merit marks" (not exceeding 10 per cent. at most) is approved, but "charity marks for vague answers and imperfect generalizations should be given very sparingly."

Classics.—The investigators state at some length the objects which should be sought in classical examinations at this stage. They consider it should test "a knowledge which would normally have been acquired in four years' training in Latin and a somewhat shorter, but still substantial, training in Greek." This seems to leave out of account that in most secondary schools with which the Board of Education is concerned Latin is a second foreign language in which at the outside three years' instruction is provided. It is usually alternative to a modern language, and the investigators in modern languages state in their report that "not more than two years' study of a second modern language can be presupposed in the generality of cases." The classical scheme seems consequently rather more ambitious than circumstances warrant; it demands literary and historical study which in a normal three years' course can be attempted only in a very elementary fashion. Much attention is devoted to the question of set books. The reading of continuous texts is rightly demanded, and it is implied that, in the majority of cases, this can only be secured by examining in prescribed books. The investigators do not, however, exclude unseen translation as an alternative, but it "should be allowed only to those schools which have satisfied the examining body by definite evidence that their pupils have duly pursued a course in the continuous reading of authors." In inspected schools this should be an obvious requirement; and in others a teacher would surely be willing to supply this definite evidence rather than have his liberty of choice impaired. The rest of the classical report contains no points of outstanding importance. It is, however, worth noting that no protest is raised against the deplorable way in which knowledge of accident is often tested by classical examiners.

Modern Languages.—The conclusions of this sane, well planned report are in agreement with good modern practice. The paper should include prose and verse unseen passages, set composition, and free composition. The verse unseen should not be sentimental or introspective; the passage for translation into the foreign language should be in simple language. Various methods of testing free composition are enumerated; the investigators favour a subject of which the treatment is indicated by the "briefest possible headings in the foreign language." Three-hour papers are regarded as too long; and "no foreign-born examiner should examine written work." No modern language examination can be regarded as complete which does not make provision for testing all candidates in dictation and reading aloud, if not in conversation.

There is an Appendix of recommendations jointly made by the investigators in Group II, but it contains little that does not appear in the separate subject reports.

Mathematics.—The report takes the form of a number of conclusions. The following appear to be of special importance:—Candidates should be judged for all purposes on the aggregate marks for the three papers (Arithmetic, Algebra, Geometry), without subordinate conditions. Questions on the use of logarithms and similarity should be included; also questions on numerical trigonometry, but not to such an extent as to compel schools to take it up. Algebraic processes and symbols should be allowed in the Arithmetic paper. "Additional Mathematics" should be retained as part of the examination, but should not include conic sections and calculus.

Nothing is said about length of papers, choice of questions, the inclusion of straightforward questions in the Arithmetic paper, avoidance of an excess of complicated calculation; nor about the very important question whether Arithmetic or Elementary Mathematics should be compulsory for all candidates.

Science.—This report contains a great deal of interesting and valuable matter, which it would be difficult to condense. The main headings are: (a) the content of Group III—it is suggested that two at least of the following subjects should be obligatory: (1) Mathematics, (2) Physics, (3) Chemistry, (4) Physics and Chemistry [not to be taken by those who take (2) or (3)], (5) Botany; (b) the content of "Physics" (particularly valuable); (c) the position of Mechanics; (d) provision for the combination of Physics and Chemistry; (e) practical examinations in Science; (f) the arrangement and content of papers in Botany; (g) the position of Natural History.

Reviewing the reports as a whole, we cannot but appreciate the skilled and conscientious work of the investigators, which should have extensive results in improving the seven First School Examinations that have been approved by the Board of Education.

UNIVERSITIES AND SCHOOLS.

WALES.

Mr. J. Herbert Lewis, M.P., Parliamentary Secretary to the Board of Education, in an address before the Association of Past Students at the University College, Cardiff, explained rather fully the

Public Libraries. provisions of the Public Libraries Act, which should form a useful appendix to the Education Act of 1918. The removal of the penny rate limitation will enable county councils to put the Public Libraries Acts into force throughout the county areas, and we should presently see a large extension of the library system into the most remote country places, so that in each village there should be a constant supply of books for circulation. There was also another important development now possible, a central library for each county with an expert librarian in charge, who would not only direct the distribution and exchange of books for the outlying area, but would be the adviser of all persons seeking knowledge. Should the Act be administered in no niggardly spirit its possibilities for good are great, and many a remote part of Wales, often the home of much natural but undeveloped talent, should receive much enlightenment and intellectual pleasure.

At a conference held at Swansea on January 9, an illuminating address on this important question was delivered by Mr. F. W. Gilbertson, who is the chairman of the Education Board of South Wales Manufacturers. At the present time the industrial population is split into two bodies, the relation between them being in process of modification. We were witnessing the cohering of those who worked with their hands into a political block animated by a single policy, and therefore likely before long to be entrusted with the responsibility of governing the country. It was therefore obvious that the interest of the country required that they should be as well prepared to take their part as education can make them, and that the power of forming balanced opinions, of sifting evidence, of realizing the limitation of individuals' knowledge, and the creation of a body of citizens capable of producing a sound public spirit, are far more important aims, just now, than the achievement of mere technical efficiency. No honest observer would deny that the public schools had produced a saner and more dutiful public spirit than any other agencies in history. This and other considerations led him to recognize the vast importance of the quality and outlook of their teachers. They should be a body of persons properly trained, with broad vision and the highest traditions of the Civil Service. The speaker also directed attention to the large proportion of unskilled labourers employed in the works. He was also strongly of opinion that we must modify the views commonly held and accept the conclusion that early specialization was of no value to those who were going to enter industry. From this point of view, whole-time general education to sixteen at least with every subsequent opportunity for attending voluntary continuation schools was the best suited for the industrial population. In Wales, fortunately, the machinery of education was difficult to improve, and ample facilities existed for all who were worthy of such higher education, and he therefore urged (1) all parents to take the fullest advantage of all facilities for better or special education, and (2) employers to find room at a proper rate of remuneration for university graduates who desire to enter industry and give facilities to university students to gain practical acquaintance with industrial processes during their vacations. As Mr. Gilbertson is generally regarded as one of the most influential of the industrial magnates of South Wales, it is to be

hoped that his views will be duly noted by all his colleagues, because, hitherto, not much encouragement has been given by them to university graduates, and it is notorious that they have usually looked askance at the employment of a due proportion of such men in their works.

At the same conference, Prof. J. Jones, of Brecon, outlined his views as to the future control of secondary education in Wales. He made some caustic references to the present Welsh Department, which is a mere appendage to the Board

Control of Secondary Education.

of Education and therefore not suited for the responsible duty of acting as the supreme authority. The Central Welsh Board, on the other hand, stood for the democratic ideal which appealed so strongly to the Welsh people; and in his opinion, no solution of the problem before the Departmental Committee of Inquiry was possible which did not recognize control by the people as a fundamental principle. The simplest solution was to be found in a measure of complete autonomy by which Wales would have a Parliament of its own, an Education Minister of its own, and an Education Department of its own. But as there is—as yet, anyway—but a slight possibility that this ambitious scheme will materialize, he suggested the reincarnation of our old friend the National Council to take the place of the Board of Education, with the further addition, in order to maintain Imperial control over all funds, of a Minister for Education. Unfortunately, we fear that all these suggestions, which are not by any means new, do not throw much light on the present difficulty, and they strike one rather as short cuts to a solution. The appointment of a Minister would, of course, alter the whole situation and sweep away most, if not all, of the present anomalies; but it is more than probable that such a revolution in our relationship to Parliament cannot be effected in the near future and that some other and less ambitious plan must be discovered to deal with this question of educational reorganization. Mr. T. Botting, Director of Education for Aberdare, read a paper on Part III Authorities, and several subsequent speakers supported his contention that their claims for more powers of control should be allowed. The interrelationship of the university and the secondary school was discussed by Mr. J. Trevor Owen (Swansea), who was of opinion that, whatever the powers and constitution of the controlling body will be, the demands of secondary education are so great and complex that a special authority should be created which would have full executive powers to deal with this branch of education. He also strongly objected to transferring the control of the schools to the University Court, and also deprecated the separation of inspection and examination: they should be conducted by the same authority. Other topics dealt with were: the supply of educational facilities, by Mr. T. J. Rees (Swansea); the problem of children in scattered areas, by Mr. D. E. Williams (Gowerton School); and the relationship of the primary to the secondary school, by Mr. W. Edwards (Chief Inspector Central Welsh Board). Mr. Edwards believed that the scheme as drawn up for Glamorgan was calculated to carry out with great success the provisions of the Act, and that, generally, Wales was determined to make the fullest use of the new opportunities. The conference on the whole was instructive, and no doubt the Commissioners gained a new light on some of the problems before them, as most of the papers were relevant and well thought out.

This Committee have published their recommendations to the Departmental Committee. They are to this effect: (1) that closer co-ordination between elementary, secondary, and higher education is essential; (2) that inspection and examination of secondary and elementary schools shall be conducted by one central authority; (3) that adjoining counties should be required to co-operate in the provision of secondary education in the most accessible county school, irrespective of the home-county of the pupil; (4) that properly controlled hostels are essential in county schools; (5) that colleges should be established to provide special teachers in physical training and other essential technical subjects; (6) that the present local governing bodies should be retained with undiminished powers, subject to the review of the financial relations between them and the county authority.

The first recommendation is vague, and we should like fuller details as to the best method of establishing such co-operation. Everyone agrees with this principle, but the problem before us at present is how best to give effect to it; but apparently Anglesey has not faced it seriously. At present there is in practice a great deal of co-operation between the elementary and the secondary school, as well as between the latter and the university, and we are not sure that very much more is possible in Wales, for one system has grown automatically from the other. The second recommendation is not clear. Does it mean that both the secondary and the elementary school shall be examined and inspected

The Anglesey Education Committee.

by some such body as the present Central Welsh Board with, say, the same panel of inspectors? And is it proposed to revive that obsolete system of primary school examination? We should like more light on this recommendation, for, as it stands, it does not appear to be educationally sound. We are glad to see that the powers of the local governors should, as far as possible, be left unimpaired, for anything that tends to diminish local interests is likely to have a detrimental effect on the efficiency of the schools. Just now the tendency is to concentrate all powers in the county authority which, whatever its advantages from an administrative standpoint, has many counterbalancing disadvantages.

There is much discussion over a resolution of the Education Committee at Wrexham that Welsh shall not be taught in the elementary schools in that town. Though it is on the English border there is a strong element of Welsh in the population, and this section feels that the action of the Authority is a serious reflection on their language. Their protest is also generally supported throughout the Principality.

Wrexham and Welsh.

Major W. P. Wheldon, D.S.O., has been appointed registrar of the University College, Bangor. Up to the present Dr. J. E. Lloyd has held the registrarship, together with the professorship of history, but, owing to pressure of work, he has now resigned the former office.

Appointment.

SCOTLAND.

The new year congress of the Educational Institute at St. Andrews marks a welcome return to pre-war practice. Since 1914 the succession of annual congresses held at different centres throughout Scotland has been suspended, and only single-day conferences without the pomp and ceremony of the congresses have been held. The choice of St. Andrews on this occasion was a happy one. In these modern times the ancient city lives and has its being in golf and education, and its interest in education made its welcome to the members of congress warm and friendly. Sir John Herkless, the principal of the University, and the Rev. Dr. Sloan, the provost of the town, vied with each other in making the teachers at home. There was a pleasant sincerity in their greetings at the opening meeting, and this good feeling was later expressed in the fine reception accorded to the congress by the Town Council at the end of the day's proceedings.

Ceremonial business occupied a considerable part of the time at both of the first day's meetings, only one paper being read at each. In the morning, Mr. Glover, the president, gave a general survey of the educational situation, discussing in his quiet effective way the salary scales and the grievances of the primary teachers. In the afternoon, Mr. D. Kennedy Fraser, lecturer in Education in Moray House, Edinburgh, dealt with the topical subject of "Educational Research." But, good as both papers were, they were to some extent eclipsed in interest by the appearance of Prof. John Burnet, professor of Greek in St. Andrews, and one of the most outstanding of university teachers in Scotland, and the Hon. Robert Munro, the Secretary of State for Scotland, to receive the Honorary Fellowship of the Institute. Both men, in addressing the congress after receipt of the Fellowship, showed themselves appreciative of the honour that had been done them, and well indeed they might. The inclusion of their names brings up the number of honorary graduates in the last twenty years to a score, and associates them with the most honoured personalities in the recent history of Scottish education.

On the Saturday morning the congress settled down to serious business with a programme that included some of the most important subjects that are occupying the minds of Scottish teachers at the present time. Dr. Boyd, of Glasgow University, opened the morning session with a vigorous paper on "The Training of Teachers." Coming from one with his inside knowledge, his indictment of the existing system was serious. According to him, the students in the training colleges are demoralized by the multiplicity of subjects that are crowded into too short a period of training, and by the debasement of the standards of work that follows inevitably from the fact that practically everyone passes in every subject. The root of the evil was in the too close control of the colleges by an over-efficient Education Department. Lacking independence, the colleges had failed to develop traditions or ideals, and had, consequently, no power to inspire either lecturers or students. He advocated an extension of the period of training from two years to four: contended, indeed, that the undue differentiation of salaries as between non-graduates and graduates had made extension inevitable, and that the teaching profession would never

The New Honorary Fellows.

The Training of Teachers.

be satisfied now with a short-term training that continued the difference into the future. His view was that every teacher in training should take the course leading to a degree in arts or science, and that only the professional training should be done in the training college. He looked forward to a time when these colleges and all the central institutions would be affiliated to the universities. Meanwhile, till the universities were prepared to undertake this increase in their responsibilities, he urged that the colleges should be allowed much greater freedom under the re-constituted Provincial Committees than they had hitherto enjoyed.

The Proposal for a B.A. Degree.

In the discussion which followed Dr. Boyd's paper, one speaker called attention approvingly to the proposal made by Prof. Burnet that a B.A. degree, including a selection of the arts subjects which have a special bearing on the teacher's work, should be instituted in the Scottish universities. The plan seems to be that the period of training should be spread over three years, and that, alongside the professional work, two university classes should be taken in the first year, one in the second, and two again in the third. The proposal met with a somewhat mixed reception from the congress. Those who thought that, in spite of Dr. Boyd's optimism about the supply of teachers, it would be impossible to get sufficient teachers with a four years' course, were inclined to favour the B.A. idea as a workable compromise. But there was a body of opinion against it on the ground that it would be a cheap degree that would not raise the status of the profession. Those who were discussing the subject do not seem to have been aware that the B.A. scheme had ceased to be a live issue in educational politics before the congress met. A week or so before it had been rejected by the Senate and by the Court of Glasgow University. Since it is practically, if not legally, essential that all the Universities must be in agreement in a matter of common concern like this before the necessary ordinance can be secured, the action of Glasgow makes it unlikely that any further steps will be taken towards the institution of a B.A. in the meantime.

Dr. Morgan, who has for many years been principal of Moray House Training College and has just been promoted to the Directorship of Studies under the Edinburgh Provincial Committee, dealt in a masterly way with the schemes that are

The Further Training of Teachers.

afoot for the further training of teachers. One aspect of the subject has been much in the thoughts of non-graduate teachers during the last month or two. Many of them are eager to know how they can make the additions to their qualifications which will put them on a level with graduates in respect of salary and status. To meet their case Dr. Morgan suggested that summer courses on a graduation level shall be held in at least one of the universities, in which the chief subjects of school education (especially literature, languages, sciences, mathematics, history, geography, and economics) would be taken up. Dr. Morgan's scheme is apparently different from that set forth by Prof. Darroch in a memorandum prepared for the Edinburgh Provincial Committee. Prof. Darroch's proposal is that each course for non-graduates should be spread over two summers and a winter—a month in the summer and twenty weekly meetings in the winter. Dr. Morgan spoke more vaguely of the whole training occupying five or six summers. Though the latter scheme received general approval at the congress, it will be interesting to await the more considered judgment of the non-graduates. It does not seem likely that a sustained course of study that is to be on a university level and yet is not to lead to a degree will satisfy them.

Dr. Morgan went on to advocate the establishment of vacation classes of an advanced nature as a normal part of the work of the universities, in order to equip ordinary graduates for teaching in the secondary schools. All were agreed, he said, that the secondary schools must have specialist teachers whose knowledge of their subject was on the M.A. honours level. But the universities were not turning out a sufficient number of honours graduates to meet the demands of the schools, and some addition to the ranks of properly qualified teachers by means of post-graduate instruction was imperative. Anticipating the objection that the universities were not likely to undertake vacation classes, he hinted, not obscurely, that Edinburgh University might be making a start in the coming summer. This would certainly be a welcome new departure.

At the closing session of the congress two papers were read: the one on "Labour and Education," by Mr. Henderson, the Editor of the *Scottish Educational Journal*; the other on "Primary Education," by Mr. D. J. Young (Cowdenbeath), the Secretary of the Fifeshire Branch of the Institute. The paper on primary education had obviously been included in the syllabus to allow primary teachers in general and non-graduates in particular to express their discontent. From that point of view Mr.

Young's paper was a success. It made a forcible yet temperate protest against the tendency to underrate the importance of the primary teacher and his work. On the vexed question of existing non-graduate teachers Mr. Young had nothing new to say. His most valuable point had reference to the future. He wanted the day to come when there would be only one class of teacher, having one aim and one value to the State. That implied a full course of university training for all future teachers. Following on the address a resolution was passed with unanimity insisting on all existing teachers being placed on the graduate scale and urging the Institute to use every endeavour to secure from the Authorities the acceptance of this view. If the resolution is not mere words, like most resolutions, this means that the Institute will have to attempt to compel all the backward authorities to bring their non-graduate teachers up to the level of the graduates, in the event of a refusal to do so on their own initiative. It would be most unfortunate if the salary struggle were to continue in this fashion. Everybody had hoped that the institution of the minimum scales would allow Scottish teachers to forget all about salaries for a long time to come.

The Secretary for Scotland has been industrious in speech-making during the parliamentary recess, and his main theme has been Scottish education. He is evidently apprehensive of the effect on

Mr. Munro's Deliverances.

public opinion of the attacks that are being made on the Act of 1918, and is trying his best to counter them, partly by re-stating the case for a bold measure of educational reconstruction and partly by seeking to ease the burden where it presses unduly. In the latter connexion the announcement of a forthcoming change in methods of rating, first announced at the St. Andrews congress and confirmed at a conference with representatives of the local authorities, is of special interest. The financial difficulties which have arisen in the course of bringing the new Act into force have been greatly accentuated by the present system of rating, and any scheme which removed the grosser anomalies of rating would make it much easier to complete the operation at a comparatively early date. Apart from rating troubles, however, Mr. Munro is being hampered in realizing the provisions of the Act by the limitation of new expenditures on Scottish education to eleven-eighths of the corresponding English expenditure. This means that Scotland must hang back till the charges consequent on the English Act mount up and warrant an equivalent expenditure north of the Border. That and the paying up of "accrued" grants earlier than had been intended in response to the urgent demands of the authorities have compelled Mr. Munro to announce, in a circular of the Education Department, that he has most reluctantly been driven to the conclusion that it would be unwise to hold out any prospect of the Department being able to appoint an early date for the raising of the school age as provided in the Act. In any event there must have been delay in raising the school age till the additional teachers required were available; but the teaching profession will join with Mr. Munro in hoping that this vitally necessary change may not be too long deferred.

IRELAND.

The new year has begun in Irish education with much uncertainty generally, and with much discouragement among teachers in particular. All last

The Uncertain Outlook.

year there was great expectation of reform through Parliamentary action. Briefly, there were the reports of the two Vice-Regal Committees appointed by the Government and presided over by two distinguished Roman Catholics; then there was a committee of experts asked by the Government to draft an Education Bill on the lines of these reports; finally, after much delay, the Bill was introduced, printed, and circulated. Its second reading was put down for December 16, but Parliamentary obstruction prevented the debate coming on, and the Bill was not passed. The question now being asked is: Will it be re-introduced when Parliament meets in February, and, if introduced, will it be pushed through? This raises another and political question: Will the Government introduce and push through a Home Rule Bill, and leave to a Home Rule Government in Ireland to deal with Irish education? There has been no official declaration as to the Government's intentions about the Education Bill, but it is generally believed that the Chief Secretary is in earnest about it, and is anxious to bring it on as soon as possible. Meanwhile, one thing is quite clear: the continued uncertainty is doing much harm to the schools, and, unless the Government in the near future provide funds for education, especially secondary education, in some degree commensurate with those provided in Great Britain, very serious damage will be inflicted, as schools all over the country are in financial trouble.

The Primary Teacher's Point of View.

the Secretary of the Fifeshire Branch of the Institute. The paper on primary education had obviously been included in the syllabus to allow primary teachers in general and non-graduates in particular to express their discontent. From that point of view Mr.

Before coming to the criticism of the Bill introduced last session, we have to record an account of the interview which the Chief Secretary gave in London, on December 10, to a deputation representing the National Teachers' Association, the Secondary Teachers' Association, and the Technical Teachers. He made it clear that, although he knew that the position of teachers needed great improvement, he would not attempt to change their financial condition without reform of the educational system as a whole on lines such as were contained in the Bill. He then explained the mode of payment and the scale of payments under the Bill. The scale for National teachers is complicated, but has generally been accepted as satisfactory; for secondary schools it was proposed to make capitation grants of £8 per junior pupil and £14 per senior pupil, to fix a minimum salary of £100 per annum for men and £140 for women, and to insist on the employment of one registered teacher for every thirty pupils and an additional registered teacher for every additional twenty or fraction of twenty. Increments would be paid for men, at the rate of ten annual increments of £15 and then ten more of £10 up to a maximum of £410; women would receive similar increments of £8 and £12 up to a maximum of £340. Account would be taken of past services in placing present teachers on the scale. Although this scale is not as generous as that recommended by the Molony Committee, it is welcomed as a great scheme and a striking improvement on present conditions. When it became clear that the Bill would not be passed before Christmas, pressure was brought to bear upon the Chief Secretary to make temporary grants or bonuses for the relief of teachers, but either the Chief Secretary or the Treasury was unwilling.

Salaries under the Bill. The Bill has been given a varied welcome. The criticism may be defined roughly as threefold. First, it is denounced root and branch; secondly, there are those who want the financial provisions, but do not care for the administrative clauses; and thirdly, there are those who welcome the Bill as a much needed measure, likely to result in great and lasting benefits and based upon sound principles. The first and second represent mainly Roman Catholic opinion; the last represents mainly Protestant opinion. It is unfortunate that the religious difficulty should now, as so often, stand in the way of the reform of Irish education. It is probable, however, that calm reflection would find a way to meet genuine criticism on the educational side.

How the Bill was received. The main objections to the Bill are concerned with administration, and they are two. First, the new Department which is to have full control of education is to consist of three members—the Chief Secretary, the Vice-President of the Department of Agriculture, and a permanent expert official. It is objected to this that such a department is not sufficiently representative of Irish opinion and will be too overwhelmingly of one religious persuasion. There is much force in this objection, and it could be met by increasing the number of the members of the Department by making it to include the official heads of the three branches of education—primary, secondary, and technical. This would increase the Irish element, would provide for official representation of all branches of education, and would also make possible proper representation of the different religious denominations. The second objection is that the Board of Education, which is to consist of elected and other representatives, is not given sufficient power under the Bill. There is no mention of the number of times it should meet, nor can it insist upon its views being accepted by the Department. Should it meet regularly it would become a proper force, and to this end the Bill should prescribe a minimum number of statutory meetings every year. The danger is that under the present Bill the Board might be called together only once or twice a year, to hear, without much possibility of discussion or initiative, the decisions of the Department. The Chief Secretary would do well to consider these important suggestions. There are, of course, other objections, but it is probable that they could be more easily met if the proposed new Department could be enlarged and the new Board of Education given more real power. But one thing is absolutely certain: Irish education cannot remain where it is, and, unless radically altered, with possibilities of fresh development opened up, it will surely and rapidly deteriorate.

Main Objections to the Bill. The Intermediate Education Board have published a Register of the Intermediate School Teachers in Ireland (price 1s.). This is the first list of the teachers who are qualified under the Registration Act of 1914 and registered as possessing the qualifications laid down by the Registration Council. A brief prefatory note explains the constitution of the Registration Council as composed of representatives of the teaching profession, of the Intermediate Education Board, of the Department of Agriculture and Technical Instruc-

tion, and of such universities and other bodies interested in education as ought, in the opinion of the Lord-Lieutenant, to be represented. The Council, consisting of nineteen members appointed by fifteen different bodies, was constituted by the Lord-Lieutenant by Rules dated April 14, 1915, and February 16, 1916. The principal regulations came into force on July 31, 1918; and additional regulations were published in May 1919. The Register is in five columns. The first column gives the teacher's register number; the second, his other name and date of registration; the third, his or her university degree or equivalent academic qualification; the fourth, the university diploma in the theory and practice of education or its equivalent; and the fifth, the school or other institution in which the qualifying experience was obtained. The total number of registered teachers is 2,159. The number is at first sight surprising, but it must be remembered that most of them are registered under transition conditions; very few have any diploma in teaching, and many have no degree; the permanent conditions requiring both these qualifications do not come into force until 1925. It is curious that no mention at all was made of the Register or the Registration Council in the Education Act.

The Intermediate Board have also issued the time-table of the Intermediate Examinations for the present year. They will begin on Tuesday, June 15, and continue till Wednesday, June 23. The order of subjects and the time allotted to each are much the same as last year. Applied mathematics and drawing come earlier, and music later. Will this be the last examination under the present system?

National Education. The report of the Commissioners of National Education for 1917-18 shows the necessity for educational reform. The attendance in the schools for the year was the lowest since 1908, and it is pointed out that although the compulsory clauses of the Irish Education Act of 1892 have been in existence for twenty-five years, they are inoperative in one-third of the country through the default of the local authorities. With the cessation of war it may be possible to provide new buildings or to replace the many unsuitable teachers' houses which are still in existence. During the year a new scheme of teachers' salaries came into force. The Commissioners urge the establishment of higher grade schools and of advanced departments in ordinary National schools, and instruction in woodwork for senior boys in National schools. The Board have also appointed a committee to consider the relations which should exist between the training colleges and the universities.

SCHOOLS.

CRYPT GRAMMAR SCHOOL, GLOUCESTER.—Dr. J. H. E. Crees, after nine years' service as head master, has left Gloucester to take up the headship of Hereford Cathedral School. During the last nine years the numbers have risen from 140 to 230, and twenty scholarships have been gained at Oxford or Cambridge. There are at present seventeen Old Cryptians in residence at Oxford or Cambridge. In 1916 the school gained representation on the Head Masters' Conference. Two advanced courses, one in classics and one in mathematics and science, have been recognized by the Board of Education.

REVIEWS AND MINOR NOTICES.

PREHISTORIC BRITAIN.

Archaic England. By H. BAYLEY.
(25s. net. Chapman & Hall.)

The author describes this essay of some nine hundred pages as "an application of the jigsaw system to certain archæological problems which under the ordinary detached methods of the specialist have proved insoluble."

"From any quarter whence the required piece unmistakably fulfils the missing space" has he gathered items of fact relating to the history before "history" of these islands, facts of megalithic monument, earthwork, custom, coinage, place-names, and fairy superstition, and has collated these with hosts of similar facts from various parts of the world. There are few more fascinating subjects than the investigation of "monuments," which ante-date the earliest written records of a people; among these the author rightly classes tradition as in most cases proving trustworthy where the "classical" archæologist fails. For all this prehistoric lore there are no "clas-

Register of Teachers.

The Intermediate Education Board have published a Register of the Intermediate School Teachers in Ireland (price 1s.). This is the first list of the teachers who are qualified under the Registration Act of 1914 and registered as possessing the qualifications laid down by the Registration Council. A brief prefatory note explains the constitution of the Registration Council as composed of representatives of the teaching profession, of the Intermediate Education Board, of the Department of Agriculture and Technical Instruc-

sical" rules; the author applies a comparative method of his own which is not afraid to point causal connexions where the "authorities" wave away mere coincidences. There can be no doubt that these islands have been inhabited for half a million years; no doubt that for some hundreds before the arrival of Julius Caesar the population was both numerous and highly civilized. Mr. Bayley makes, for instance, a good case for the originality of British coinage at least as early as 200 B.C.

At first sight fantastic, the linking up of Cretan culture with Iberian, and then with Hibernian and British, incidentally with Troy and Albania, acquires plausibility as one reads the author's carefully accumulated and collated fragments of old-world lore, "line upon line, here a little and there a little." Thousands of British place-names must be older than the earliest historical Celtic tongues, and perhaps the discussion of place-names is the most suggestive feature of the book. In this department of language, as in others, every reader of books knows of strange coincidences of nomenclature among peoples who can never have had any intercourse. The Irish lines in the "Poenulus" of Plautus, which the Roman styles good "Punic of Carthage," are an extraordinary "curiosity of literature." Similar are connexions between the South Sea islands, Egypt, and Central America, apropos of which it is to be borne in mind that the present-day theory of the origins of language is still in the prescientific stage.

Headings of chapters, such as "Albion," "Gog and Magog," "Scouring the White Horse," "English Edens," give an idea of the class of folk-lore dealt with, and the enormous range of "our island story" is only equalled by the uncertainty of much of its meaning. Here Mr. Bayley is an interesting guide, though you will have to take much of his explanation with a grain of "probably" or "possibly."

It may be suggested that the author rather spoils his arguments by quoting so many opinions of writers on folk-lore, many of which are but instances of modern mythology—that is, fanciful explanations of fact; also that tradition, in the mouths of the folk, in spite of wonderful cases of identity in word after centuries, more often than not either suffers detritus or takes new and generally sophisticated forms. Particularly so in place-names; when the real meaning is forgotten there is generally a new and short circuit to an explanation. The well known habit of "savages," when cross-examined by the industrious anthropologist, is to invent *pari passu* with the questions, especially when they have forgotten the true lore of their people. A large proportion of the mythology recorded by observers is of this character.

It is an interesting and suggestive book. It does not prove any theory, except that the specialists who deny Britain any history before the arrival of Caesar are profoundly mistaken; but it hints at a multitude of curious possibilities with regard to that pre-history which, perhaps, can never be set straight.

Possibly an exhaustive criticism of all the Celtic languages and their congeners might assist to some exact inductions.

FRENCH GRAMMARS.—(1) "France" is a French method for English pupils by two well known French teachers of English. It begins with twenty lessons to be done orally; then come reading pieces on French daily life, embracing a useful vocabulary and embodying the chief points of elementary accidence and syntax. At the end are songs and recitation verses, with the first lessons set out in phonetic transcription. A bright, well arranged, but in no way novel book. We doubt whether a French teacher, especially one used to explaining the English language, with its very simple grammar, can ever appreciate the difficulties that confront the English student of French. And if he cannot, he will not discover the order of development best suited to English minds. In this book, reflexive verbs are explained in Lesson 36, and the place of the pronoun-object in Lesson 50. Surely the latter should come first? *La porte, je la ferme, fermez-la; Le garçon, il me regarde, regardez-moi* before *Je me lève, levez-vous*, &c. And unless the difficulty of these pronouns is surmounted, how can answers be given to questions such as *Aimez-vous le français?* (Lesson 22), unless the noun is repeated in the answer, *J'aime le français?* That is an unnatural, deadly practice which should be avoided. The proper development of French for English pupils on direct lines, with sufficient doses of grammar to be learnt, is still to be found. The authors of this book do not, we believe, see the difficulties from an English point of view; probably only an English teacher can do so.

(2) The author of "A Junior French Course—Second Year" has a clearer idea of the road to follow and the points to halt at. His book is the work of a practical teacher, for whom the Direct Method means something more than the use of French in class. He knows how to prepare in advance for his pupils' later development; he takes care that the grammar is explained, learnt, and practised. The questions on the reading pieces are well chosen and graduated; they require longer and longer answers, and so lead on to the composition exercises. The vocabulary contains more than 4,000 useful words, and is carefully prepared. The whole book is a thorough piece of work and, well studied, should ensure a sound foundation in the language.

(3) Longmans' "Modern French Course—Part III" consists of reading pieces, with *questionnaire* and passages for repetition, pages 1-94, followed by a grammar section in English, pages 95-157, and exercises, chiefly translation into French, on the grammar. The reading pieces are well selected, and provide good practice for the more advanced pupils; but one hardly understands how these pupils can need such elementary grammar as the possessive adjectives and pronouns, the use of the partitive article, &c. No doubt the book will be useful in classes where the teachers do not employ wholly modern methods; whether it will accomplish its aim of teaching to speak, read, and write French is more doubtful.

(4) "Continuation School French" hopes to provide material for those older students of the language who can have only one or two lessons a week. Whether the subject-matter, with its story of the life and adventures of two French families—how many such families have been introduced to English pupils?—will prove of interest to such students, is uncertain. We believe that more heroic methods should be employed for these older pupils: the elementary grammar should be explained more briefly and in longer sections, vocabulary learnt by heart, harder reading tackled sooner. Continuation pupils should be ready for and capable of greater efforts than school children.

(5) "Le Français rendu plus facile" will not make French easier by using irregular verbs (*faire*, page 7; *mettre*, page 8; *s'appeler*, page 11, &c.) before they have been explained. Nor can such explanations as "You translate the pupil's book as if you had the book of the pupil" be regarded as modern and enlightening. The past definite in Lesson 6, and the more useful past indefinite in Lesson 12, the plural of such compound nouns as *réveille-matin* in Lesson 9, the pronouns-object reserved till Lesson 24 and then inadequately treated, the use of interrogative adjectives and pronouns without comment in the earlier lessons—these and other similar points strike us as doubtful strategy in the battle with a foreign idiom.

SELECTED PIECES AND TEXTS.—To those teachers who require a volume of selected passages from French authors for testing the knowledge of their pupils or for preparing them for examination, we can recommend (6) the two volumes prepared by Prof. L. E. Kastner. The excerpts are well chosen and comprise many examples of contemporary authors whose works are still copyright. Indeed, from this point of view the two volumes are probably

unique. They are interesting, too, as literature, and the notes, though brief, elucidate all difficulties.

Of the three texts lately added to Siepmann's "Rapid Reading French Series" (7) none is particularly interesting. There are so many works which young students should know before giving their time, even for rapid reading, to Gabriel Ferry's stories of Mexican life, picturesque though they be, and "Le Bal de Sceaux" is hardly one of the best of Balzac's short stories, though the romantic Emilie de Fontaine, bent on marrying a peer of France, and disappointed at discovering her hero at work in a draper's shop, may interest girls at a boarding school. (8) "Contes pour les Commencants" tells of yet another French family, and the adventures of Paul, Marie, and Marguerite at home, in the country, and at the seaside. The matter is suitable for young children; the constructions are, on the whole, simple; the vocabulary is rather extensive, but the words employed are useful for beginners.

The volumes in (9) Harrap's Bilingual Series will prove of great assistance to adult students of foreign languages. After having acquired a summary knowledge of the grammar, there is nothing better for them than the study of modern texts. Here we have an interesting story with an almost literal translation on the opposite page; the trouble of turning up words in the dictionary can be avoided, a page or two can be studied till the vocabulary is known and then re-read without help. The little books are handy for the pocket and the price is moderate.

The Manchester University Press has added (10) "Aucassin et Nicolette" to its mediæval section of Modern Language Texts. We congratulate the editor on a scholarly edition embodying some features that are quite new. Notes, bibliography, and glossary are excellent, and the whole production is worthy of this series, which appears under the direction of Prof. L. E. Kastner.

We can congratulate, too, Messrs. Hachette on (11) their three little manuals of the history, geography, and art of France. M. Isaac's history gathers together the great Gallic names from Vercingetorix to Clemenceau, and the principal events from Caesar's conquest to the breaking of the Hindenburg line. It would be difficult to find a better guide through 2000 years of history than M. Isaac; he picks out the leading lines of development with certainty and has that wide knowledge which knows what events may safely be disregarded. The volumes are profusely illustrated.

CLASSICS.

Practical Hints on the Teaching of Latin. By L. W. P. LEWIS. (5s. net. Macmillan.)

Mr. Lewis has done a good service in printing the four lectures which he delivered at Ilkley at the Board of Education's Latin Courses for Teachers in August, 1918. It is a serious defect, either of our national reserve, or of our methods of instruction, that teachers know little of one another's ways of attacking their subject. Every good teacher, no doubt, has special ways of his own which another cannot adopt without risk, but he must also have a method which is deserving of serious study. We do not propose to criticize Mr. Lewis's methods, which have justified themselves by twenty years' success at Bradford Grammar School. We only advise all teachers of Latin to read his four lectures, and shall be surprised if they do not learn a great deal. A special interest attaches to them, as he does not believe in the "direct method," and is in fact opposed to it. It would, however, have added to the clearness of the book if Mr. Lewis had given a short syllabus of the work of each of the four years' course, the ground covered—accidence and syntax, the books used, and the amount done each term or year.

The Clouds of Aristophanes. Translated into corresponding metres in English. By B. B. ROGERS. (Paper, 2s. net; cloth, 3s. 6d. net. Bell.)

Messrs. Bell are publishing in separate form each of Dr. Rogers's well known translations of Aristophanes' plays, and the English public should welcome the opportunity of buying them thus in convenient form and at a low price. They have long established themselves as English classics. They are better than Frere and more complete, and were personally revised by Dr. Rogers himself just before his death. The "Clouds," the first volume to be issued, was published first so long ago as 1852, having been written when the translator was an Oxford undergraduate. This edition is completed for English readers with an introduction and short explanatory notes. When all the plays have been published separately, Messrs. Bell, we suggest, should publish them all together complete in one or two volumes.

The Ajax of Sophocles. Translated by R. C. TREVELYAN. (2s. net. Allen & Unwin.)

Mr. Trevelyan gives us a translation of the "Ajax" in English iambic verse, except in the choric parts where his aim has been to

reproduce as closely as possible the metrical pattern and phrasing of the original, so that, as he explains, one musical setting would fit both the Greek and the English words. The translation, as a rendering of the Greek, is faithful and accurate; it is also terse, refined, and elevated. But Mr. Trevelyan has not a perfect feeling for rhythm. Take as specimens of English iambs the two following lines:—

"O'ermastering notions of that baneful ecstasy."

"Thou Odysseus, champion him thus against me."

To translate choruses into the same metre in English is a *tour de force*. Mr. Trevelyan may be congratulated on his success in doing it, but when all is said the result is not English poetry. We have noticed very few inaccuracies.

Album Latinum. An Easy Latin Vocabulary for Preparatory Schools and the Lower Forms of Public Schools. Compiled by A. G. ROPER. (1s. 6d. net. Blackwell.)

This vocabulary consists of three sections of ten lessons, each of ten easy words. It is to supply a need for boys in the earlier stages of translation and unseen work. At the end of a year a boy will have learnt 300 useful words. Unfortunately the idea underlying this vocabulary has not been clearly thought out. At what stage is a boy to use it? In what year of doing Latin? He is told that *tuba* is in the first declension, but nothing about *funda*, the next word to it (page 8); also *munio* is fourth conjugation, but nothing about *pono* just before (page 10). On page 7 we have *expediti*, *levis armatura* side by side, meaning "light armed." Page 16, the neuter plural of *anceps* is *ancipitia*. Page 13, is *terga verito* good Latin? Declensions, genders, principal parts are given on no definite plan, and quantities are omitted, except very occasionally. Incorrect spelling, e.g. *caespes*, is given side by side with the correct, *cespes*.

EDUCATION.

Engineering Education: Essays for English. Selected and edited by Prof. R. P. BAKER. (6s. net. Chapman & Hall.)

The compiler of this book is the Professor of English in the Rensselaer Polytechnic Institute, and is to be congratulated on having brought together so many inspiring articles and addresses by leading men of science and technology. These essays have been arranged under the headings of (1) The Origins of Engineering Education, (2) The Types of Engineering Education, (3) The Bases of Engineering Education. Under heading (1) we find Simon Newcomb's address on the evolution of the scientific investigator, and Sir J. J. Thomson's address on the relation of pure science to engineering. Under heading (2) there is John Butler Johnson's discussion of the two classes of competency to serve and competency to appreciate and enjoy, and also a discussion on the classical-scientific *versus* the purely technical university course, by Howard McClenahan. Heading (3) is divided into subsections of language, mathematics, physics, chemistry, and imagination, and includes, among others, "The Place of Mathematics in Engineering Practice," by Sir W. H. White, and another article on the same subject by Arthur Ranum. Despite the fact that English does not form part of the engineering curricula at any of our British colleges, the book can be thoroughly recommended to all students of engineering, and cannot fail to have a stimulating effect. Engineering courses, from the nature of the work which must be included, are apt sometimes to have the effect of limiting the horizon of students, and an occasional dip into books such as the one before us will have the effect of both widening the view and having a wholesome influence on the imagination.

A Short History of Education. By Prof. J. W. ADAMSON. (12s. 6d. net. Cambridge University Press.)

Giving just the amount of attention to the world-history of education that is necessary to supply a scholarly foundation for what follows, Prof. Adamson gives us here an excellent historical account of English education. His well known researches into the actual conditions under which classroom instruction was carried on in past centuries are here set out with his accustomed clearness and precision. The book, indeed, fills a gap among the existing histories. Quick, Leach, and Monroe have each done first-rate work (we are sure that Prof. Adamson means no harm by his "inspiring" gibe in the preface), and this book supplies a new presentation that cannot but appeal to the practical English mind. Avoiding Monroe's tendency towards the doctrinaire, and Leach's bias towards the merely administrative, Prof. Adamson strikes out a line of his own. Inquiring educational investigators from America and elsewhere are continually troubling our experts for a trustworthy conspectus of English education. This short history (not so very short, by the way, with its 354 large pages of close type) will abundantly supply what is needed, and the readers will be all the better for the philosophical background thrown in. An admirable treatise.

"English Public Health Series."—*The Welfare of the School Child*. By Dr. J. CATES. (5s. net. Cassell.)

This book is obviously written from the point of view of the school medical officer, whose rights and responsibilities are set forth with much emphasis. But the professional teacher will find valuable information within its boards, particularly in connexion with school buildings and their use. The reader who remembers what he learnt in hygiene textbooks a score of years ago will find that the world has not stood still in the interval, and will be grateful to Dr. Cates for many important hints. The treatment of the mentally abnormal child leaves a good deal to be desired in the way of classification. Pages 106 and 125 do not seem to be quite consistent in the matter of playground accommodation. But these are merely the exceptions that prove the rule of accuracy that marks the book. It has the great merit of answering just those questions of number and quantity that the teacher is so fond of asking. Those of us who have to carry on our work under bad physical conditions will find this an excellent volume to bring to the notice of our governing bodies. The first part of the book the teacher will read for information; the second he will pass on to those who are responsible for what Dr. Cates condemns.

The Curriculum. By KENNETH RICHMOND. (5s. net. Constable.)

Readers of Mr. Kenneth Richmond's previous volumes (including his share of "W. E. Ford") will be prepared for a suggestive treatment of the ever discussed—and, from the nature of the case, never settled—problem of the curriculum. The author, beginning with the least and proceeding to the most nebulous portions of his theme, deals with the principles which should underlie the curricula of secondary, elementary, and continuation schools respectively. His main guiding principle is that "the cult of 'subjects' in education is really out of date. There is only one subject—knowledge; and only one object—free and active development. Wholeness is what we lack, and wholeness is synonymous with health." The book is an attempt to show how far the application of this principle would mean throwing the established curriculum into the melting pot.

The Powers and Duties of Education Authorities. By H. FLETCHER MOULTON. (15s. Hodge.)

Each of the great Education Acts has brought in its train a number of appropriate handbooks—generally compiled by legal experts—for the use of officials, school managers, members of local authorities, teachers, and others interested in the working of the Act, and in the possible effects of the new legislation upon the life of the community. In the case of the Act of 1918, it must be years before those effects are fully manifest. Meanwhile it is convenient to have the law stated as it will be when the Act is in full force, and this is the task which Mr. Moulton has set himself in the present volume. The earlier chapters deal with the powers and duties of the various authorities, the middle with the provisions relating to the several grades of education, and the later chapters with religious instruction, medical inspection, teachers' pensions, employment of children, finance, &c. An extensive appendix contains the Education Acts in full as they stand to-day. The essential virtues of such a book are accuracy in detail, lucidity of arrangement, and ease of reference; and on these points it has answered extremely well to the tests we have applied. The book appears to us to fulfil its purpose admirably.

The Girls' School Year Book, 1919-20. (7s. 6d. net. Deane: Year Book Press.)

It may be at once admitted that the editor of this excellent work of reference has succeeded in his object, which was to provide a record of all matters of interest to parents, schoolmistresses, and girls in connexion with secondary education. The information is accurate and up-to-date and arranged in such a way as to make reference easy.

GEOGRAPHY.

"*The Times*" *Survey Atlas of the World*. Prepared under the direction of Dr. J. G. BARTHOLOMEW. Part I. (2s. 6d. net. The Times.)

In this atlas it is intended to present, in thirty-seven fortnightly parts, a comprehensive series of maps reduced from the national surveys of the world and the special surveys of travellers and explorers together with the territorial redistributions decided upon at the Peace Conference. There will also be added a gazetteer comprising more than two hundred thousand names. The name of Dr. Bartholomew as the cartographer is a guarantee of the excellence of the draughtsmanship. Part I contains four maps (each 21 by 16 inches) viz., the Southern Section of Scotland, Farther India, Lower Egypt, Mexico, and Central America. On all these maps, the names are clearly printed and the bathy-orographical features are shown by means of an effective scheme of

colouring. Although folded, the sheets open flat and they are mounted in such a way that they can be fastened together by the loose-leaf binding system; consequently additional or revised sheets can be inserted at any time in their proper places. When completed the survey atlas will be a most valuable work of reference to the general reader and to students in colleges and schools. Many of the sectional maps (e.g. the seven sheets of the British Isles) would, when fitted together, provide a most useful map for teaching purposes.

"Cambridge County Geographies."—*The North Riding of Yorkshire*. By Captain W. J. WESTON. (2s. net. Cambridge University Press.)

This book is one of the Cambridge County Geographies, and it conforms to the general plan of that series. The text deals with a most interesting part of Yorkshire, including the bold coast line from the mouth of the Tees to Filey, the North York Moors, the plain of Northallerton, and the Pennine moorland. In the twenty lessons into which the book is divided, the physical geography, the industries of the people, and the history of the district are all carefully described. The book is well illustrated, and it contains two maps of the North Riding—one showing physical, the other geological, features.

HISTORY.

"American Historical Series."—*The Expansion of Europe: a History of the Foundations of the Modern World*. In 2 vols. By Prof. W. C. ABBOTT. (30s. net the two vols. Bell.)

To say that these two volumes belong to the American Historical Series, edited by Prof. C. H. Haskins of Harvard University, is itself a guarantee of their excellence. It is a series in which half-a-dozen notable works have already appeared, the last of which is Prof. Carl Russell Fish's remarkable study of American Diplomacy. The volumes before us well maintain the reputation of the series. Their author, a professor in Yale University, writes as an expert, and writes with a vigour and a literary skill that are by no means common among eminent historians of the scientific school. Prof. Abbott traces the development of Europe from the Renaissance to the French Revolution. He projects a third volume, he tells us in his preface, to carry the story down to the present time. His aim, he distinctly informs us, is to show "how things became to be as they are"—that is to say, his interests lie in the present, and he studies and writes about the past mainly in order that he may understand the existing world and make it intelligible to others. Keeping this end in view, he omits masses of merely antiquarian detail, and thus finds room to describe in considerable fullness the movements that have moulded modern man. As the interests and the problems of the present are by no means confined to politics, so Prof. Abbott's narrative includes many non-political aspects of European life. It aims at co-ordinating social, economic, and intellectual development with political advance and it includes both East Europe and Overseas Dominions in its scheme. It is a luminous and penetrating study, invaluable for the sidelights which it throws on the military and diplomatic annals of the ordinary textbook. Good maps and a careful selection of useful illustrations complete the paraphernalia of what must be described as a noteworthy and important manual.

"Great Nations Series."—*Italy from Dante to Tasso (1300-1600)*. By H. B. COTTERILL. (15s. net. Harrap.)

Some years ago Mr. H. B. Cotterill, a writer of great linguistic accomplishment and literary ability, published a notable history of medieval Italy, covering the thousand years from Diocletian to Henry of Luxemburg (A.D. 300-1300). He now presents us with the sequel to this work—viz., a history of Italy during the three crowded centuries of the Renaissance. The difficulties of his task will not be underestimated by any reader who has grappled with such a task as the introductory volume of Symonds's "Renaissance in Italy" or Ranke's "Latin and Teutonic Nations." Italy was not a political unit during the Middle Ages and the early centuries of the modern period. It was a congeries of small States, whose fluctuations of external frontier and internal constitution were bewildering in their rapidity and complexity. To obtain any sort of a conspectus of their progress is as hard a piece of work as it is to get a general notion of the movements of a couple of hundred eels in an aquarium. Mr. Cotterill has solved the problem of multiplicity by wisely concentrating his attention in the sphere of politics upon the five greater States of Rome, Naples, Milan, Florence, and Venice. These were, indeed, the major luminaries, to which the remainder were but satellites. Normally, Rome and Venice were allies against Milan and Naples, with Florence holding the balance, but departures from the normal were numerous and curious. The story of the Italian politics of the Renaissance is indeed one of fascinating intricacy. It is an anticipation on a small scale of the European diplomacy of the later centuries. Mr. Cotterill, how-

A. & C. BLACK'S LIST

PICTURE LESSONS IN ENGLISH

Each containing 14 full-page Illustrations in Colour, Questions, and Notes. Price 1s. each.

Book I. Book II. Book III. Book IV.

Long experience in teaching composition to young children has convinced the author that no plan of approaching the subject is better than that of using pictures, which assist the pupil in the work of self-interrogation, and at the same time cultivate the habit of observation.

A FIRST COURSE OF ESSAY WRITING

By J. H. FOWLER, M.A.

Price 8d.

The aim of this little book is to reduce the number of those unpleasant and often unprofitable minutes which a beginner spends in contemplation of the "theme" that has been given him—minutes during which his mind is as blank as the white sheet of paper he is expected to fill.

COMPOSITION FOR JUNIOR FORMS

By GEORGE H. GREEN, L.C.P.

Containing 15 full-page Illustrations, of which 3 are in Colour.

Price 1s. 8d.

This book provides material which is likely to promote a love of self-expression by means of prose-writing on the part of pupils ranging from ten to fourteen years of age. The exercises are numerous, and of an interesting and suggestive character. The book deals with composition only.

Selected by Mrs. P. A. BARNETT.

SONG AND STORY SELECTIONS OF VERSE.

Price 6d. each.

3 ADAM ST., ADELPHI, LONDON, W.O. 2.

ever, does not limit himself to politics. His most interesting chapters, on the contrary, deal with literature and art. His book is well illustrated from contemporary sources, and it is produced in attractive style by Messrs. Harrap, whose reputation as publishers of art books is deservedly high.

MATHEMATICS.

Mensuration for Marine and Mechanical Engineers. (Second and First Class Board of Trade Examinations.) By J. W. ANGLES. (5s. net. Longmans.)

Mr. Angles designed his book to be of service to marine engineers in preparation for the Board of Trade examinations. The character of the work required for this purpose is elementary, and the treatment in the text is simple and likely to be grasped easily by the student. There are numerous examples worked out in a good systematic style, and many collections of further exercises to be attempted by the student. An appendix contains some proofs requiring the use of the calculus. In view of the care which has obviously been expended elsewhere in the book, it is unfortunate that the tables of logarithms are arranged so that the whole table is not visible at one opening of the book. The same remark applies to the table of antilogarithms. The book should be of service to those for whom it is intended, but the general reader may be annoyed occasionally by the presence of a heavy arrow calling attention to various formulae. Further, exercises are marked here and there first or second, indicating that recent questions of this type have been set at the Board of Trade. This is apt to give the reader a wrong impression of the book, an impression which will probably disappear as he becomes more acquainted with its excellent contents.

MISCELLANEOUS.

The Publishing Family of Rivington. By S. RIVINGTON. (10s. net. Rivingtons.)

Mr. Septimus Rivington provides us in this volume with a second enlarged edition of his book "The Publishing House of Rivington," published in 1894. We are now in possession of all that is known of this eminent publishing family, and to read of a business existence of 229 years is to come across the names of many great literary men with whom the firm had intimate relations. It is possible to refer only to a few of the many great works issued from this house, among which are Pope's translations of the *Iliad* and *Odyssey*, Richardson's "Pamela," Smollett's "History of England," some of Gay's and Matthew Prior's works, as well as some of Steele's and Addison's editions. For the facts in connexion with the publication of such educational books as Hamblin Smith's mathematical works, Arnold's "Latin Prose Composition," and many others, the reader must be referred to the interesting volume itself.

Letters to a Young Man on Love and Health. By W. M. GALLICHAN. (4s. 6d. net. Werner Laurie.)

Mr. Gallichan has made a special study of the relations of the sexes in the modern civilized state, and his writings on marriage, sex education, and the problem of the unmarried, are probably known to many of our readers. The present volume, containing a series of letters supposed to be addressed to a young man, are marked by just that combination of candour and restraint, seriousness and sympathy, knowledge and simplicity, which are proper to the occasion. There is one feature of the book, however, of which we do not feel sure. In the first letter the "young man" is supposed to be sixteen years of age, and in the last he is on the eve of marriage. Actual letters written to an individual at successive periods between these ages are one thing, but the appearance of the whole in one book at one time is another thing. The later letters are not suitable for boys of sixteen or seventeen; but the whole book is very valuable for young men, fathers, and teachers of boys.

Memories of George Meredith, O.M. By Lady BUTCHER. (5s. net. Constable.)

Lovers of Meredith's works will welcome these very interesting memories. They are the outcome of forty-one years' friendship with the novelist, ranked by competent critics "unhesitatingly among the giants." The contemporaneous record of Meredith's sayings, which Lady Butcher provides from notes made in her diaries, enables disciples of the master to realize something not only of his virility but of his sympathetic winsomeness. As pictured here Meredith was evidently a good friend, a delightful neighbour, and an understanding confidant.

Why We Do It: Psychological Gossip. By R. MACMILLAN. (6s. net. Laurie.)

In his own words, the author of this book is "an ignorant man with an inquiring mind" whose "natural tendency is to flippancy." He "started out with the idea of being very brief, and also of never being tiresome." He might have been much briefer

if he had repeated himself less, and if he had refrained from continually directing attention to the way he does things. On the other hand, though he is frequently irritating he is seldom tiresome, the interest he arouses being largely of the kind that makes *Tit Bits* popular. He deplores his lack of academic education, but it is evident that he has had the education that comes from long and very diversified experience. The thesis he maintains is that we are all automatons, and that almost none of us ever thinks. He has read widely but not exactly, and his text is not what one would expect from an editor accustomed to use the blue pencil and to keep proof readers up to the mark.

SCIENCE.

The Mind of a Woman. By Dr. A. T. SCHOFIELD. (3s. net. Methuen.)

In spite of the example of Benjamin Kidd, this book should have been entitled "The Mind of Woman." Its author has no particular woman in mind, and writes generally. The book is literary rather than scientific. Indeed, at one point, the author appears to rely upon what is little better than a verbal quibble. "If a woman's mind is not creative nor inventive it is because she has to create the next generation. If women cannot do much in architecture, nevertheless they are the architects of humanity." The book is adorned throughout with gems from English literature, but on the essential points it leaves us practically where we were. Dr. Schofield is full of admiration for women, and would praise them even more than he does were it not for the fact that Benjamin Kidd has been in the field before him and damaged the cause by overpraise. The best parts of the book are those that deal with the strictly biological aspect, but here it would be well if Dr. Schofield would give us more critical guidance. Does he, for example, accept Starkweather's law, or does he use it merely for rhetorical purposes? The book is written in an excellent spirit, is eminently fair, and will be read with great interest by women.

Examples in Heat and Heat Engines. By T. PEEL. (5s. net. Cambridge University Press.)

We have here a large number of questions set in connexion with the engineering lectures at Cambridge, and others taken from the Engineering Tripos. They are arranged in short papers increasing in difficulty, and no questions dealing with the dynamics of heat engines have been included. No hints are given for the methods of solution, but answers to all questions will be found at the end of the book. In this, as in all engineering subjects, the working of exercises by the student is essential, and the collection given in the book will be found to be of service. It is impossible to refer to all the subjects on which the questions are based, but we note some good exercises on expansion and compression of gases and vapours, and there is a number in which trial data have been given in full for boilers, pumps, reciprocating steam engines, turbines, and internal combustion engines. These data will be of special service to teachers as matter supplementary to data accumulated from trials in their own laboratories.

PRIMARY SCHOOL NOTES.

The Raising of the School Age.

THE ratification of the Peace and the definite statement of the President of the Board of Education that the existing half-time system is to be abolished this year, point to the early introduction of Clause 8, Sub-section i, of the new Education Act. The long postponement of this vital clause has made cruel inroads upon child-life in the industrial North, where the cupidity of parents has caused them to throw their children into the factories in the spirit of the gambler's last chance. It is therefore of the utmost importance that this clause should come into operation without further notice; otherwise the lure of the last chance will cause the mental and physical degradation of many thousands of the nation's children. The fact is often overlooked that the half-time system will persist for two years after Clause 8, Sub-section i, has been introduced, since half-timers of the age of twelve upon the appointed day will have to remain in school attendance until the age of fourteen years; in the full sense, therefore, the half-time system cannot be abolished this year.

The Staffing Problem.

It is already clear that the introduction of the National Minimum Scale of Salaries for teachers and its endorsement by the National Union of Teachers, are not to be decisive factors either

in the settlement of salary questions or the adequate recruitment of the teaching profession. The lot of existing teachers in the rural, semi-rural, and other areas which are educationally backward, will doubtless be considerably improved; but there are signs that men in the training colleges do not intend to enter the schools so long as the commencing and terminal salaries are so modest as those set forth in the national scheme. If they come in at all, it will most likely be in the secondary and continuation branches of education, where the immediate prospects are brighter. The more ambitious members of the primary school staffs are already preparing actively for work in the new central and continuation schools, so that the staffing problem in the primary schools is rapidly increasing in gravity. The new scales in course of formation throughout the country are being awaited with considerable anxiety. If they are generous, the staff-leakages will probably be stayed; if not, there is every prospect of a vigorous movement to schools and districts where tolerable conditions of service obtain.

The Influence of Labour.

THE growing power of Labour in local councils is being reflected, in the administration of local education committees, by the greater interest which is being taken in the task of reconstruction outlined in the Education Act. In some cases where sections of teachers have become affiliated with the local Labour organizations, definite attempts have been made to improve the salaries of teachers, and with such success that the tendency of local associations to identify themselves with the Labour Party is becoming pronounced in districts where the conditions of service are not equitable. The movement to improve salaries, and the introduction of joint committees of teachers to share in the work of administration will help to counteract this tendency. There is a general disinclination among teachers to seek political alliances; they have to educate children whose parents are of all types of political belief; and on this account they are as eager to work with one political party as another in the field of child-welfare. Upon this common ground labour members of education committees often show a practical sympathy which makes a direct appeal to teachers. The labour member who visits a school is often a parent or worker among young people; he is anxious to help the routine of school life by speeding up requisitions for furniture and apparatus, by attention

to sanitary arrangements, and the comfort of pupils and teachers. He is usually keen to ascertain the teacher's point of view, and, having found it, is prompt to appreciate the sound features of a scheme of school work.

N.U.T. Notes.

THE selection of Margate as the final choice for the annual conference of the Union marks the continuation of the policy of holding the Easter meeting in widely divided parts of the country. The endorsement by the Union of the Provisional Minimum Scale records an important advance to the attainment of the Union Scale, and it may be anticipated that the resources of the Union will be devoted with increasing intensity to this end. Until this object is secured, the real co-operation of teachers in bringing recruits to the profession cannot be obtained. The resolutions from the local associations show much uneasiness at the prolonged delay in bringing the Education Act into force, and there is criticism of some of the methods of training teachers for the new schools for older students. There are unmistakable signs from all quarters that teachers are anxious to proceed at once with the business of the new Act. At the last meeting of the Executive a subscription of one hundred guineas was voted in aid of starving Austrian teachers.

ROYAL SOCIETY OF ARTS.—The total number of entries for the society's examinations in 1919 was 31,132, as compared with 28,879 in 1918 and 24,221 in 1917. The increase in the number of entries in English, which in 1918 was considerably higher than in any previous year, was maintained, the figures being 1,169, as compared with 1,074. Book-keeping has for many years been the most popular subject. In 1918 the entries numbered 8,023; in 1919 they were 9,151. There was a slight falling off in the small number taking Economic Geography. Economic History attracted very few candidates. The entries in Italian were disappointing, showing a decrease from 80 in 1918 to 47 in 1919. The popularity of Spanish is growing, the entries in all stages being 386, as compared with 289 last year. In 1917 there was a distinct boom in Russian, when 266 candidates entered in all stages, but in 1919 the number fell to 79. The examinations in the Rudiments of Music and Harmony were held in 1919 for the last time.

advertiser. Post Cards will NOT be
sent on.

PRIZE COMPETITIONS.

THE winner of the December competition is Mr. H. Cradock-Watson, Merchant Taylors School, Crosby, Liverpool.

The Prize for the January competition is awarded to "Nil Desperandum," but we have decided that the essay is scarcely distinctive enough to print.

The essays, on the whole, were fluent, but did not reach a high standard of composition, style, or language. A number of Anglicisms occurred in all the essays: e.g. *misère* for "misery," *penser de* = *penser à*, service for "church service," *Mons.* = "Monsieur" (Mons is the name of a Belgian town, now well known, and is never used as an abbreviation for "Monsieur" except by English people), and there were also bad grammatical mistakes, like "de que," in a few.

The subject-matter of most of the essays was interesting, but there was little sense of form; a French essay must have "form" to be an essay at all. The papers, however, showed sufficient fluency and range of vocabulary for the writers to have every prospect of success after further study of the "art of writing."

The 14 versions received are classified as follows:—

Class I.—Nil Desperandum, En Exil, W.W.M., H.B.S.

Class II.—Bladud, Chymyny, Heering, X rouge français.

Class III.—Bésigue, J.M.N., J.H.S., Umbria.

Class IV.—Eléphant marin, Fifi.

A Prize of Two Guineas is offered for the best translation of the following extract from the chapter on "Ruy Blas" in Paul de Saint-Victor's "Victor Hugo":—

DON CÉSAR DE BAZAN.

L'Espagne est le pays des extrêmes. Vis-à-vis de l'égoïsme endurci de Salluste, le poète a placé la générosité débraillée de César, l'insouciance folle, en face de l'*atra cura*. C'est un monde que cette mirifique création. Tous les gueux, tous les gitanes, tous les aventuriers des Castilles se sont incarnés dans ce chevalier de

joyeuse figure. Rassemblez, en une diète fantastique, l'immense peuplade des bohèmes de la poésie: César en sera proclamé le roi légitime. Que de jactance et que de folie! Que de grandesse sous sa misère! Dans ses incartades les plus divagantes, je crois voir Don Quichotte exécutant des cabrioles sur la Roche-Pauvre. Sa gaieté est inextinguible; sa moquerie lance des rayons, son ironie a des ailes, les jeux de lumière de sa fantaisie feraient pâlir celle du Mercutio de Shakespeare. Comme l'habit de Buckingham, la cape en dents de scie de ce zingaro sème une pluie de perles.

Jamais figure plus pittoresque ne s'est produite sur la scène. Chaque mot le campe, chaque geste le dessine sous une attitude imprévue. C'est une succession de silhouettes folles et charmantes. La vie comique qu'il porte en lui est si féconde et si pleine, qu'elle se projette, au dehors, en mille figures capricieuses. Il reste presque seul, dans le merveilleux intermède du quatrième acte, et voilà qu'à sa voix la scène se peuple, comme un laboratoire du sorcier, d'images bouffonnes et d'apparitions drôlatiques. Le cabaret chante, la posada grouille, les alguazils rôdent; les clercs et les écoliers vont, le nez au vent, flairant les aubaines; Lucinda passe sa tignasse de maritorne ébouriffée à travers la lucarne de son taudis; Goulatromba, le feutre aux sourcils et la rapière à l'échine, surgit, devant la porte d'un bouge, accolant une outre, comme le buveur qu'a peint Vélasquez. . . . Toute l'Espagne picaresque se déroule, dans ce merveilleux poème en action. D'un pan il va s'accrocher à l'Orient; des "femmes jaunes et bleues" s'y dessinent; des minarets et des pals pointent à l'horizon.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on February 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

Messrs. GABBITAS, THRING & Co. have also on their Books Vacancies for Matrons, Student Mistresses, Private Governesses, and Foreign Mistresses.

Candidates desiring to apply for any of the above or other suitable vacancies should write fully to MESSRS. GABBITAS & THRING, stating their age, qualifications and experience, and enclosing copies of their Testimonials.

A Prospectus will be forwarded gratis on application. NO CHARGE FOR REGISTRATION, and no Fee of any kind is due unless an Appointment be obtained through the Agency.

SCHOOL TRANSFERS AND PARTNERSHIPS.

MESSRS. GABBITAS, THRING & CO. have a large number of BOYS' and GIRLS' SCHOOLS on the books in their Transfer Department. On learning a Purchaser's qualifications and requirements, they will send notices of opportunities likely to prove suitable, without making any charge to Purchasers.

TO ASSISTANT MASTERS ASSISTANT MISTRESSES LADY MATRONS

§ Candidates seeking appointments in Public or Private Secondary and Preparatory Schools at home or abroad should apply to

Truman & Knightley —SCHOLASTIC AGENTS—LTD—

who have a large number of EASTER vacancies on their books, and who are already receiving instructions respecting vacancies for SEPTEMBER.

§ There is a great demand for both Assistant Masters and Assistant Mistresses, and serious efforts are being made to render the prospects in the teaching profession more attractive and equal to those in other professions.

§ In addition to the large number of appointments open to University men and women in Public Schools, where the remuneration is being fixed on improved scales, there are many vacancies in Preparatory Schools where young University men without previous experience can command commencing salaries ranging from £120 to £200 a year or more, according to their degree, in addition to board and residence in term time.

§ There are many openings for University women and also for those with Higher Local or other good certificates, interested in children and in teaching, in high-class private schools for girls, where the conditions are pleasant and the hours not excessive, with salaries ranging from £80 to £200 or more, with board and residence, according to age, qualifications, and experience.

§ There are also vacancies for House Mistresses, Lady Housekeepers, and Matrons in schools at salaries ranging from £60 to £100 or more per annum with board and residence.

§ **There is no charge for registration.** The requirements of each applicant receive careful consideration and attention, and the rate of commission charged to those for whom an appointment is secured has recently been reduced.

Truman & Knightley

SCHOLASTIC AGENTS LTD

SCHOOL TRANSFER DEPARTMENT.

Ladies and gentlemen seeking partnerships in or to take over schools of their own should communicate personally with **Mr. TRUMAN**, who has had a large experience in the conduct of negotiations connected with the transfer of schools, and who is in a position to offer sound advice and assistance to purchasers, to whom no charge is made. He regards an efficient private school as a remunerative investment at the present time.

Messrs. TRUMAN & KNIGHTLEY beg to call attention to the following openings in **Girls' Schools** which they have been called upon to negotiate:—

- SCOTLAND.**—Old-established Day School for girls; average gross income £3,200, net income £1,050; excellent premises. £4,000 required for freehold premises, goodwill, furniture, &c., half of which could be paid off by instalments.—T 3099.
- N.W. COAST.**—High-class Boarding and Day School; 41 boarders paying 75 guineas per annum, and about 50 day boarders and day pupils. Excellent premises in own grounds; rent £385. Gross receipts over £4,000, net profit about £800. Capitation fee on pupils transferred; furniture at valuation. Very reasonable financial arrangements made with the right successor or successors.—T 2241.
- SOUTH COAST.**—Partner required for a large and successful high-class boarding School with splendid premises and grounds specially built for their purpose. The School is quite full with 80 boarders paying from £100 to £120 per annum, exclusive of extras. Gross receipts over £7,000 a year, producing a large net income. Partner required who could put down from £1,000 to £1,500. The remaining partner will continue to run the educational side, as at present, or pass it on to her partner, but the latter should be in a position to undertake the accounts, &c. First-rate investment for capable woman of good qualifications and experience.—T 2,378.
- SOUTH COAST.**—Partner required with degree or equivalent qualifications to manage the educational side of a large and successful Boarding and Day School for girls. Gross receipts nearly £4,000 a year; net profits about £800. £1,000 required for half share of goodwill, furniture and equipment, part of which could be paid off by instalments.—T 2,097.
- SOUTH COAST.**—Preparatory school for girls and little boys, containing 10 boarders paying from 75 to 90 guineas per annum, and 22 day pupils. Term's fees accepted for goodwill; furniture at valuation.—T 3,071.
- LANCASHIRE.**—Private High School for girls with Kindergarten and Preparatory Class for boys, containing about 90 day pupils, producing nearly £1,000 a year. £300 asked for goodwill and school furniture, or offer.—T 2,968.
- HOME COUNTIES.**—Preparatory School for boys and girls, containing 12 boarders paying from £75 to £90 per annum, and 40 days pupils paying from 7½ to 21 guineas per annum, exclusive of extras. Gross receipts about £1,500. Excellent premises in 6 acres. Goodwill £500, furniture at valuation.—T 2,504.
- SURREY.**—Principal moving away with her boarders wishes to dispose of her connexion of 30 to 40 day girls paying 18 to 36 guineas per annum. Gross receipts from day pupils between £1,200 and £1,500. Rent of premises, with accommodation for about 30 boarders, £300. One term's fees accepted for goodwill. Would be willing to receive vice-principal with a view to succession, if desired.—T 3,086.
- LONDON.**—Day School of the highest class containing 80 to 100 pupils; gross receipts over £3,000, net profit over £1,000 per annum. Goodwill £2,000, furniture at valuation; part of the purchase money could be paid off by instalments.—T 3,072.
- SOUTH COAST.**—Head Mistress required for High-class Boarding School being taken over by a private company; 60 boarders at fees of £100 to £120 per annum; first-rate premises specially built for their purpose in 5 acres of grounds. The Head Mistress's remuneration would be partly fixed, and depend partly on profits. Candidates should be able to invest at least £500 in shares, which should pay a dividend from 10 to 15 per cent.—T 3,508.
- WEST OF ENGLAND.**—High-class Boarding and Day School containing 15 boarders paying fees from 80 to 90 guineas per annum, and 47 day pupils paying from 12 to 30 guineas per annum; gross receipts about £3,000 a year. Goodwill £950; furniture could either be taken at valuation, or would be let with the house at £180 per annum.—T 2,502.
- YORKSHIRE.**—High-class Boarding and Day School containing over 100 boarders at fees from £60 to £72 per annum, and 20 day pupils paying 15 to 18 guineas per annum; gross receipts over £9,000. Would make suitable arrangements with a capable lady qualified to run a large Boarding School and able to pay down from £1,500 to £2,000.—T 3,063.
- SOUTH COAST.**—Good class Day and Boarding School containing 12 boarders paying from 50 to 60 guineas, and 126 day pupils paying from 6 to 15 guineas per annum; gross receipts £2,000, net profit over £700 a year. Goodwill £450, furniture at valuation. Would accept £400 down and receive a partner with a view to early succession.—T 2,816.
- LONDON.**—High-class Day School for girls and little boys containing 104 pupils paying 12 to 19½ guineas per annum; gross receipts over £1,800, net profit £600; nice premises in own grounds. £1,500 required for goodwill; furniture at valuation. Part of purchase money could be paid off by instalments.—T 3,092.
- NEAR LONDON.**—Partner, or Senior Mistress with a view to partnership, required in high-class Boarding and Day School for girls, containing 31 boarders paying from 90 to 99 guineas per annum, and 65 day pupils paying 12 to 21 guineas per annum. Gross receipts about £6,000, net profit about £1,200. Applicants should be University women, or, if not, capable of taking entire charge of the domestic side of the school.—T 3,066.
- BERKSHIRE.**—Good class Church of England Boarding and Day School, containing 16 boarders paying from £60 to £75 per annum, 9 day boarders paying from 18 to 24 guineas per annum, and 7 day pupils paying from 9 to 15 guineas per annum; gross receipts over £1,400, net profit £355. £1,000 required for goodwill and furniture, half of which could be paid off by instalments. School being sold owing to death of Principal. Excellent prospects for development.—T 3,098.
- SOUTH COAST.**—Partner, with view to early succession, required for a successful high-class Boarding School, containing 46 boarders paying average fees of £105 a year. Excellent premises standing in large grounds, the property of the Principal, who is prepared to let them to her successor. Gross receipts between £3,000 and £4,000; net profit about £800. Favourable terms offered to a suitable partner who is qualified to run the educational side of the School, and who could, if desired, join as Head Mistress at £150 per annum in the first instance.—T 1,069.
- YORKSHIRE.**—High-class Boarding and Day School containing 33 boarders paying from 70 to 90 guineas per annum, exclusive of extras, 23 day boarders paying from 27 to 33 guineas per annum, and 12 day pupils paying from 18 to 24 guineas per annum. Gross receipts nearly £5,000 per annum; net profit last year over £1,400. Goodwill £1,500, furniture at valuation. Vendor willing to negotiate with suitable purchaser in a position to pay down £1,000.—T 3,042.
- IRELAND.**—High-class School for daughters of professional men; 36 boarders paying fees from £50 to £90 per annum, 60 day pupils paying from £6 to £30 per annum; gross receipts £3,600, net profit nearly £1,000 a year. Reasonable terms made with suitable successor, who must be an Evangelical Churchwoman. Part of purchase money could be paid off by instalments.—T 2,538.
- HOME COUNTIES.**—Boarding House in connexion with Public High School, containing 45 boarders paying from 60 to 66 guineas per annum, in addition to tuition fees; gross receipts £2,000 a year, producing a satisfactory profit. £1,000 required for goodwill and a certain amount of furniture. Part of the purchase money could be paid off by instalments.—T 3,078.
- WEST OF ENGLAND.**—Well established Boarding and Day School containing 17 boarders paying from 60 to 75 guineas per annum, and 33 day pupils paying from 12 to 21 guineas per annum, who are all girls of a good class. Gross receipts nearly £2,000 a year, net profit between £300 and £400 a year. Goodwill £700, furniture at valuation.—T 3,084.

Messrs. TRUMAN & KNIGHTLEY have also a limited number of openings for investment in Boys' Schools.

All communications and inquiries are treated in the strictest confidence.

BLACKIE & SON'S NEW LIST

The most successful French Course of recent years.

A JUNIOR FRENCH COURSE.

FIRST AND SECOND YEARS.

PUBLISHED IN TWO VOLUMES.

By **E. J. A. GROVES**, Lic. ès L., Senior French Master, Bedford Grammar School.

First Year, **2s. 6d.** net.

Second Year, **4s.** net. *Now ready.*

The need of a practical French Course combining the essentials of the "Direct Method" with sound grammatical teaching has long been felt, and has been lately emphasized by the Reports on the *Teaching of French* issued by the Board of Education and the London County Council respectively. The "Direct Method" alone has been found to leave the pupils ill prepared for precise expression or exact renderings in translation, and generally wanting in an exact knowledge of French. Mr. Groves's *Junior French Course*, now issued, undoubtedly demands the consideration of all Modern Language teachers, for it will be found to combine all that is useful of the "Direct Method" with systematized grammatical instruction, largely by process of induction.

BLACKIE'S FRENCH PLAIN TEXTS.

Price **4d.** each.

The texts in this series are issued without either Notes or Vocabulary, to meet the views of those teachers who prefer to dispense with such aids; and also to allow of their being used for the various purposes for which nothing but a plain text is suitable. Brief introductions are provided.

LETTRES DE MON MOULIN.

By ALPHONSE DAUDET.

LE PAVILLON SUR L'EAU, &c.

By THÉOPHILE GAUTIER.

UN ÉPISODE SOUS LA TERREUR.

By HONORÉ DE BALZAC.

LA DERNIÈRE CLASSE, &c.

By ALPHONSE DAUDET.

LA MULE DU PAPE, &c.

By ALPHONSE DAUDET.

LE PETIT CHOSE A PARIS.

By ALPHONSE DAUDET.

L'AVOCAT PATELIN.

JEANNE D'AR.

By JULES MICHELET.

MATEO FALCONE, &c.

By PROSPER MÉRIMÉE.

BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase List, and Vocabulary. Fcap. 8vo, **1s.** net each.

BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo, **7d.** each.

EPISODES MÉMORABLES DE L'HISTOIRE DE FRANCE.

General Editor, LOUIS A. BARBÉ, B.A., Officier d'Académie. With Introduction and Vocabulary. **10d.** net each.

The texts in this new series have been drawn from the works of writers of acknowledged literary merit, such as Michelet, de Lamartine, Voltaire, de Barante, and Henri Martin.

Each text is provided with an introduction containing such preliminary information as is necessary for the adequate understanding of the episode dealt with.

PRISE DE LA BASTILLE.

From Michelet's *Histoire de France*.

LA ROUTE DE VARENNES.

From Michelet's *Histoire de France*.

LES FRANÇAIS À LA 1^{ère} CROISADE.

From Henri Martin's *Histoire de France*.

Others to follow.

COURS DE FRANÇAIS, d'après les Textes.

PATON'S LIST of SCHOOLS and TUTORS

23rd ANNUAL EDITION NOW PREPARING.

An Aid to Parents in the Selection of Schools.

**EVERY YEAR THOUSANDS OF PARENTS
CONSULT THIS BOOK.**

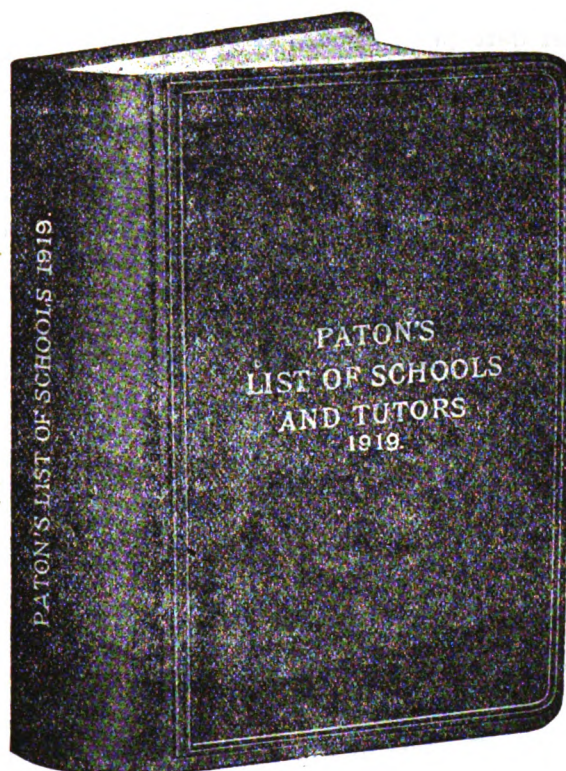

"I am glad to find I have got another pupil this term through the advertisement of the school in your book, so am glad I was persuaded to keep it in."

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"I enclose a request to have my notice renewed. I would not for anything leave it off now."

"When I first came here I spent over £50 in six months advertising in the leading papers—result, **one** boy. Then I came under your Agency—result, a **steady stream** of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

National Library of Ireland, Dublin.—"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term **four** pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

Specimen Copy and full particulars sent free
of charge to Head Masters and Head Mistresses.

TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

The Council desires to make known to all

UNREGISTERED TEACHERS

that

1. The full CONDITIONS OF REGISTRATION will come into force at the beginning of the year 1921. Up to 31st December, 1920, teachers may be admitted to Registration on proof of EXPERIENCE ALONE, under conditions satisfactory to the Council. After that date proof of ATTAINMENTS and PROFESSIONAL TRAINING will be required.
2. The OFFICIAL LIST OF REGISTERED TEACHERS is now being revised. Entries for the Revised List will close on WEDNESDAY, 30th JUNE, 1920.
3. On and after the same date, WEDNESDAY, 30th June next, the uniform fee for Registration will be TWO POUNDS, instead of ONE GUINEA as at present.
4. Registered Teachers may count their teaching service prior to 1st April, 1919, as QUALIFYING SERVICE FOR SUPERANNUATION, where the service has been accepted by the Council.

Teachers who are not already Registered should complete the form below and post it without delay to the Offices of the Council.

To the SECRETARY, TEACHERS REGISTRATION COUNCIL,
47 Bedford Square, LONDON, W.C. 1.

Please forward.....Form(s) of Application for Registration to

THE JANUARY MEETINGS.

THE ASSOCIATION OF HEAD MASTERS.

PROBABLY no annual meeting of this Association has been so well attended as was that on January 1 and 2, in joint conference for part of the session with the Head Masters' Conference. The number of members who had intended to be present amounted to nearly 250 out of a total of 665. Over 170 votes were cast in one case. At times members seemed unable to find seats in the Council Chamber of the Guildhall.

The Association always looks for stimulating addresses from its presidents, whether in the literary style of Mr. Rushbrooke or in the practical lively vein of Mr. Smith. His story of the governor, who wished to buy quicksilver, by the ounce to keep it fresh, was quoted by most newspapers, though his plea for unity, for efficiency, and for registration was less emphasized. No doubt the press knows what the public likes to read about education.

Sir John McClure proposed "that the Council of the Association be requested to consider and report as soon as possible on the application of the Whitley Scheme to educational work, and that for this purpose the Council of the Association be asked to consult with the Teachers Registration Council, as the body representative of the teaching profession," and the resolution was adopted. After formal introduction of the motion the meeting settled down to hear Mr. Roscoe's description of Whitley Councils as applied to labour, and signified its desire that the plan should be adapted to the needs of education. The speaker pointed out that the Councils were intended for the representatives of employers and their workmen in order to settle trade disputes. We all know who the labourers at the looms of youth are; but who are the employers? The L.E.A.? The State? The governors? The parents? Difficulties can be overcome, said Mr. Roscoe, with goodwill, and from the broad base of school-committees might emerge a real national council, the work of which would be to champion the cause of education against the attacks of doctrinaires and of ignorance.

At the Joint Session of the Conference and Association the reception and adoption of the Report of the Joint Committee on State Control was moved by the Rev. Dr. A. A. David (of Rugby). But on the motion of Mr. Edwards (Bradford) it was eventually resolved that "this meeting feels that much fuller inquiry is necessary from all classes of schools before any definite recommendation can be made upon the matters dealt with in the report of the Joint Committee on State Control."

It will be remembered that the interim report of the Joint Committee raised no slight storm when it was presented last spring. At the present meeting Dr. David failed to satisfy the majority of his hearers. There seemed to be an unexpressed wonder why certain schools, after long holding aloof from the offers of the Board of Education, should decide that they desired to earn grants or at least be recognized for "pensionable service." The proposals did not appear likely to increase materially the number of free-placers drawn from elementary schools. The opponents seemed to come from day schools, while the smaller boarding schools were in favour of the Report. Neither the persuasiveness of Mr. Cholmeley, nor the chance of providing boys from rural districts with scholarships, nor the prospect of diluting all forms at public schools with three free-placers each, could convert the followers of Mr. Edwards, whose amended motion was finally carried by 104 to 67 votes.

The paper of Mr. Iliffe in proposing that "this meeting observes with serious alarm the deficiency in the supply of trained teachers for secondary schools," and the address of Mr. Hendy in support, convert the followers of Mr. Edwards, whose amended motion marked, when votes of thanks were being passed, that a trade which offered proper chances to craftsmen would not need to bribe apprentices to enter its ranks by subsidizing the preparation for their career.

Mr. Cholmeley's resolution, "that this meeting sees with regret the revival since the war of the tendency to promote public championship competitions among schools, and generally to exploit school activities for the entertainment of the public," directed against public exhibition of youthful bruisers, met with considerable sympathy. He called attention particularly to the evil of turning boys' amusements into a spectacle.

Dr. J. E. King agreed with him, as did the meeting unanimously.

Dr. Norwood moved: (a) "That the time has come when all English universities and all professional bodies should accept the seven school certificate examinations, which have been recognized by the Board of Education, as equivalent and interchangeable, for the purpose of matriculation and for entrance to professional studies." (b) "That inasmuch as a student cannot obtain a school certificate without showing that he has reached a sufficient standard of knowledge in the three main sides of secondary education, the professional bodies should be pressed to accept school certificates without specifying the particular subjects which are to be taken." (c) "That, in particular, though it is fair to demand that the examination should be passed at the credit standard in some or all of the subjects, it is inadvisable to name the subjects in which this standard is to be reached."

The three resolutions introduced by Dr. Norwood were well received, though fears were expressed that the acceptance of them might enable a boy to go to Leeds to study engineering with no knowledge of mathematics, or to Oxford ignorant of Latin or Greek. No one suggested that any university would be elastic enough to encourage such students. The whole subject, it was felt, was overshadowed by the report that the Board's committee on examinations will one day produce.

Mr. Malim's resolution, "that this Association urges that, when it is necessary to grant to a school additional financial aid, the local education authority should grant such aid without imposing conditions likely to diminish the responsibility of the governing body or to change the character of the school, provided always that they are satisfied that the educational efficiency of the school and the interests of the pupils are adequately safeguarded," was carried with the addition of the riders: (a) "The best form of aid to endowed secondary schools is by a deficiency grant from the local education authority on an approved estimate"; (b) "The consideration of the conditions of aid should be referred to the Council of the Association," to avoid suspicion that aided schools wished to stand outside any national scheme. The schools concerned made out a good case for increased financial assistance; and it was thought that as many as possible should be saved from the official rule and line, consequently the two riders were added for the benefit of those who wished to know in what form help were best sought from the local education authority.

In the course of the debate much was said about elasticity. Now the word denotes—in the mouth of the head master, auto-cracy; in that of the parent, variety (especially in favour of his son); in that of the official, cohesion!

Mr. W. H. Barber moved "that this Association urges the appointment, as recommended in the Report of the Royal Commission on the Civil Service, of an additional Civil Service Commissioner with scholastic experience, and hopes that in addition regular consultations will in future be held between the Civil Service Commissioners and associations of acting teachers." As it is likely that certain recommendations of the Commissioners will be adopted, Mr. Barber had little difficulty in carrying his motion.

Mr. Paterson (of "South of the Bridges" fame) explained the workings of the employment agency that the Government are setting up for schoolboys of sixteen to eighteen years of age. He announced that at Howard Hotel, Norfolk Street, they knew of more vacancies than they had as yet boys to fill. The attempt he is making is one of importance, and it is one in which the convenience of the school must give way to the benefit of the boy, even if the latter leaves just before an inter-school cricket match.

Mr. Bailey's motion was carried unanimously:—"That in the opinion of this Association, the co-education secondary day schools have established a claim to be regarded as an important part of the educational system of the country. It is, therefore, most desirable that in justice to these schools both those who are responsible for the work done in them and the inspectors by whom that work is judged should have knowledge of, and sympathy with, the ideals of co-education."

There was more in Mr. Bailey's resolution than appeared in print. Behind the remarks of several head masters loomed a spectre. It is unfortunate that any suspicion of the introduction into scholastic matters of the politics of the feminist movement should have arisen. Co-educational schools may be good in themselves—undoubtedly they fill gaps—and the loss of them (they number two hundred) would make education difficult in many small centres. Two interesting facts emerged from the debate: (1) that head mistresses think so much of the senior mistress in dual schools that they give them the status of heads in their association; (2) that, when they are taught together, girls can only pass at the age of sixteen plus an examination which boys tackle successfully a year earlier.

Whether it is well that girls and boys should be brought up on a similar curriculum was not discussed.

ASSOCIATION OF HEAD MISTRESSES.

THE Association of Head Mistresses held two meetings in connexion with the week of conferences, under the chairmanship of the President, Miss Major. On January 8, Miss Alice Silcox (Thoresby High School) opened a discussion on "Free Secondary Education," at a meeting confined to members of the Head and Assistant Mistresses' Associations. Much disappointment was felt at the announcement that Dr. Constance Long was unable to fulfil her promise to speak on "Psycho-analysis" at this meeting. The last hour of the morning was filled by Miss Jane Latham's speech on "The best means of providing religious education in secondary schools."

On January 9, a crowded audience listened with undisguised appreciation to two inspiring papers. Mr. H. Barrett Carpenter (Rochdale School of Art), in his address on "The True Place of Art in Education," blended the materialistic and spiritual with poetic touch; and his audience was left with the happy experience of having listened to, if not entertained unawares, an angel bearing a true artistic message with a very real meaning for this workaday world.

Prof. Stewart Macpherson (Royal Academy of Music), in his address on "The Place of Music in the School Curriculum," was no less convincing than Mr. Carpenter had been. From his deep and wide experience he was able to justify his contention that the school should be the nursery of music, as of other studies—that the school should deal with the absolute fundamentals of the art—with the training of the child's ear and the sensitizing of his aural and rhythmic faculties, because, as Sir Hubert Parry had said, "it is the sympathy of the higher type of mind and temperament which feeds the higher artistic natures." Prof. Macpherson prophesied the production of our great national musical genius only when we were fit as a people to receive him.

ASSOCIATION OF ASSISTANT MISTRESSES.

THE annual general meeting of the Association of Assistant Mistresses, held at University College during the conference week, consisted of a business meeting for members only and two open lectures. The business was of an extremely varied nature, including the presentation of the balance sheet, a statement of the position of the Loan Fund, and reports of the work of various educational bodies on which the Association is represented. A pleasing incident was the unanimous election of Miss K. Andrews as an honorary member. The Association welcomed this opportunity of showing once more their appreciation of Miss Andrews's work. The retiring president, Miss Laurie, took as the subject of her short address "Health and Education." She pointed out that physical deterioration—though due in part to race inheritance—is also largely caused by bad conditions of life; and that, though there has been great improvement in public sanitation in the last fifteen years, the improvement in the hygienic condition of homes and schools has not been equally marked, and there is still room for development in the organization of physical education and in the study of hygiene in schools. A lively discussion arose on paragraph 3 of the Education Policy pamphlet, which was finally amended in such a way as to suggest that free secondary education will most probably prevail in the end, whether we approve of it or not. Proposals to raise the subscription from 5s. to 10s., and to introduce the increase at once, were carried with few dissentients.

Only brief reference can be made to the open lectures, each of which drew a large audience. Dr. Olive Wheeler made a striking impression by her remarkable gift of exposition, and welded into a connected whole the theories of the development of the human mind and personality advanced by some of the foremost thinkers of the day; while Mr. Evan Hughes claimed that some knowledge of the principles of economics is a necessity for every citizen who wishes to understand the complex social conditions of our times, and to play a proper part in the life of the nation.

ASSISTANT MASTERS' ASSOCIATION.

SOME time was spent at the annual meetings in discussing additions to educational policy. It is the opinion of the Association that the normal length of a teaching period should not exceed three-quarters of an hour in preparatory and junior departments, nor one hour in senior departments, except in special cases; that opportunities for individual reading during teaching hours should be encouraged; that the total number of learning hours should not exceed twenty-five per week in preparatory and junior departments, and thirty in senior departments; that the less fatiguing subjects should be taken in the afternoon; that evening preparation should be short, but carefully provided for—none in

preparatory departments, not more than one and a half hours in junior departments, and not more than two hours in senior departments; that the teaching staff should number at least one to every eighteen boys in the school, and that in no case should there be more than twenty-five pupils in a class.

As regards bursaries, the Council condemned any system whereby a boy was pledged, at an earlier age than eighteen, to become a teacher. A former resolution approving the principle of universal military training in schools was rescinded. The policy of the Association now is that a system of physical training, of a non-military character, including the development of the power of initiative and leadership, should be universally adopted.

As regards salaries it was resolved that the best interests of education can be adequately secured only by the adoption of a National Salary Scale of £300-30-£800; and that the first step towards this should be the immediate institution of a minimum scale of £300-20-£600—all registered teachers to be placed at the position on the scale which they would have reached had it applied to the whole of their teaching career.

Various amendments to the Superannuation Act were demanded, the chief being that all teachers who have served in schools certified as efficient, either by the Board of Education, by a university, or by the local education authority, or whose service prior to April 1, 1919, is "qualifying service" under the present regulations, should be eligible for benefits under the Act; that there should be a minimum pension of £300 at sixty after thirty years' service; and that the clauses dealing with medical examination should be so altered as not to include existing teachers.

Mr. Fisher's statement that the salaries of secondary teachers had increased by 80 per cent. during the past three years created something like consternation, for it was contrary to the personal experience of nearly every man in the audience. Mr. Fisher has since acknowledged that he made a mistake. What he ought to have said was not that the average salary of assistant masters in secondary schools had increased by 80 per cent., but that the total expenditure of local education authorities on salaries of teachers in secondary schools and other places of higher education had increased by 80 per cent. Mr. Fisher adds that the Incorporated Association of Assistant Masters are at liberty to take any steps they think fit to correct the misstatement.

THE PRIVATE SCHOOLS ASSOCIATION.

THESE meetings were characterized by remarkable enthusiasm and unanimity in face of the difficulties produced by the Education Act and the Superannuation Act.

On January 2 the Association (in conjunction with the College of Preceptors) was addressed by Sir Philip Magnus, who pointed out the unfairness of the Superannuation Act, since it excludes from its benefits all part-time teachers and all teachers (however highly qualified and efficient) who are labouring in schools which are not supported by the State. This injustice will affect university lecturers, and tend more and more to deplete the staffs of the best privately conducted schools—which have hitherto, and are now, rendering great service to the cause of education. The existence of such private schools was greatly to be desired, as they provided an important type of education—adaptable and elastic—such as could not be found under the direct control of a bureaucratic Board of Education.

On January 6 the Council of the Association formulated a scheme securing efficiency in private schools, and claimed that the State ought not to seek to damage—directly or indirectly—any school that was doing sound educational work. A strong feeling was also manifested that the numerous educational associations should unite more closely and co-operate to defend the liberties of the teacher—it being recognized that all teachers belong to the same profession and ultimately are seeking the same goal. In the evening, at the annual dinner, Mr. F. Roscoe suggested that private schools were an antiseptic against the poison of over-officialism, and Sir John Rees remarked that the public had not the slightest idea as to the colossal expense which would be involved if and when the Education Act came into full operation.

On January 7 the Association held an open meeting, at which addresses were given on "The Parents' Right of Choice." Mr. Maxwell pointed out that the tendency of recent legislation was to reduce education to a single type—thus leaving the helpless parent no choice. Mr. F. Roscoe aptly remarked that education was being rationed out by the Board of Education, and that the cause of true education would suffer from increased regimentation and official control. Many people had ceased to take any interest in the education of their children, because they had it provided free and were not consulted, nor were their wishes considered by the authorities.

TEACHERS' GUILD.

THE report presented to the annual general meeting of the Teachers' Guild disclosed a year of activity, accompanied by gratifying success, financial and otherwise. Sir Henry Hadow was elected president in place of the Rev. Canon Masterman, who retired after holding office for a second period of two years. The vacancies on the Council were filled, and the Rev. the Hon. E. Lyttelton was re-elected hon. treasurer. The meeting was followed by an address from Canon Masterman. His subject was "Whitley Councils and the Teaching Profession." He worked out the way in which the methods laid down in the Whitley Report could be applied to education, postulating that it was a right, not merely a privilege, of those engaged in education to take part in its regulation. The "Works Committee" of the Whitley Report would, he said, be the school council, consisting of equal numbers of representatives of school authorities and of teachers. The "District Council" would be represented by county or county borough councils and by groups of these formed into provincial councils. The "National Council" of the Whitley Report, in Canon Masterman's opinion, afforded the opportunity for establishing a real Board of Education, consisting of a certain number of Members of Parliament and representatives of the administrative staff of the department and of the teachers. Canon Masterman outlined the subjects with which the councils should deal and the conditions necessary for the success of the system.

Mr. Craddock's paper on the "New Discipline"—or, as he preferred to call it, "The Newer Discipline"—followed, and attracted a great number of interested listeners. He gave a detailed account of his work with his pupils (boys of about thirteen), and made out a good case for his method. The class was a republic with a committee to manage its affairs. The idea of sport was developed and the class took sides. The result was that the clever boys coached the stupid so that the side would score. Many questions were asked, and there was some criticism of the element of competition introduced. Mr. Craddock maintained that it was a healthy competition and preferable to the old system of every boy for himself. The master's work was not lessened—it was more effective. He was always in the background and keenly interested in the boys' doings.

The afternoon session was devoted to the question of "The Selection of Elementary-School Children for Higher Forms of Education." The subject was dealt with in papers read by Mr. G. F. Daniell (of the Kent Education Department), Miss Crosby (Chelsea Secondary School), and Mr. Willey (Grimsby Municipal College). It appeared to be agreed that the only satisfactory method of selection was an examination supplemented by reports from the teachers as to both the capability and the circumstances, home and otherwise, of the candidates. The final examination, it was suggested, should include (1) a written test in English, made up of broad questions not so much asking for information as giving scope to the mental powers of the candidates; (2) an interview examination which should be conducted by experts. In the discussion which followed several speakers suggested the desirability of formally consulting the parents and teachers before awarding the scholarships.

ASSOCIATION OF UNIVERSITY WOMEN TEACHERS.

At the meeting of the Association of University Women Teachers, held on January 8, Prof. John Adams gave an address on "Tests of Intelligence," Miss Alice Woods taking the chair. The meeting was packed to overflowing. Prof. Adams said that, as the subject had recently been dealt with by Dr. Ballard, he would approach it from the practical rather than the psychological point of view. Tests of intelligence were frequently devised so as to test knowledge rather than capacity, and it was with the object of finding some method of standardizing capacity that new methods had been devised. Prof. Binet had invented various tests, constituting the "Echelle," and by means of these had collected sufficient evidence to establish a rough average capacity for each year of a child's life. His investigations were described in his book, "Les Idées Modernes sur les Enfants." The teaching profession was, on the whole, inclined to view Prof. Binet's methods with profound suspicion, although a small group of teachers accepted the tests enthusiastically and perhaps too readily: another small group accepted the tests for what they were worth and tried to improve them. In the interests of society it was most desirable to have some means of discovering the most suitable individual for any special piece of work. Teachers might co-operate with employers in the selection of candidates for particular jobs. Some London firms had already made use of psychological experts for this purpose, and in the future it was probable that these means would be far more widely employed.

THE FROEBEL SOCIETY AND JUNIOR SCHOOLS ASSOCIATION.

At the annual meeting of the Froebel Society, on January 6, Major J. Shelley was elected president for the second year. He gave a vivid speech on "The Seriousness of Play." He asked teachers to evoke the play spirit which gives us the vision of the future. It did not limit itself to the intellectual and physical sides of life; play was intuitional and spiritual. Out of play came, on one side, art, and on the other side, religion. As we play we become richer in vision, we learn more of the Universe through our dream. That is why we are here; we are not here to work, but to play; we are here to grip the Universe with that energy that bursts forth making us forget all else but the vision. As long as we make progress in this we are living and playing. But if we are merely gathering together a lot of things which go to make us comfortable, so that we do not give this spirit a chance of working, then we do not want to play. We need not fear the revolution that is based on the play spirit. The moral code of the play spirit is infinitely higher than the legal code of any country. The play spirit is a spirit of freedom. The person without this is going to be an economic nuisance; he is going to gather as much material goods as possible; but the person dominated by this play spirit will put up with any sort of material discomfort and will enjoy life. We run a great danger of losing this spirit. We are regarding life as something which is given in order to "produce"—a word we have heard lately. Unless the people of the nation possess that play spirit—that is to say, the spirit of giving forth and of making finer human beings—there is no point in production. Give people a chance of expressing themselves and they will produce without thinking. It is our conception of what life is that has to serve the play spirit so that life may mean not what it is, but what it might be. Play is the basis of real culture. And we must remember that the play spirit is intimately knit up with the process of imagination—imagination that contains not merely the past but the future. The development of the spirit of play in the school is the development of the child to appreciate or to understand the life to come.

In the afternoon a conference on Nursery Schools took place. Miss Brown-Smith was in the chair. Miss Owen, Miss Reed, Miss Stokes, and Miss Grant gave the essential conditions for a true nursery school. The speakers asked for more freedom of action, more time to obtain the goodwill of the parents, and for training not only for superintendents but also for inspectors.

THE JOINT CONFERENCES OF EDUCATIONAL ASSOCIATIONS.

THE first of these Conferences met at University College, January 3. The subject was "The Work of Continuation Schools." The chair was taken by Sir William Ashley, who, in introducing the speakers, pointed out that we could now dispense with the advocacy of the principle of continuation schools, for they had received legislative sanction. Practical difficulties have still to be met—for example, in deciding how far the instruction to be given is to be vocational or "humane." It is nowadays hard to forecast the direction of human occupation. Unskilled work is being gradually abolished. A novel complication of the situation is due to attendance at continuation schools being neither entirely compulsory nor wholly voluntary. Mr. Spurley Hey (Director of Education for Manchester), in the first paper on the subject, reminded the audience that the provisions of the Education Act relating to continuation schools would not come into operation completely until autumn 1921. He estimated that by this delay three million pupils would escape the compulsory clauses. Local authorities must use this interval in making preparations. The provision of buildings is one great difficulty, and the enrolment of an adequate staff another. Teachers are inadequate, both in quantity and quality, for the work to be done. He deprecated the institution of works schools on works sites, and urged educational authorities to keep in touch with local social life and to seek the advice of those who represent it. Mr. Beresford Ingram (Director of Continuation Education, L.C.C.) drew attention to the difficulties to be encountered, the chief of which is the ignorance and apathy of the public and its opposition to the compulsory clauses of the Act. As regards the curriculum to be adopted, he advocated that the greatest freedom should be allowed to the principles laid down in the Lewis Report. Mr. Dover Wilson (of the Board of Education) maintained that the line of demarcation between humanism and vocationalism proves largely illusory. It would be a profound mistake to make the curriculum purely literary. He would have teachers start with the "job" of the pupil in the works, and lead on to history, geography, and other broad subjects. The literary side of education he would approach through the drama and acting and through composition. He

insisted on the necessity of libraries in continuation schools. Mr. Thomas read a paper by Mr. Rooksby (of Harrod's, Ltd.) describing the work of the continuation school established by that firm.

The large audience highly appreciated the various papers, and an animated discussion followed, which only terminated when the time allotted to the Joint Conference was exhausted.

The second Joint Conference of the Educational Associations at University College was devoted to the subject of "Adult Education." Canon Masterman presided, and, in introducing the speakers, stated that the problem facing them could only be met by a large extension of the methods by which this type of education is at present supplied. He hoped that the audience would not fall into the error of thinking that the movement for organizing and improving adult education had any special reference to the class of society commonly called the working classes. Every member of society who was of any use was always undergoing the process of being educated. The first speaker, Mr. Tawney (member of the Government Commission on Adult Education), endorsed this warning. The prominence of the working classes in forwarding the movement showed that they appreciated it more, and needed it less, than others. Adult education was not a *pis aller* or stopgap. It differed from university education in that the latter was necessarily based on some principle of selection. The problem was how to provide a continuous liberal education open to all, so that no person, in order to get it, should feel it necessary to try to get away from his class and associates. Where university extension work has been carried on it would be easy to continue and expand it. It is wrong to depreciate such work. One essential condition of effecting an improvement was that the system adopted should not encroach on the autonomy of the students themselves. He advocated a joint control of the movement by voluntary and local authorities. The expansion of this movement would not impinge on the universities; but, he urged, the universities should offer greater facilities and uphold a university standard in extra-mural work. Short courses all the year round should be developed, and the universities in great cities should hold themselves responsible for the education in their areas.

Mrs. Ensor affirmed that the general interest in this subject was not large enough. She dealt with the question as it affected women, and complained that the Report of the Government Commission did not sufficiently emphasize the equal need of women with men in this regard, and took too little account of the special difficulties attaching to women. Social conditions affect women more than men. Factory women have always something to do at home. She looked forward to the time when improvements in household arrangements and appliances would give women more leisure. As to the curriculum, she stated that every type of education must be supplied, and that it must be remembered that women often felt a reaction against domestic work and must be provided with something different. The curriculum should include creative work. She urged the importance of residential classes—for example, summer schools at universities and other picturesque cities, and declared that there was need of grants to enable experimental courses to be carried out.

The ex-Premier of South Australia, Mr. Crawford Vaughan, gave the meeting an account of the work being done for adult education in Australia, and agreed with previous speakers as to the necessity of guarding the autonomy of workers' associations. He drew attention to the special needs of sea-workers and explained the activities of the World Association for Adult Education, of which he was a representative.

An interesting discussion followed, in which a great number of the audience took part.

NORTH OF ENGLAND CONFERENCE.

THE thirteenth annual meeting of the North of England Education Conference was held at Southport from January 8 to 10. This is the first meeting since 1914—the conference having been suspended on account of the war.

Mr. Fisher delivered the inaugural address. This year, he said, would be a critical year. It is now many months since the armistice was signed. A vast army has been demobilized, and the population of the country has settled down into its peace-time avocations. As we change from a state of war to a state of peace, our conception of values changes, and, educationally, a director of secondary education becomes more important at present than a general, and a committee of a county authority a more important body than a divisional staff, and as the great army which has fought our battle so gloriously had dispersed, so in the various avocations of civil life the community has a right to expect that the new army against ignorance which carries on its campaign in the schools and colleges of the country will be equally stanch, equally valiant, and equally devoted. We have all received our marching orders. They are contained in the Education

Act of 1918, and there is no intention on the part of the Government to abate one jot or tittle of that Act. Referring later to the half-time system, he said that, if the abolition of half-time had been the only feature of the Education Act of 1918, it would be sufficient to make that measure a landmark in educational progress. This year will witness, said Mr. Fisher, the establishment of a level of remuneration in the elementary, the secondary, and other branches of the teaching profession, which will bring peace and contentment into the educational world, and spare us any currents of distressing and embarrassing conflicts—and every listener appeared to hope it might be so.

A debate followed on the Education of Adults. The subject was introduced by Sir Henry Hadow and continued by Mr. McTavish (Secretary of the Workers' Educational Association), but though other speeches were invited no other speakers took part.

In the afternoon of January 9 a number of sectional meetings were held, at which many subjects were discussed, including School Certificate Examinations, the Place of Art in Education, Central Schools and Secondary Schools, the Teaching of History, and Political Education in Public Schools.

The general meeting on the concluding day was devoted to a conference on Continuation Schools in Urban and Rural Areas. The debate was opened by Major Gray and Mr. W. A. Brockington, whose paper on "Rural Continuation Schools" was a notable contribution which will be of great service to many county education committees.

The concluding afternoon was filled with four sectional meetings, at which the following subjects were discussed:—"Methods of Selection of Children for Further Education"; "The Place of Music in Schools of Various Grades"; "Juvenile Employment and After Care"; "Modern Developments in Physical Education" and "Play Centres."

The invitations issued totalled 3,000 and 1,250 cards of admission were applied for. Forty-two publishers exhibited books, and twelve firms contributed to the exhibition of school pictures, which was a welcome addition to the conference.

The Conference of 1921 is to be held at Sheffield.

SCIENCE MASTERS' ASSOCIATION.

A LARGE gathering attended the annual general meeting of the Science Masters' Association, which was held at the London Day Training College, on January 6 and 7. The infusion of new blood, consequent on the recent broadening of the basis of the Association's membership, had much to do with the success of the meeting. In the presidential address, Mr. W. W. Vaughan, Master of Wellington College, called the attention of science masters to their responsibility in teaching the subject not from utilitarian motives but with the purer aim of establishing a love of truth in the minds of their pupils.

Several speakers, including Prof. Hickson, spoke of the need of giving a broad outlook on science to the younger pupils, and of the importance, therefore, of including a considerable amount of biology in the curriculum. There was, however, an amusing difference of opinion on the part of the experts present as to the relative values of botany and zoology for this purpose, some maintaining that the latter subject, though desirable in itself, did not lend itself easily to class work. It is certain that the scope of science teaching in the pre-matriculation period has been far too limited, and that it has often been restricted to what is suitable for laboratory practice. Sir Richard Gregory made out a good case for the divorce of experimental work from the lecture-room courses. The latter, he said, should aim chiefly at maintaining interest and giving breadth of view; the former should be on heuristic lines in a limited field and not a soul-destroying liturgy.

Mr. H. Preston (of Caistor Grammar School) said that science masters should feel it a duty to train boys engaged as laboratory assistants so that they might become qualified for responsible positions in after life. He gave details of his own practice in this matter, and said that his first five assistants were now earning bigger salaries than the man who had taught them. As this was spoken in a spirit of pride, quite untinged with bitterness, it made all the stronger appeal to the audience. Mr. Preston also introduced a discussion on the excessive price of scientific apparatus. He gave many instances, taken at random, where the prices of articles had increased to between three times and ten times their pre-war figures. This state of affairs was attributed chiefly to two causes—restrictive measures by the trade unions and profiteering. The Association appointed a committee to deal with the matter.

Other subjects that were discussed included "Science in the Preparatory School," "The Teaching of Science to Junior Forms," and "The Teaching of Organic Chemistry." Dr. Crommelin,

RECENT PUBLICATIONS

The Elements of Analytical Conics.

8. By C. DAVISON, Sc.D. Crown 8vo. 10s net

The range to be covered by an elementary textbook of analytical conics is not as yet defined. The author has excluded the general equation of the second degree and all more advanced branches of the subject. The more important properties of the conic sections are proved analytically, and rectangular coordinates are used for the most part. The exercises in the text are somewhat numerous.

Plane Trigonometry for Secondary Schools.

By C. DAVISON, Sc.D. Crown 8vo. 6s 6d net

"The first sixteen chapters of this book include the ordinary course of elementary Trigonometry, while the remaining four deal with de Moivre's Theorem, series, &c. The book is well up to the standard set by the author in his well known textbooks of algebra and geometry."—*The A.M.A.*

The Theory of the Imaginary in Geometry,

together with the Trigonometry of the Imaginary. By J. L. S. HATTON, M.A., Principal and Professor of Mathematics, East London College. Royal 8vo. 18s net

Those who approach the subject with an open mind will, it is believed, find in this work a consistent and natural theory of the imaginary. The theory set forth in it may be regarded from the analytical point of view as an exposition of the oft-quoted, but seldom explained, "Principle of Continuity."

A Treatise on the Mathematical Theory of Elasticity.

By A. E. H. LOVE, D.Sc., F.R.S., Sedleian Professor of Natural Philosophy in the University of Oxford. Third edition. Royal 8vo. 37s 6d net

Collected Scientific Papers.

By JOHN HENRY POYNTING, Sc.D., F.R.S., Mason Professor of Physics in the University of Birmingham. With Portrait and Memoirs. Royal 8vo. 37s 6d net

Practical Exercises on the Weather and Climate

of the British Isles and North-West Europe. By W. F. STACEY, F.R.G.S., F.R.Met.Soc. Large crown 8vo. 2s 6d net

The chief aim of this book is to present in as simple a manner as possible a series of exercises which bring out the main principles in the study of British Weather. The basis of the whole work is the actual construction of weather maps. All the data have been taken directly from the daily reports issued by the Meteorological Office.

The Study of the Weather.

By E. H. CHAPMAN, M.A., B.Sc. Large crown 8vo. With 56 illustrations. 3s 6d net. Cambridge Nature Study Series

"For school use this is, without doubt, the best book yet published on the subject. The writer carefully describes the phenomena that should be observed, and he indicates how records of the observations should be kept."

The Journal of Education

The Foundations of Music.

By HENRY J. WATT, D.Phil., Lecturer on Psychology in the University of Glasgow. Royal 8vo. 18s net

"Dr Watt has written a really fine analysis of the psychological data of music. His study is based on the observed reactions to musical sounds; he endeavours to ascertain the psychological and physical equivalents to æsthetic rules, to show the meaning and justification, in this scientific sense, of such rules. The current confusion about such matters makes such an analysis very welcome, and Dr Watt is to be congratulated on the clear, patient, and thorough manner in which he has performed his task."

The Athenæum

A Selection of Cases Illustrative of English Criminal Law.

By C. S. KENNY, LL.D., F.B.A., late Professor of Law in the University of Cambridge. Fourth edition. Demy 8vo. 15s net

"There is probably no one else—at any rate no one in England—so well qualified for the task, through actual practical experience both of the working of the law and of academic teaching. . . . The book may with confidence be recommended to teacher and student, and may well interest a wider circle of readers."—*The Athenæum* on the first edition

Principles and Method in the Study of English Literature.

By W. MACPHERSON, M.A., Inspector of Schools to the Bradford Education Committee. New and enlarged edition. Crown 8vo. 5s net

The author's chief aim in this book, which is written from the teacher's point of view, is to show how English literature, as it appears in the work of the best writers, may be effectively studied and rightly appreciated. In this edition the number of pages contained in the first edition has been more than doubled, a large amount of new subject-matter having been added.

Douglas's Aeneid.

By LAUCHLAN MACLEAN WATT, M.A., B.D., F.R.S.E., F.S.A.Scot. Demy 8vo. 14s net

An attempt to elucidate Gawain Douglas's work and to place it in its proper setting as a literary document. The book will, it is hoped, fill a blank in Scottish literature. The author has taken the version of the Cambridge Manuscript as being the most authentic.

An Anglo-Saxon Reader.

Edited, with notes and glossary, by ALFRED J. WYATT. Demy 8vo. 12s 6d net

The editor has aimed at representing as many sides as possible of the life of our forefathers, and at choosing material of greater variety and of more intrinsic interest than that to be found in previous books. The notes are intended to hit the happy mean between the needs of the private student and those of the more fortunate class-student. The glossary is adapted to ready use, and is intended to give the learner all legitimate aid

Beowulf with the Finnsburg Fragment.

Edited by A. J. WYATT. New edition, revised, with introduction and notes by R. W. CHAMBERS. Demy 8vo. With 2 facsimiles. 12s net

A Study of Shakespeare's Versification,

with an inquiry into the Trustworthiness of the Early Texts, an examination of the 1616 Folio of Ben Jonson's Works, and appendices, including a revised text of *Antony and Cleopatra*. By M. A. BAYFIELD, M.A., formerly Head Master of Eastbourne School. Demy 8vo. 16s net

The author's object, which is frankly revolutionary, is to give an intelligible and consistent account of the structure of Shakespeare's dramatic verse, and to show that many thousands of lines of it are given in modern texts in a form that Shakespeare would have abhorred.

Cambridge Readings in Literature.

A series of Anthologies from Homer to Masfield; illustrated with reproductions of pictures by great masters, from Botticelli to William Orpen. Edited by GEORGE SAMSON. In five books. Crown 8vo. School edition. Book I, 3s 6d net, or in 2 parts, 2s net each; Book II, 3s 6d net, or in 2 parts, 2s 3d net each; Book III, 3s 6d net; Books IV and V, 4s net each

"Wide reading, humour, veneration, a sense of the magnificence of the universe, humanity, and fine taste have gone to the compiling of these books."—*The Nation*

Joel, Obadiah, Jonah, and Malachi.

By Rev. T. H. HENNESSY, M.A. Fcap. 8vo. 3s net. Revised Version for School Series

An Advanced Latin Syntax.

By A. L. FRANCIS, M.A., late Head Master, and H. F. TATUM, M.A., late Assistant Master, Blundell's School, Tiverton. Crown 8vo. 7s net

This work is an attempt to deal in a short compass with late and exceptional idioms of Latin, and to bring them into harmony with the principles of the language. It is based on Roby and Riemann, and the authors owe some debt to the notes in Papillon's Virgil, Duff's Juvenal, and other editions; but the whole of the plan and conclusions, as well as a considerable part of the argument and materials, are their own.

Catalogue 1920.

A copy of the new catalogue of the Cambridge University Press, based upon an improved system of classification and thoroughly revised, will be sent on application.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

also, delighted his hearers with an account of his observations in connexion with the recent solar eclipse and of their bearing on Einstein's theory. A full account of the meeting will appear in the next issue of the *School Science Review*.

THE GEOGRAPHICAL ASSOCIATION.

THE annual meetings of the Geographical Association were held at the London Day Training College, on January 9 and 10. The report showed an increase of 1,100 members and of several branches and new links with the Colonies.

Sir Charles Lucas, in his presidential address, opened out fresh lines of thought concerning islands as centres of preservation of human diversities and their relations to peninsulas, all in connexion with the development and fate of empires and commonwealths. He suggested that the giving of self-government to British Colonies and Dominions might be due to home experience of diversities within the British Isles and of the need for giving each group opportunities of development in its own way.

Dr. R. N. Rudmose Brown emphasized the development of the coal export trade from Spitsbergen, and estimated that next year 250,000 tons of coal would be shipped. He referred to the extra-territorial rights of British, Swedish, and Russian estates within the new Norwegian Dominion of Spitsbergen created by the Paris Conference.

The educational side was dealt with by Mr. T. W. F. Parkinson, who urged that the Board of Education should do more to encourage geography in the higher forms of secondary schools, and that more scholarships should be opened to students of geography. The discussions brought out references to the creation of a geographical Tripos at Cambridge, and the full recognition of geography in the faculties both of arts and of science by the University of Wales, as well as to the creation of an arts degree in geography (pass and honours) at Leeds and London. A demonstration of the value of the kinema in geographical teaching was given by Capt. C. E. Hodges. Mr. M. de Carle S. Salter (Superintendent of the British Rainfall Organization) gave an original paper on "Rainfall as a Geographic Function."

THE HISTORICAL ASSOCIATION.

THE fourteenth annual general meeting was held at the University of Leeds on January 1 to 3. Owing to the absence of the president, Prof. Tout was in the chair. At the business meeting Prof. Grant was elected president of the Association. The Secretary reported that between four hundred and five hundred new members had joined the Association since September last, and that new branches had been formed at Bangor, Dudley, Durham, Liverpool, Chelmsford, Norfolk, Oxford, Rugby, and Winchester. The Secretary also reported that almost a thousand members of the Association subscribed to the quarterly journal *History*. A paper was read by Sir Michael Sadler, K.C.S.I., on "The Influence of Western Education in India." A reception was given by the Lord Mayor and Lady Mayoress in the evening of the first day at the City Art Gallery. On January 2 visits were paid by different parties of members to the Leeds Parish Church and St. John the Baptist's Church, to Kirkstall Abbey and Adel Church (Norman); also to Messrs. Barran & Sons' clothing factory, and to the technological departments of the University. In the afternoon Lord Robert Cecil gave an address on "The League of Nations," dealing especially with the attitude of the American Senate on the question of reservations. In the evening a dinner was held at the University Refectory, attended by about a hundred members and friends. On January 3, Dr. Maud Sellers read a paper on "The Use and Abuse of Ancient Monuments and Civic Documents in Education," and laid stress upon the necessity of exercising discretion in choosing the right kind of curators and guides in museums and on the care and accessibility of historical documents. The paper prepared by Prof. Mantoux on "The Effects of the World War: A new stage in the history of the Industrial Revolution," was read by Prof. Grant owing to the inability of Prof. Mantoux to leave Paris.

MATHEMATICAL ASSOCIATION.

THE annual meeting of the Mathematical Association was held in the London Day Training College, the president for the year being Prof. E. T. Whittaker, F.R.S., of Edinburgh University. The Advanced Section of the Association met on January 7. The president gave a lecture on "Modern Methods of Computation," and dealt with the numerical solution of equations and power series by the methods of Lobachevsky and Graeffe. He covered a very wide field, and the paper was considered one of the most important that has been contributed to the Association, on account of the practical nature of the subject, its almost entire neglect by mathematicians and the difficulty of obtaining instruction in the

modern methods and processes of calculation in the Universities. It was also felt that, apart from its practical bearing, the subject of computation is the best introduction to abstract Function Theory.

The general meeting was held next day. At this meeting it was decided to hold a summer meeting of the Association in Leeds, in order to get into touch with a wider clientèle and also to study on the spot wider mathematical problems, such as the use of mathematics in textiles, commerce, engineering, &c. Mr. C. Godfrey, M.V.O., gave a lecture on "The Teaching of Geometry in Secondary Schools," and advocated the postponement of the severely logical and rigorous study of geometry until the university stage. As a first introduction to the subject, he advocated an extended course of practical and calculative geometry, to be followed by a more formal study of those propositions which seemed to the pupil to require a proof, such as Pythagoras' Theorem, &c., and to treat as intuitive these propositions which are evident from such considerations as symmetry. Prof. T. P. Nunn also was strongly of opinion that a more practical study of "similarity of figures" should be taken early in the geometrical course. Prof. E. H. Neville vigorously attacked the convention whereby displacements, forces, velocities, &c., are measured by positive numbers in unique directions, and maintained the opposite view that a proper vector has two directions, each as good as the other, and two amounts, each the negative of the other. Miss H. M. Cook, in a practical paper, opened a discussion on the place of common logarithms in mathematical training. Prof. W. P. Milne, of Leeds University, took occasion to point out the grave consequences in university teaching that arose from large bodies of students entering the intermediate classes without any knowledge of logarithms and numerical trigonometry. The afternoon session was opened by Prof. Whittaker, who dealt with several cases of mathematical problems awaiting solution. Following on this paper came a most able disquisition by Mr. R. C. Fawdry. After pointing out the great value of a training in mechanics, which requires both the application of mathematical processes and the handling of instruments and experiments, Mr. Fawdry confessed that, in spite of all his long experience, he still was in doubt as to whether statics or dynamics ought to be taught first to beginners. Dr. S. Brodetsky, Prof. W. P. Milne, and Mr. A. W. Siddons all entered vigorous protests against the current practice just instituted of allowing pure mathematics—entirely divorced from all practical applications—to be studied in the advanced courses of the secondary schools. They maintained that the widening of outlook from the conjoint study of mathematical processes with the problems of mechanics, electricity, optics, &c., was invaluable, and the feeling of the meeting as a whole was strongly in favour of what they said. One lady present averred that several women mathematical teachers belonged to her school who had no knowledge of natural phenomena whatever, but only the processes of the calculus and geometry, and that the effect on themselves and on their pupils was deplorable.

The meetings throughout were large and enthusiastic; the members separated expressing their intention to support by every means in their power the Leeds summer meeting.

MODERN LANGUAGE ASSOCIATION.

THE annual meeting of this Association was held at the College of Preceptors on January 8 to 10. Proceedings were opened by Sir Stanley Leathes, who delivered his presidential address on "Modern Languages and National Needs." He dwelt on the successful work of the Association and on progress in the teaching of modern languages; referred gracefully to the appointment of Prof. Okey and Prof. Prior at Cambridge; and proceeded to show many departments of the national life in which a knowledge of modern languages was desirable. He naturally made repeated reference to the Report of the Government Committee on Modern Languages, of which he was chairman; and especially urged the importance of school pupils learning one language thoroughly rather than two superficially. In the evening Mr. Alison Peers outlined a scheme for developing educational experiments; Prof. Nunn assured him of the willing co-operation of the Education Section of the British Psychological Society. On Friday morning there was a business meeting. The Hon. Treasurer was able to announce that the Association was financially in a sound condition, and the chairman declared that the number of members (1,338) constituted a record. In the afternoon Mr. Ripman opened a discussion on "Modern Languages at the First School Examination," which proved interesting and valuable. After tea there was a conference of teachers of Spanish, and an Italian lecture by Dr. Emilio Re, communicated by Mrs. Re-Bartlett; and a Spanish lecture was delivered in the evening by Señor de

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

Madariaga. These lectures were given by arrangement with the British-Italian League and the Anglo-Spanish Society. On the last day M. Emile Audra (Directeur des Etudes, Institut Français) lectured on "La Controverse soulevée en France par l' 'Essay on Man' de Pope." The meeting as a whole was stimulating and successful, but the attendance was not uniformly good, and some doubt was expressed as to the wisdom of separating from the joint conferences held at University College.

ASSOCIATION OF SCIENCE TEACHERS.

THE Association of Science Teachers held their fifteenth general meeting at University College, on January 5. After a short business meeting, the new president, Dr. Sophie Bryant, gave her presidential address on "Science and the Philosophy of Religion from an Educational Point of View." She showed the part that teachers of science are called upon to play in helping "to develop and classify the Philosophy of Religion for every man." Although at present the ideal of a complete philosophy is approached independently from two different points of view, yet the results of the study of science and of religion ought not to be in the final effect inconsistent the one with the other. This address was followed by a discussion on the Second School Examination and its relation to advanced courses in schools and to university examinations. Members present were agreed that the Second School Examination as set by the newer universities is too difficult to be taken in two years after matriculation, and they recommended that the standard should be less advanced. At the afternoon session, Mrs. Ayrton gave an interesting lecture, illustrated by experiments, on her Anti-gas Fan. The lecturer showed the models she had made and the ways in which she had improved them until she obtained the satisfactory instrument that had been used at the Front, where it had been found most efficient for clearing trenches and dug-outs from poisonous gas.

EDUCATIONAL HANDWORK ASSOCIATION.

THIS Association combined with the National Association of Manual Training Teachers in holding a conference on January 3. Prof. J. A. Green was in the chair. Papers were read by Dr. Ballard on "Tests of Practical Ability," and Mr. Stewart Taylor on "Handicraft and Science." Dr. Ballard described various motor tests—tapping, card-dealing, divided cube with painted surface, dissected pictures, &c. Perhaps because he had with him an instrument for recording tapping, this test received most attention, though it has very slight relation to intelligence and no relation to innate possibilities of craftsmanship. "We cannot measure higher faculties by measuring lower, and handwork involves both." The more promising researches of Gilbreth in motion study were briefly described. An interesting discussion followed, and though Dr. Ballard admitted that mental tests were not, so far, of any great use, it was, he urged, important to continue the study of such tests, as a practical outcome was often quite unforeseen in scientific inquiry. Mr. Taylor's paper was an interesting discussion of the difficult problem of the exact function of handwork in education. The "aloofness" of the manual "centre" was vigorously attacked. Such externality made it impossible for handwork to take its proper place as an organic element in the school life. Such attempts at correlation as he had seen offered a loose jumble of odds and ends in casual relationships, which gave neither dignity nor character to the subject or to the teacher in charge. A course in handwork must be progressive, both in difficulty and in intellectual outcome. If rightly worked out, it offered an excellent introduction to the fundamental principles of physical science, but the course must, above all things, take into account the daily experience and the outstanding interests of the boys. Some actual examples of the work done in Mr. Taylor's own school would have given point to what was nevertheless a stimulating communication.

TRAINING COLLEGE ASSOCIATION, AND COUNCIL OF PRINCIPALS OF TRAINING COLLEGES.

THE Training College Association were fortunate in securing the presence of the Master of Balliol at their afternoon meeting. In his address on "The Education of the Citizen," the Master followed the main lines of the report on Adult Education, but his delightful asides made the address well worth hearing, even to one who had read the report. In the morning Canon Blofeld, president of the Association, gave an excellent address on "Leisure"—a timely respite from nearly two hours of crowded work. It is understood that the question of salaries in training colleges, and especially their relation to secondary-school salaries, occupied much attention, and that more will presently be heard on this subject. Another matter that came up for consideration

was the existing arrangements for the student-teacher year, as to which representatives of the Head Masters' and Head Mistresses' Associations had conferred with representatives of the Training College Association. The weight of opinion was in favour of giving the same financial advantage to the student teacher, whether or not any time is spent in the elementary school, and of varying his or her relations to the elementary school, according to the needs of the individual case. Some of the best work of the Training College Association is now done in sectional meetings of the teachers of subjects, no fewer than a dozen such meetings having been held during conference week. We may add that, at a meeting of the Council of Principals, the crying injustice meted out to men who were students in 1914, and who were called up as Territorials in the fateful August of that year, was vigorously discussed. At present a grateful country is refusing to let their years of military service count for pension, and in most cases for salary increments.

THE WOMEN'S INTERNATIONAL LEAGUE.

THIS meeting, at which the subject discussed was "The Teaching of Languages and the Growth of Internationalism," was held on January 9. Mrs. Swanwick, who presided, said the League, from its great interest in education, was glad to have been allowed the privilege of organizing one of the meetings at the Teachers' Conference. An enormous mass of the people in every country, the speaker said, were idle-minded, and willing to give up their freedom and let other people do their thinking for them. A real, living educational system could combat this vice, but many of our systems encouraged it. A real League of Nations could only be formed by the mass of the people being educated to desire freedom and understanding and a share in the control of foreign policy.

Mr. Russell gave a general sketch of the aims, methods of work, and aspirations of the International Students' Bureau. He laid stress on the importance of paying attention to the psychology of language teaching and pointed out the great need for impartial research into methods of teaching and learning languages.

Mr. Palmer sketched the theories at the back of the methods employed by the Bureau, based on a combined study of psychology, linguistics, and methods of economizing time and effort; and leading up to the composing of a language course and to illustrations of some of the fascinating and ingenious card devices employed to help in the study of any language.

WM. HUNT'S OXFORD "IDEAL" LOOSE-LEAF EXERCISE BOOK.

(Patent.)

WM. HUNT'S Patent "Ideal" LOOSE-LEAF NOTE-BOOK constitutes the best and most convenient Higher Form and Science Class Exercise Book, Lecture Note Book, Loose-Leaf Scrap Book, Storage Covers for Notes, Letters and Papers of all sorts yet invented. The Book opens perfectly flat for writing, and binds up absolutely securely; can be un-made and re-made and the leaves transferred from one book to another or new leaves added in any manner without trouble and without risk of disarrangement or loss. No rings, posts, arches, or mechanism of any sort. Only one book necessary for many subjects, (each subject can be transferred to its own distinctive cover as convenient). 18 sizes and several qualities. Capacity one leaf or 300 with no waste bulk. "IDEAL" for preserving NOTES OF LECTURES and other matter in convenient and easily accessible form.

Showing the Book containing 300 sheets of paper closed. The Divisible Lace is here shown joined, by inserting the Pointed Tag into the Barrel Tag. When the Book is in use the Lace should be joined as above only. When not in use the lace ends may be tied in a bow knot. The Book automatically accommodates itself to any number of leaves, few or many, with no waste bulk.

Showing the manner of changing leaves. A leaf is shown withdrawn from one Divisible Lace before withdrawing it from the other.

FROM

Mr. HERBERT RUSSELL'S LIST.

A Scientific Geography. Book I. The World (Broadly Treated). By ELLIS W. HEATON, B.Sc., F.G.S. Crown 8vo, cloth. Price 3s. 6d. net.

This volume deals with the "Principles of Geography" (Oxford Locals), and contains all the "Physical Geography" required for the Cambridge Local Examination.

Environment: A Natural Geography.

By G. R. SWAIN, F.R.Met.S., Geography Master at the Manchester Warehousemen and Clerks' Schools. Crown 8vo, cloth 224 pp. Price 3s. 6d. net.

The World in Natural Regions treated under the following Sections:—

I. The Polar Regions. II. The Cool Temperate Regions. III. The Warm Temperate Regions. IV. The Hot Lands.

The primary aim is to show the intimate connexion between man and his geographical environment, and special attention is paid to the climatology, structure, and general physical condition of each region. The origin and development of towns are fully dealt with, and the influence of environment on plant and animal life is made a special feature.

Book Ways: A Readable History of English Literature.

By EDITH KIMPTON, M.A., A.K.C. New edition, with a prefatory letter by the late THEODORE WATTS-DUNTON. Crown 8vo, cloth, 236 pp. Price 3s. 6d. net.

"To cover the whole ground denoted by the term 'English Literature' in less than 300 pages is a feat that requires some ability. To do this, and at the same time make the book readable and interesting, requires more. This is what Edith Kimpton accomplishes in 'Book Ways.' Her book is a *multum in parvo*."—*The Scotsman*. "The aim has been to trace a natural sequence and prefer judicious extracts to mere categories of dates and names."—*Pall Mall Gazette*. "A little masterpiece."—THEODORE WATTS-DUNTON.

The Translation of French Unseens.

By EUGENE PERROT, B.ès L., Lecturer in French in the London County Council. Invaluable to Certificate and Matriculation Students. Crown 8vo, cloth, 187 pp. Price 3s. net.

The Essentials of French Grammar.

By ALFRED BARRIHALL, B.A., Vice-Principal of Westminster Training College. Crown 8vo, cloth, 236 pp. Price 3s. 6d. net.

French Composition.

By F. GUILLLOT, Agrégé de l'Université Licencié ès Lettres, Professeur au Lycée Charlemagne, Paris. H. PROIX, Professeur à l'Ecole supérieure, and J. B. SAY, Professeur d'Ecole Normale. Crown 8vo, cloth, 280 pp. Price 2s. 6d. net.

Inorganic Chemistry, both Practical and Theoretical, with Chemical Calculations and Graduated Questions. The best, latest, and cheapest textbook on the subject produced for the requirements of the University Locals. By S. W. BURNELL, LL.B., B.Sc., and A. J. DICKS, B.A., B.Sc. Crown 8vo, cloth, 379 pp. Price 4s. 6d. net.

Elementary Science.

By J. H. NANCARROW, late Head Master of Kingston Public School of Science, and Lecturer at the Richmond School of Science. Crown 8vo, cloth, 354 pp. Price 4s. net.

Provides a thorough grounding in the elements of Physics, Mechanics, Heat, Light, Magnetism, Electricity, Chemistry, &c.

Plant Study in School, Field, and Garden.

A textbook on Rural Science and Gardening. By J. S. BRIDGES, B.Sc., F.C.S., and A. J. DICKS, B.A., B.Sc., F.L.S., Head Master of Walthamstow County Secondary School. Crown 8vo, cloth, 432 pp. Price 4s. 6d. net.

This Botany textbook is of an experimental nature and free from difficult terms and Latinisms. Practical exercises and a summary appear at the end of each chapter. The book is profusely illustrated with over 600 original drawings.

Concurrent Practical and Theoretical

Geometry. By W. J. POTTER, M.A. (Cantab.), Published in Three Parts. Part I, 2s. 3d. net; Part II, 2s. 6d. net; Part III, 3s. net. Detailed Prospectus post free on application.

Answers to the numerical and graphical examples in Parts I to III. Price 1s. net.

A Digest of British History. By S. H. McGRADY, B.A. With an Introduction by OSCAR BROWNING. Crown 8vo, cloth, 320 pp. Price 3s. 6d. net.

A History note-book on original lines, the great movements, trends, and developments being logically traced, and their influences being clearly shown.

Also published in three parts as under:—

Part I.—B.C. to 1485. Part II.—1485 to 1789. Part III.—1789 to 1912. Price 1s. 4d. net each.

OXFORD AND CAMBRIDGE LOCALS AND LONDON UNIVERSITY SCHOOL EXAMINATIONS

A Selection of Suitable Class Books.

MATHEMATICS AND SCIENCE.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. **3s. 6d.** With Answers, **4s.**
"A useful class book for beginners."—*Schoolmaster*.

Algebra, The School. (Matriculation Edition). By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. **5s. 6d.**
An edition of the *School Algebra* covering the requirements of London University Matriculation.
"As a school text-book this volume has much to recommend it, the examples and test papers being carefully chosen."—*Mathematical Gazette*.

Arithmetic, The Junior. By R. H. CHOPE, B.A. **Third Edition.** With or without Answers. **3s. 6d.**
"The book has our fullest appreciation."—*Schoolmaster*.

Arithmetic, The School. By W. P. WORKMAN, M.A., B.Sc. **Second Edition.** **4s. 6d.** In two Parts. Part I. **2s. 9d.**; Part II. **2s. 9d.**
"The best arithmetic for schools on the market."—*Mathematical Gazette*.

Botany, The Junior. By FRANCIS CAVERS, D.Sc. **3s. 6d.**
"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.
"Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

Botany, The Senior. By FRANCIS CAVERS, D.Sc. **Second Edition.** **5s. 6d.**
"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purpose underlie the manifold variations which plants assume."—*Nature*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. **Second Edition.** **3s. 6d.**
"A thoroughly sound course of practical instruction."—*Nature*.

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. **Second Edition.** **5s. 6d.**
"The ground is well covered on experimental lines. There are questions to every chapter and a section on chemical calculations."—*Guardian*.

Chemistry, Senior Practical. By H. W. BAUSOR, M.A. **3s. 6d.** Including preparations, experiments on action of heat, quantitative and qualitative analysis.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. **3s. 6d.**
"Satisfactory in plan and treatment and useful in scope."—*Educational Times*.

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. **New Edition.** **5s.** Covers the ground of Euclid I-VI.
"One of the best books on modern lines."—*Oxford Magazine*.

Geometry, School (Matriculation Edition). By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. Covers fully the syllabus for London University Matriculation. **4s. 6d.** Covers the ground of Euclid I-IV.

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. **2s. 9d.**
"A good practical course. The diagrams are very clear."—*Schoolmaster*.

Heat, Senior. By DR. STEWART and DR. SATTERLY. **4s.**
"The information is accurate and up-to-date."—*The Journal of Education*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. **3s. 6d.**
"Should not have any difficulty in holding its own, for it is one of the best regarded from the standpoint of exact thinking."—*Electrical Engineering*.

Magnetism and Electricity, The School. By R. H. JUDE, D.Sc., M.A. **4s. 6d.**
"From first to last there is an originality of treatment which makes it interesting reading. . . . It has given us great pleasure to read through it."—*Nature*.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. **3s. 6d.**
"The book possesses all the good qualities of its fellows."—*Schoolmaster*.

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C. **Second Edition.** **3s. 6d.**
"A really good two years' course in Physics and Chemistry."—*Secondary School Journal*.

Sound and Light, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **5s.**
"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary physics."—*Nature*.

LANGUAGES, HISTORY, AND GEOGRAPHY.

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. **2s.**
"Makes plain for the young pupil the essentials of good writing."—*Education*.

English Composition, Senior Course of. By E. W. EDMUNDS, M.A., B.Sc. **Second Edition.** **3s. 6d.**
"Excellent devised and arranged."—*School World*.

English Course, The Matriculation. By W. H. LOW, M.A., and JOHN BRIGGS, M.A. **Third Edition.** **4s. 6d.**
"Admirably fulfils its purpose. The chapters on precis-writing and indexing are excellent."—*Westminster Review*.

English Grammar, Junior. With Parsing and Analysis. By A. M. WALMSLEY, M.A. **Second Edition.** **2s.**
"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association*.

French Course, New Junior. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. **3s. 6d.**
"The book becomes a serious rival to those existing."—*Schoolmaster*.

French Course, Senior. By Professor WEEKLEY, M.A., and CLAUDE GILLI, B.A. **4s. 6d.**
"A model of clearness and simplicity."—*The Journal of Education*.

French Essays, Matriculation. (Free Composition.) By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. **2s.**
"A serviceable and well-graded book."—*School World*.

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. **2s. 9d.**
"The co-operation of a French and an English edit has produced the happiest results."—*The Journal of Education*.

French Reader, Senior. With Introduction, Notes, and Vocabulary. By R. F. JAMES, B.A. **3s. 6d.**
"This is a splendid reader."—*Schoolmaster*.

Complete Educational Catalogue, and Catalogue of Class Books for the Oxford and Cambridge Locals, the Higher School Certificate, and London University Matriculation Examinations, post free on application.

Latin Course, Senior. By A. J. F. COLLINS, M.A., and ALFRED ROBINSON, B.A. **4s. 6d.**
"The book is business-like and well arranged."—*Guardian*.

Saturdays, 11.30 a.m. to 1 p.m., and 2 to 3 p.m.
When possible, special appointments should be
arranged.

Registrar—Miss ALICE M. FOUNTAIN.

The Association of University Women Teachers.

108 VICTORIA STREET (1st floor), S.W.1.
Requires Teachers and Lecturers. Teachers,
with University qualifications, requiring posts in
Public or Private Schools, are invited to apply to the
Secretary—Mrs. B. BROUGH. Subscription 5s. per
annum. Tel.: VIC. 2483.

THE COLLEGE OF PRECEPTORS

Incorporated by Royal Charter

BLOOMSBURY SQUARE, LONDON, W.C.1

The Summer Examination of Teachers for
the Diplomas of A.C.P. and L.C.P. will be
resumed on the 3rd of August, 1920. The
Examination will be held at Birmingham,
Bristol, Cardiff, Dublin, Leeds, Liverpool,
London, Manchester, and Newcastle-on-Tyne.
The Regulations may be obtained from the
Secretary.

Examinations for those who desire to
satisfy the preliminary requirements of the
Law Society, the General Medical Council,
the Conjoint Board of the Royal Colleges of
Physicians and Surgeons, the Pharmaceutical
Society, and other bodies, are held four
times a year, viz., in March, June, Sep-
tember, and December, in London and at
provincial Centres in England, Wales, and
Scotland. The Regulations may be ob-
tained from the Secretary.

Truman & Knightley

SCHOLASTIC AGENTS—LTD—

SCHOOL TRANSFER DEPARTMENT.

Ladies and gentlemen seeking partnerships in or to take over schools of their own should communicate personally with **Mr. TRUMAN**, who has had a large experience in the conduct of negotiations connected with the transfer of schools, and who is in a position to offer expert advice and assistance to purchasers, to whom no charge is made. He regards an efficient private school as a sound and remunerative investment at the present time.

Messrs. TRUMAN & KNIGHTLEY beg to call attention to the following openings in **Girls' Schools** which they have been called upon to negotiate:—

SCOTLAND.—Old-established Day School for girls: average gross income £3,200, net income £1,050; excellent premises. £4,000 required for premises, goodwill, furniture, &c., half of which could be paid off by instalments.—T 3099.

LANCASHIRE.—Private High School for girls with Kindergarten and Preparatory Class for boys, containing about 90 day pupils, producing nearly £1,000 a year. £300 asked for goodwill and school furniture, or offer.—T 2,968.

HOME COUNTIES.—Preparatory School for boys and girls, containing 12 boarders paying from £75 to £90 per annum, and 40 day pupils paying from 75 to 21 guineas per annum, exclusive of extras. Gross receipts about £1,500. Excellent premises in 6 acres. Goodwill £500, furniture at valuation.—T 2,504.

SURREY.—Principal moving away with her boarders wishes to dispose of her connexion of 30 to 40 day girls paying 18 to 36 guineas per annum. Gross receipts from day pupils between £1,200 and £1,500. Rent of premises, with accommodation for about 30 boarders, £300. One term's fees accepted for goodwill. Would be willing to receive vice-principal with a view to succession, if desired.—T 3,086.

SOUTH COAST.—Head Mistress required for High-class Boarding School being taken over by a private company: 60 boarders at fees of £100 to £120 per annum; first-rate premises specially built for their purpose in 5 acres of grounds. The Head Mistress's remuneration would be partly fixed, and depend partly on profits. Candidates should be able to invest at least £500 in shares, which should pay a dividend from 10 to 15 per cent.—T 3,058.

WEST OF ENGLAND.—High-class Boarding and Day School containing 15 boarders paying fees from 80 to 90 guineas per annum, and 47 day pupils paying from 12 to 30 guineas per annum; gross receipts about £3,000 a year. Goodwill £950; furniture could either be taken at valuation, or would be let with the house at £180 per annum.—T 2,502.

YORKSHIRE.—High-class Boarding and Day School containing over 100 boarders at fees from £60 to £72 per annum, and 20 day pupils paying 15 to 18 guineas per annum; gross receipts over £9,000. Would make suitable arrangements with a capable lady qualified to run a large Boarding School and able to pay down from £1,500 to £2,000.—T 3,063.

NEAR LONDON.—Partner, or Senior Mistress with a view to partnership, required in high-class Boarding and Day School for girls, containing 31 boarders paying from 90 to 99 guineas per annum, and 65 day pupils paying 12 to 21 guineas per annum. Gross receipts about £6,000, net profit about £1,200. Applicants should be University women, or, if not, capable of taking entire charge of the domestic side of the school.—T 3,066.

BERKSHIRE.—Good class Church of England Boarding and Day School, containing 16 boarders paying from £60 to £75 per annum, 9 day boarders paying from 18 to 24 guineas per annum, and 7 day pupils paying from 9 to 15 guineas per annum; gross receipts over £1,400, net profit £355. £1,000 required for goodwill and furniture, half of which could be paid off by instalments. School being sold owing to death of Principal. Excellent prospects for development.—T 3,098.

SOUTH COAST.—Partner, with view to early succession, required for a successful high-class Boarding School, containing 46 boarders paying average fees of £105 a year. Excellent premises standing in large grounds, the property of the Principal, who is prepared to let them to her successor. Gross receipts between £3,000 and £4,000; net profit about £700. Favourable terms offered to a suitable partner who is qualified to run the educational side of the School, and who could, if desired, join as Head Mistress at £150 per annum in the first instance.—T 1,069.

IRELAND.—High-class School for daughters of professional men: 36 boarders paying fees from £50 to £90 per annum, 60 day pupils paying from £6 to £30 per annum; gross receipts £3,600, net profit nearly £1,000 a year. Reasonable terms made with suitable successor, who must be an Evangelical Churchwoman. Part of purchase money could be paid off by instalments.—T 2,538.

HOME COUNTIES.—Boarding House in connexion with Public High School, containing 45 boarders paying from 60 to 66 guineas per annum, in addition to tuition fees; gross receipts £2,000 a year, producing a satisfactory profit. £1,000 required for goodwill and a certain amount of furniture. Part of the purchase money could be paid off by instalments.—T 3,078.

WEST OF ENGLAND.—Well established Boarding and Day School containing 17 boarders paying from 60 to 75 guineas per annum, and 33 day pupils paying from 12 to 21 guineas per annum, who are all girls of a good class. Gross receipts nearly £2,000 a year, net profit between £300 and £400 a year. Goodwill £700, furniture at valuation.—T 3,084.

SOUTH COAST.—Preparatory School for girls and little boys containing 10 boarders, paying from 70 to 90 guineas per annum, and 26 day pupils paying from 18 to 30 guineas per annum. Term's fees accepted for goodwill, furniture at valuation.—T 3,071.

LONDON.—Day School of the highest class containing 80 to 100 pupils; gross receipts over £3,000, net profit over £1,000 per annum. Goodwill £2,000, furniture at valuation. A partner would be received with a view to succession, and part of the purchase money could be paid off by instalments.—T 3,072.

BUCKS.—High-class Boarding School on Chiltern Hills containing 32 boarders paying £115 to £120 per annum exclusive of extras; gross receipts over £3,000, net profit between £600 and £700. Magnificent freehold premises in grounds of six acres. Price of freehold £10,000, a large amount of which could remain on mortgage. Satisfactory terms could no doubt be arranged with a suitable lady who is able to put down from £3,000 to £4,000.—T 3,106.

LONDON.—Good-class Day School with Kindergarten and House of Residence for students: 96 day pupils paying from 9 to 18 guineas per annum, exclusive of extras, and 14 students paying from 60 to 90 guineas per annum for board and residence; gross receipts over £3,000, net profit over £900. Entire goodwill £1,200, furniture at valuation. Principal willing to negotiate with suitable lady or ladies able to pay down from £500 to £1,000.—T 3,111.

IRELAND.—Assistant required to Principal of Gymnastic Institute in one of the largest cities in Ireland. A salary of £100 per annum with board and residence and bonus offered in the first instance to a lady who could succeed the Principal in a year or two's time, paying for goodwill, gymnasium and fittings, £650. Excellent opening for a well trained Gymnastics Mistress.—T 3,114.

LONDON.—Lady required to open a boarding house in connexion with a Public Day School in good residential suburb of London. About 25 boarders available, paying from 60 to 66 guineas per annum. Applicants should be able to furnish a large house for this number of Boarders.—T 3,112.

Messrs. TRUMAN & KNIGHTLEY have also a limited number of openings for investment in Boys' Schools.

All communications and inquiries are treated in the strictest confidence.

RECENT PUBLICATIONS

St Paul. His Life, Letters, and Christian Doctrine.

By A. H. MCNEILE, D.D., Regius Professor of Divinity in the University of Dublin. Crown 8vo. With 3 maps. 10s net

"The Christianity of to-day," says the author, "is broadly speaking the Christianity of St Paul. The influence which he has exercised on the hearts and lives of men is unequalled by any other writer in the world's history." The book is intended to form an introduction to larger works on the subject by gathering together in a small compass the best that has been written concerning the apostle in recent years.

Joel, Obadiah, Jonah, and Malachi.

By Rev. T. H. HENNESSY, M.A. Fcap. 8vo. 3s net. Revised Version for Schools Series

Seven Spiritual Songs (of Shakespeare's Time).

Words and Music by THOMAS CAMPION, M.D., 1567-1620. The words edited by W. H. DRAPER, M.A., Master of the Temple; the music arranged by WILLOUGHBY H. WILLIAMS, Organist of Leeds Parish Church. Words and music, 2s 6d net; for choirs, 20 copies for £1 net. Words only, 3d net; 100 copies, 6s net

This selection of songs is suitable for school choirs, and exemplifies with new emphasis some of the riches of English music.

An Anglo-Saxon Reader.

Edited, with notes and glossary, by A. J. WYATT. Demy 8vo. 12s 6d net

The editor has aimed at representing as many sides as possible of the life of our forefathers, and at choosing material of greater variety and of more intrinsic interest than is to be found in previous books. In the notes he has endeavoured to hit the happy mean between the needs of the private student and those of the more fortunate class-student. The glossary is adapted for ready use, and is intended to give the learner all legitimate help.

Beowulf with the Finnsburg Fragment.

Edited by A. J. WYATT. New edition, revised, with introduction and notes by R. W. CHAMBERS. Demy 8vo. With 2 facsimiles. Second impression. 12s 6d net

Principles and Method in the Study of English Literature.

By W. MACPHERSON, M.A., Inspector of Schools to the Bradford Education Committee. New and enlarged edition. Crown 8vo. 5s net

The author's chief aim is to show how English literature, as it appears in the work of the best writers, may be effectively studied and rightly appreciated. In this edition the number of pages contained in the first edition has been more than doubled, a large amount of new subject-matter having been added.

Cambridge Readings in Italian Literature.

Edited by E. BULLOUGH, M.A., Fellow of Gonville and Caius College, Cambridge. Crown 8vo. 8s net

The period covered by these Readings extends from the end of the eighteenth century to the beginning of the War, it being the editor's desire to present a picture of Italian thought in the nineteenth century. The book is divided into five sections:—Dio, Natura, Italia, Vita, Pensiero. A prospectus giving fuller details will be sent on application.

An Advanced Latin Syntax.

By A. L. FRANCIS, M.A., late Head Master, and H. F. TATUM, M.A., late Assistant Master, Blundell's School, Tiverton. Crown 8vo. 7s net

This work is an attempt to deal in a short compass with late and exceptional idioms of Latin, and to bring them into harmony with the principles of the language. It is based on Roby and Riemann, and the authors owe some debt to the notes in Papillon's Virgil, Duff's Juvenal, and other editions; but the whole of the plan and conclusions, as well as a considerable part of the argument and materials, are their own.

A Short History of Education.

By J. W. ADAMSON, Professor of Education in the University of London. Demy 8vo. 12s 6d net

"This is a book to read and re-read. We know of no other work that supplies in so short a space so much of interest to all who are in any way concerned with the work of education. . . . In giving a succinct account of the past history of education Professor Adamson has done a great service to the community."—*Education*

Euclid in Greek.

Book I. With introduction and notes by Sir THOMAS L. HEATH, K.C.B., K.C.V.O., F.R.S., Sc.D. Crown 8vo. 10s net

The editor has long been of opinion that, if the study of Greek and Euclid be combined by reading at least part of Euclid in the original, the two elements will help each other enormously. He puts the book forward in the confident belief that many will in this way come to read Euclid with more zest and more profit.

The Elements of Analytical Conics.

By C. DAVISON, Sc.D. Crown 8vo. 10s net

The range to be covered by an elementary textbook of analytical conics is not as yet defined. The author has excluded the general equation of the second degree and all more advanced branches of the subject. The more important properties of the conic sections are proved analytically, and rectangular coordinates are used for the most part. The exercises in the text are numerous.

Collected Scientific Papers.

By JOHN HENRY POYNTING, Sc.D., F.R.S., Mason Professor of Physics in the University of Birmingham. With Portrait and Memoirs. Royal 8vo. 37s 6d net

Machine Drawing for Electrical Engineers.

A Textbook forming an introductory treatise on the construction of Electrical Machines and Apparatus. By E. BLYTHE, A.M.I.Mech.E. Oblong folio. With 48 plates. 20s net. Cambridge Technical Series

Notes on Magnetism.

For the Use of Students of Electrical Engineering. By C. G. LAMB, M.A. Demy 8vo. Paper covers. 5s net

Examples in Heat and Heat Engines.

By T. PEEL, M.A., University Demonstrator in Engineering, Cambridge. Demy 8vo. Paper covers. 5s net

Chemistry for Textile Students.

A Manual suitable for Technical Students in the Textile and Dyeing Industries. By BARKER NORTH, A.R.C.Sc., F.I.C., assisted by NORMAN BLAND, M.Sc. Demy 8vo. With 100 text-figures. 30s net. Cambridge Technical Series

This work is, it is believed, the first to put forward an adequate course of organic and inorganic chemistry, on sound scientific lines, suitable for the large and growing number of students who are taking up the technical study of textile industries.

A Course of Practical Chemistry for Agricultural Students.

Volume I. By L. F. NEWMAN, M.A., Fellow of St Catharine's College, Cambridge, and H. A. D. NEVILLE, M.A., B.Sc., Professor of Agricultural Chemistry, University College, Reading. Crown 8vo. 10s 6d net

This volume deals with the chemistry and physics of the soil: Volume II, of which Part I has already been published (5s net), deals with the chemistry of foods. The exercises are designed to illustrate essential points and require the minimum of apparatus.

Physiology of Farm Animals.

By T. B. WOOD, C.B.E., F.R.S., and F. H. A. MARSHALL, Sc.D. Part I, General. By F. H. A. Marshall. Demy 8vo. With 105 illustrations. 16s net

This book is intended primarily for students of agriculture who may wish to obtain some knowledge of the simpler physiological processes as they occur in farm animals. It should also be of use to veterinary students.

An Introduction to the Study of Cytology.

By L. DONCASTER, Sc.D., F.R.S., Derby Professor of Zoology in the University of Liverpool. Demy 8vo. With 24 plates and 31 text-figures. 21s net

While giving an account of the more important facts of animal cytology, the chief purpose of this book is to interest the student in the subject by pointing out some of the ways in which cytological investigation is related to the great fundamental problems that lie at the root of all biological research.

OCCASIONAL NOTES.

THOUGH we stand for the rights of the teaching profession, we are unable to agree entirely with our contemporary, *The London Teacher*, in its attack upon the London County Council for inviting "social workers, persons experienced in commerce or industry, army instructors, and other persons not holding the usual professional qualifications," to apply for posts as assistant teachers in day continuation schools. For one thing, it is obvious that there are not, and for a long time there will not be, enough trained teachers to go round; and to transfer teachers from the existing schools to those of the new type would only be robbing Peter to pay Paul. But, more than that, the one thing we are sure about with reference to the day continuation schools is that they must be of widely different types, to suit all sorts, from the highly respectable engineering apprentice or junior clerk down to the adolescent denizen of the slums. It is casting no slur upon the orthodox teacher, whether primary or secondary, to say that in a large proportion of the new schools his conventional chalk-and-duster methods—which, indeed, have not been a conspicuous success with some boys between twelve and fourteen—would, in a large proportion of cases, break down utterly with boys between fourteen and eighteen. A fresh orientation, marked by bold experiments, seems to us inevitable, until the new branch of the profession becomes properly organized.

AT the Pelman Institute there now exists a Laboratory of Applied Psychology, the main function of which appears to be the correlation between capacity and voca-

Pelmanism and Vocation.

tion. It has just issued two prospectuses: one, "Choosing a Vocation by Scientific Methods," the other, "Choosing Employés." The claim is that psychology has now become a practical and applied science, and that by laboratory work it can supply definite guidance in choosing a vocation and also in choosing suitable persons to do particular kinds of work. At the laboratory, tests have been invented that differ from the ordinary Binet and other forms by taking account of the circumstances in which intelligence is to be applied. We have no information about the exact nature of the new tests, but they are evidently on the lines of those used in the American Army, and are, therefore, quite likely to prove efficient. Many parents and employers will no doubt be willing to pay the fees for advice in choosing occupations for their children or employés for their establishments. The general value of intelligence tests is now acknowledged, and the time has come for the extension of the system to the needs of business and industrial life. There is need for research in this direction, and by and by the general public will no doubt get the benefit of the investigations at present being carried out in the interests of a business firm. It will not be by any means the first time that a lead in educational development has been given by an institution conducted for private profit.

THERE has been a threat of a strike of teachers in the Rhondda Valley consequent upon the action of the education authorities in dismissing all married women from their posts as teachers in the elementary and higher elementary schools. Where this has been done to enable a man who has been to the war to resume his post, not a word can be said against it; but, where married women are dismissed and their places taken by unmarried women or by new men, the step is surely retrograde. Efficiency should be the test of employment. If a woman, married or not, is more efficient than a male competitor, he should be turned down, and *vice versa*. But to say that no woman shall marry and be a teacher is one of the most absurd regulations of committees formed of men who have little knowledge of teaching or of human nature. A married woman must, from the nature of the case, know more of the management of children than a spinster. If she has to be absent occasionally when she is adding future citizens to the State, ought not every capable teacher to have a grace term at times? And what better mothers can there be than those engaged in teaching the young? How many of our leaders in thought have been the sons and daughters of schoolmasters or clergymen, whereas now, if a woman devotes herself to teaching, she is vowed to celibacy no less than the novice on taking the veil. If a schoolmistress could marry and continue her work, she would be less likely to remain single, although her chances of meeting her future husband are small, considering how full of teaching her days are and her nights of correction and preparation. The London County Council has set a bad example in refusing to employ married women, and given provincial councils an excuse for their unwise action.

IN a recent interesting report of the Military Education Committee of the University of London, which has been sent to the Secretary of State for War, the re-

The Future of the O.T.C.

commendation is made that the present junior division of the Officers' Training Corps at schools should not form part of such corps, but should be given a distinct name and organization. The Committee consider that the name should be reserved for such corps at the Universities, who should form a unit, or units, of the Territorial Force. They think that there is some danger of the O.T.C. being lowered in public esteem by the fact that boys of thirteen and fourteen can be enrolled in some school O.T. Corps. But it would lower the prestige and check the progress of the school corps if the connexion between the O.T.C. of the schools and the Universities were severed, even in name. The objection raised by the London O.T.C. might be met by a general rule, which already obtains in some schools, that no boy shall join a school O.T.C. unless he is fit to bear arms and has reached the age of fifteen. Before that age, most boys at any rate might with great advantage receive the boy scout training, which would render them later more valuable members of an O.T.C. It is unwise to put young boys through too much military drill; the scout work develops their intelligence and activities in a way more suitable to their age. With older boys and young men military training can be made highly interesting and a means of mental as well as physical development. The proposal to make the University O.T.C. a branch of the Territorial Force is well worthy of consideration by the War Office.

THE Board of Education have appointed April 1 next as the day from which Section 18 of the Education Act, 1918, shall take full effect. In consequence,

Medical Inspection in Secondary Schools.

the medical inspection of all children attending secondary schools provided by a local education authority becomes compulsory. The experience derived from the inspection hitherto carried out in secondary schools has shown that many children suffer from defects that have been overlooked even by parents exercising an ordinary degree of care. It has long been a complaint at the universities that many youths coming up from the schools—especially scholarship holders from the county schools—present an inferior physique in part due to defects which could have been largely ameliorated had they been taken in hand in time. Though facilities have been created in most areas for the treatment of children from elementary schools, there have been difficulties in the way of treatment for children from secondary schools whose parents cannot afford the fees of medical practitioners. The hospitals in most areas were overpressed, even before the war, while secondary-school pupils were not eligible to attend at the clinics established by the local authority. Now, however, local authorities have the power to provide for secondary-school pupils in the same manner as for their fellows from the elementary school. This new enactment will prove a boon to many parents whose children had been to some extent penalized in health as a result of educational promotion. The 1918 Act applies the Medical Treatment Act of 1909, so that a charge may be made in other than necessitous cases. Under these conditions, no parent need hesitate on moral grounds to avail himself of the facilities thus offered.

THE important work of Juvenile Organizations Committees is the subject of an interesting pamphlet

Juvenile Organizations Committees.

just issued by the Board of Education, entitled "Notes on Work and Progress of Local Committees." The Central Committee, which was transferred to the Board of Education from the Home Office in October last, has considered certain general questions, the chief of which has been that of future policy under the Education Act of 1918. But, of course, the detailed work falls to the local committees, of which 120 are now in existence. A circular was issued in November last, asking for short reports from these committees, it being felt that the information thus gathered "might prove to be both stimulating and useful to all committees whose problems, though differing in degree, are largely the same in character." The pamphlet to which we have referred contains reports from eighteen provincial and six London committees, and it is hoped during the year to give some review of the work of all the rest. In perusing the reports, one is pleased to find evidence of co-operation between local education authorities and voluntary organizations, and of the united efforts of teachers, clergy, and trade societies to promote the recreative and social interests of young people. In some of the larger towns useful handbooks of boys' and girls' organizations have been published. It is clear that a great deal of useful work, by way of co-ordination and extension, is being done by the local committees.

DISCUSSING the question raised by Section 36 (1) of the Education Act, which provides that it shall not be obligatory on County Councils to charge on particular areas any portion of capital expenditure, the Lancashire Education Committee make some useful observations. On the educational side they are convinced that, in view of the new Act, the change will simplify administration and will ensure that school provision is made where it is most needed. Financially, it is said, many heavily rated areas will receive substantial relief, although, generally speaking, a small increased burden would be laid upon those districts which have not hitherto been subject to special rating. The Committee have therefore recommended the County Council to abolish special area rating for elementary education. From an incomplete return, the position is now as follows:—41 county areas: 14 authorities have decided to abolish special area rating, 14 have decided to continue the system in operation under the Act of 1902, and 13 have the matter still under consideration.

Special Area Rates.**Advisory Committees.**

THE Staffordshire Education Committee have adopted a scheme for the establishment of a Joint Advisory Committee, consisting of their own members and representatives of the teachers in their employment. The two interests are to appoint six members each, and the chairman of the Education Committee is to be chairman of the Advisory Committee. The subjects to be discussed include all questions affecting the relations of the authority and its teachers, and, subject to due notice, a member may have special subjects placed on the agenda as may be referred to the Committee by the authority or by the Staffordshire Association of Teachers. The recommendations of the Advisory Committee will be submitted to the General (Education) Sub-Committee.

WE have been favoured with a copy of a draft scheme prepared for an administrative county in accordance with the suggestions for the arrangement of schemes issued by the Board of Education. The

Schemes.

information collected and presented in this comprehensive document is no doubt of value for the purposes of reference, but its perusal is not inspiring. We may be permitted to express the hope that local authorities generally will not invariably attempt to arrange their schemes in accordance with the elaborately tedious directions of Circular 1096. The Education Act of 1918 imposes upon authorities the duty of co-operating in the establishment of a national system of public education available for all persons capable of profiting by it, and of providing for the progressive development of facilities in the areas for which they are responsible. But, subject to statutory requirements, there is no reason why there should be a dull uniformity of procedure throughout the country. We desire to see each authority state their problems from their own point of view, and evolve solutions appropriate to the circumstances and conditions of the particular areas with which they are concerned.

BY the coming into force of Section 20 of the Education Act, it becomes the duty of local education authorities to ascertain which children in its area are defective or epileptic, and to make suitable provision for their education. Per-

The Education of Cripples.

missive powers existed under the Education Act of 1899, but they were ignored by all but a few of the larger authorities, with the result that many children of bright intelligence, who by reason of their physical disabilities were even more in need of educational help than their normal fellows, were deprived of such aid. Orthopædic surgeons and societies interested in the care of the cripple have long been asking for assistance. It has been pointed out that many children lay in the wards of special hospitals for weeks at a time immobilized yet able to learn, while others during long periods of convalescence wore such supporting apparatus, or were so affected, as to be unable to attend ordinary schools with safety. Provision for the treatment of the tuberculous child has now been assured by law, and there is reason to hope that help will soon be extended to all crippled children, since the present Act affords provision for their much needed education. Co-operation between surgeons and educationists is needed to secure continuity both in treatment and education. Such arrangements as exist under the Manchester and Liverpool authorities, or the plan (adopted in London and Birmingham) of sending teachers into certain hospitals, should be extended to the whole country. Unfortunately under the Act, save in the case of London, there is no compulsion to provide boarding schools either for defective or epileptic children until seven years after the appointed day. When the time comes, educationists must see that no child capable of receiving education is overlooked in hospitals, and surgeons should create such a public opinion that no cripple child who could be relieved by treatment should be allowed to remain untended. The local authorities have the power, and a healthy public opinion will some day enforce their application.

THE Annual General Meeting of the Association of Teachers of Drawing will be held at Clifton Hill School, New Cross, S.E.14, on Wednesday, March 24, at 6.30 p.m. It is proposed to hold an exhibition of children's and students' work on the same evening.

THE REV. DR. EDMOND WARRE.

IT has long been an article of faith among those who knew Dr. Warre best that he could not have failed to make a great name for himself in any position which he had chosen to adopt. At the Bar, or in the Army, in which he had so close an interest, he must, it appeared to them, have played as prominent a part as fell to him in fact in the life of the public schools of England. This is no doubt to say that his success was that of a strong personality rather than that of an educational expert. His best work was done before educational theory in England had become a matter of public discussion and general interest, and, if he lived to see some of his reforms grow out of date and to be regarded as a conservative force, it must not be forgotten that this was one of the penalties of his long life, and that in his prime he was pre-eminently a great and strong reformer.

It is impossible to exaggerate Dr. Warre's influence on the ordinary routine of school life at Eton: when he first became Head Master he reorganized it from top to bottom, and constructed a very intricate and ingenious time table, a tremendous task in those days, and one which he accomplished almost unaided. He did much to make idleness less possible, and the system of examinations which he introduced then did much to raise the standard of work among the less intelligent boys in the school. It is probable that he did less for the cleverer boys, who had in many cases profited greatly by the larger liberty of early days. But no systems can suit all degrees of intelligence, and he was the last to undervalue a wide liberty for boys, both in school and out of it. As a teacher he was perhaps too didactic for his abler pupils, and insisted on an elaborate system of note-taking which sometimes went against the grain. He was liable to indulge in somewhat lengthy dissertations, and his method of approaching the Classics was in some respects old-fashioned, but no boy who was in his Division failed to admire and respect him, and that is in itself no mean tribute. His wealth of classical quotation, his width of interest, as real in agriculture and sport as in military history or philology, was in itself a revelation of thoroughness by which none could fail to profit. His visits to other Divisions were always an event recalled by small boys with alarm, no doubt, but also with interest and appreciation for the kindness which never failed to make itself felt. There was about him a certain grand simplicity which impressed boys even while they criticized.

But it was as an organizer rather than as a teacher that he left his mark on school life. Nothing that boys did was alien to him, and his interest in the development of their games, the creation of a Volunteer Corps, the provision of playgrounds, the establishment of the School Mission, the erecting of the buildings necessary for the school life, were facts which none who knew Eton can ever forget. Everything that he did or planned was on a large scale, bearing the mark of his own largeness both of mind and body. He was not always fortunate in his choice of architects, but he liked the solid and the real in buildings as much as in men, and when, as at the Eton Mission, he met with a fine architectural idea, he supported it with all the force of his enthusiasm. From a strictly educational point of view, he showed an equal width of mind, and was one of the first to found a Mechanical School and to advocate the teaching of a wide range of subjects by lecture. Even in sides of the school work, such as science or mathematics, with which he was not directly concerned, he took a personal interest and showed a practical knowledge.

His religion, as simple and real as himself, had a great influence on all who knew him, for though he never had, in the pulpit or elsewhere, the gift of self-expression, he was one of those whose life, being all of one piece, is more eloquent than many words, and especially in the early days of his assistant mastership he did much to make religion a living force among boys. As one of his colleagues has said, "he came to Eton like a breeze from the sea," and there was no master or boy who did not feel the effect of a character so strong, so generous, so honest, and so kind.

PERSONAL PARAGRAPHS.

THE announcement of the appointment of Dr. T. F. Sibly, Professor of Geology at Armstrong College, Newcastle-on-Tyne, as the first principal of the new University College of Swansea, has been well received throughout the Principality. Dr. Sibly is an old student of University College, Bristol, and graduated B.Sc. (London) in 1903, with first class honours in physics at the age of twenty. After four years research work in Geology at Bristol and Birmingham, he gained the D.Sc. (London) and the Lyell award of the Geological Society. His first University appointment was at King's College, London, which he held for five years. From 1913 to 1918 he occupied the chair of geology at the University College of South Wales and Monmouthshire, and for three of these years he held office as dean of the faculty of science. It was during his tenure of office that the Royal Commission conducted its inquiry into the state of university education in Wales, and Dr. Sibly's display of university statesmanship throughout the inquiry impressed all who followed the proceedings. To him was due the chief credit for the preparation of the scheme submitted to the Commission providing for the co-ordination of technological education of a university standard throughout South Wales, and it is but fitting that he should now be occupying a position in which he can influence considerably the operation of that scheme.

AN appointment of particular interest, in view of the rapidly growing importance of post school education on which so much attention was recently focused by the Government Adult Education Report, is that of Mr. T. E. Harvey, formerly warden of Toynbee Hall and M.P. for West Leeds, to the wardenship of the Swarthmore Settlement, Leeds. Mr. Harvey is to take up office in September next, and, as he will be away from time to time in connexion with the international work of Friends, Mr. C. S. Hodgson, of Bootham School, York, has been appointed as resident or sub-warden.

THE REV. F. E. HUTCHINSON, Trinity College, has accepted the Secretaryship of the Oxford University Extension Delegacy, in succession to Mr. J. A. R. Marriott, M.P. for Oxford City. Mr. Hutchinson graduated from Trinity College in 1894, and, after filling various posts at Radley College and Cooper's Hill, became chaplain of King's College, Cambridge, and lecturer in history at Magdalene College. Since 1892 he has been Vicar of Leyland, Lancashire, where, in addition to his parochial duties, he has done much educational work for the University Extension Movement and for the Workers' Educational Association. Mr. Marriott is resigning all his university and college offices in order to devote himself exclusively to political life. He was elected as Secretary to the Delegacy in succession to Mr. (now Sir) Michael Sadler in 1895, and has therefore held office for a quarter of a century.

LT.-COL. A. E. SCOTHERN, C.M.G., D.S.O., the new Head Master of the Redditch Secondary School, has had a distinguished Army career. He joined the Army as a second lieutenant in 1914, and by 1917 rose to be lieutenant-colonel. He commanded the 6th Batt. Border Regiment from July, 1917, to February, 1918, and the 9th Batt. Sherwood Foresters from March, 1918, to June, 1919; and he was six times mentioned in despatches. Lt.-Col. Scothern was born in Nottingham and educated as a boy at a Nottingham secondary school. He graduated at Oxford with high honours and also excelled in sports. He took his Soccer blue and college colours at cricket, and played four times for England in amateur international matches.

MR. S. P. B. MAIS, who has recently been appointed Professor of English to the Royal Air Force Cadet College which is being established at Cranwell (Lincs.), is an old Denstonian and a former student of Christchurch, Oxford. He has had

teaching experience at Rossall, Sherborne, and Tonbridge. A prolific writer in the press, he is well known as the author of "A Schoolmaster's Diary" and other publications. At Oxford he obtained honours in mathematics and English literature and won two blues in sports. He was a member of the Lord Hugh Cecil Committee on the preliminary education of candidates for R.A.F. commissions.

THE KING, on the recommendation of the Lord President of the Council, has been pleased to appoint Mr. C. Grant Robertson, C.V.O., to be principal of the University of Birmingham, in succession to Sir Oliver Lodge, resigned. Mr. Robertson has been a Fellow of All Souls College, Oxford, since 1893, and tutor in modern history at Magdalen since 1905. He went from Highgate School to Hertford College as a scholar, and took first class in classics and in modern history, and won the Stanhope Prize Essay. For four years he was tutor in history to Exeter College, and, from 1901 to 1904, examiner in the Honour School of Modern History.

PROF. T. LOVEDAY, who occupies the Chair of Philosophy at Armstrong College, Newcastle-on-Tyne, has been appointed Principal of Southampton University College, in succession to Dr. Alex. Hill. Prof. Loveday was educated at Fettes, Magdalen, and Leipzig, and he has previously been Professor of Philosophy in Cape Town and in the University of Sheffield. During the war he undertook investigations for the Health of Munition Workers' Committee.

MR. JOHN BAYLEY, principal of Wellington College, Salop, since 1879, who unsuccessfully contested the by-election in the Wrekin division of Shropshire as Coalition Liberal candidate, has had considerable experience as a head master in private schools. He is well known in the area as a County Councillor and as a member of the Education Committee.

MR. A. W. CLAYDEN, for twenty-six years principal of University College, Exeter, has resigned at the age of sixty-four years, on the ground that the projected reorganization of the college requires the energy of a younger man who ought to have the opportunity of taking part in the preparation of the scheme which he will have to work. Mr. Clayden has rendered great service in guiding the development of the college from its infancy as a local school of science and art to its maturity as a university college for the South-Western area.

MISS C. L. LAURIE, who recently retired from office as president of the Assistant Mistresses' Association, is taking a much needed rest in the West Indies. She has been president of the Association for the last two and a-half years and previously in 1903 and 1904. Her intimate knowledge of the history and work of the Association, and her wide experience of, and interest in, the educational problems of the time, combined with her energy and enthusiasm, have enabled her to render much valuable service during the last few years.

MR. JAMES WHALEY, Director of Education, Morley, has been appointed to the Directorship of Education at Dudley, in succession to Mr. J. M. Wynne, resigned. Mr. Whaley has held educational appointments in the West Riding area for the last fourteen years, and previously had experience as a master in secondary, elementary, and evening schools.

MR. J. G. THRING, assistant master at Uppingham School for twenty-nine years, whose death in his sixty-sixth year was recently announced, was the eldest son of Edward Thring, the re-founder of Uppingham. As a pupil, he watched the evolution of the school, based on his father's ideals of education and the "true life." After graduating at Trinity College, Cambridge, and serving as an assistant master at Bromsgrove for a few years, he returned to Uppingham, finally obtaining the mastership of one of the smaller houses. He

retained his mastership during the tenure of the Rev. Carus Selwyn, who succeeded his father, and resigned during the headship of Dr. Mackenzie, who followed Selwyn, after twenty-nine years' work.

* * *

THE death of the Rev. Watson Failes, formerly Senior Mathematical Master at Westminster School, will be deeply regretted by all Old Westminsters. Mr. Failes was for many years a house master, and was also senior master during the tenure of the late Dr. Rutherford as head master. He retired some years ago to a vicarage in the country, after a service of over thirty years at the school. ONLOOKER.

TOPICS AND EVENTS.

VICTORIA LEAGUE.—H.R.H. The Prince of Wales has consented to become a Vice-Patron of the League, of which Their Majesties the King and Queen are the Patrons. The headquarters of the League are now installed at 22 Eccleston Square, where there is a reading and writing room for the use of members.

THE REGIONAL ASSOCIATION.—The Association is arranging a conference on regional survey during the Easter vacation from April 6 to 13, at the Outlook Tower, Edinburgh. Residence is being arranged in University Hall and Moray House, so that the advantages of communal life may be enjoyed. Applications should be addressed to the honorary secretary, Mrs. Fraser Davies, 65 Belgrave Road, S.W.1. The aim of the association is to promote the study of regions and their communities and the civic and educational application of the result of such study.

THE ROYAL ACADEMY OF MUSIC AND THE ROYAL COLLEGE OF MUSIC.—The Gold Medal, offered by the Associated Board of the Royal Academy of Music and the Royal College of Music to the candidate obtaining the highest honours marks in the Advanced Grade of the Local Centre Examinations, held in November-December last, which is open for competition to all candidates in the British Isles, has been won by Miss Florence E. Jeuchner, Brighton Centre—Pianoforte.

CHILD WELFARE.—A special course in Child Welfare is being arranged at the Battersea Polytechnic College of Hygiene from April 20 to July 16. It is especially designed for teachers holding the N.F.U. Higher Certificate who have had charge of a kindergarten or preparatory school. The object is to enable such teachers to qualify on the health side of child welfare, so as to enable them to apply for headships of nursery schools. Names of candidates should be sent by March 8 to Miss Kathleen B. Coope, 89 Elgin Avenue, Maida Vale, W.9.

TEACHERS' CHRISTIAN UNION.—Those who attended the interesting Conference on Ideals and Problems of Religious Education organized by the Teachers' Christian Union at Swanwick last Easter, or have read the papers and discussions collected in its report, will be interested to learn that it is proposed to follow this up with a number of smaller study conferences, to be held this year during Easter week at Caerleon, and during the last half of August at Bangor and Oxford. The programme is designed to give practical help with the difficulties of religious instruction in schools. Particulars may be obtained from the Secretary, Teachers' Christian Union, 16 Russell Square, W.C.1.

GUILD OF EDUCATION AS NATIONAL SERVICE.—On the first four Tuesdays of March, at 5.15 p.m., the Guild will continue its course of public lectures at 11 Tavistock Square, W.C.1. On March 9, Mr. F. J. Adkins will lecture on "The New Leisure"; on March 16, Miss G. Eaton, Educational Supervisor for Messrs. Harrods, Ltd., will give an address on "The Work of Our Continuation School"; and, on March 23, Miss H. M. Madeley, late Warden of the Birmingham Women's Settlement, will lecture on "The Impulse to Civic Service." The admission is free, but there

will be a collection to defray expenses. The object of the Guild is to promote education as national service, and encourage reforms in education for life and citizenship, recognizing that education is the basis of all social progress.

THE BRITISH SCIENCE GUILD.—The January issue of the *Journal of the Guild* includes an address on "Science in Industry," delivered by Sir Richard Gregory at the British Scientific Products Exhibition, a report on "The Need for Rewarding Medical Discovery," and particulars of the administrative activities of the Guild in connexion with the Registration of Schools, the Forestry Act and Forestry Commission, the appointment of Scientific Attachés to British Embassies and Legations, University and Higher Technical Education, and revised Specifications for various types of Standard Microscopes. Copies of the *Journal* can be obtained from the Secretary of the Guild, 6 John Street, Adelphi, W.C.2. The price is 7½d., post free.

FARADAY HOUSE ELECTRICAL ENGINEERING COLLEGE.—The annual examinations for a Faraday Scholarship of fifty guineas per annum tenable for two years in college, and one year in manufacturing works, and for a Maxwell Scholarship of fifty guineas per annum tenable for one year in college and one year in works, will be held at Faraday House on April 13 to 15. Exhibitions may also be awarded to candidates who acquire themselves creditably in the above examinations. Particulars can be obtained from the secretary, Faraday House, Southampton Row, London, W.C.1.

PHILIPS' ART PICTURES FOR SCHOOLS.—We have had the opportunity of examining some of the new pictures which Messrs. George Philip & Son, Ltd., have prepared for the decoration of school classrooms. The pictures are arranged in four series: six friezes in colour, showing the evolution of the ship; two series, each of eight cartoons in colour, depicting respectively the children of other countries and the children of history; and a series of some sixty notable pictures in colour. We advise teachers who are undertaking the decoration of their schools to examine these series, which are moderate in price, effective in design, and striking in their colour schemes. The series of notable pictures, which includes many well established favourites, should receive an immediate favourable reception.

FOREIGN AND DOMINION NOTES.

FRANCE.

Even before the war the French authorities had approved the introduction into normal schools of those experimental inquiries which were being prosecuted so vigorously in the United States. After the war M. Th. Simon, President of the Alfred Binet Society, was authorized by the Minister of Public Instruction to induct third-year pupils of the Normal Schools in the Department of the Seine into experimental methods of psychology and pedagogy. As a field of inquiry, the practising schools attached to the normal schools were used. M. Simon now publishes, in the *Revue Pédagogique* (LXXV, 12), an account of the methods employed and the results obtained. Tests, scales, measurements—every investigation was of the customary American type. "It was one of the desires of Alfred Binet," says M. Simon, "that the school, like industry, should have its laboratories. The idea is new and still encounters much scepticism. Perhaps, indeed, we have hitherto gained few results of immediate practical value; but, the true merit of our science being in the methods to which it accustoms its students, it would be beneficial to familiarize the pupils of normal schools with the methods of experimental psychology and pedagogy." It is a sober judgment; because these methods have yielded little so far, we cannot for that afford to ignore them while America, France, and Switzerland pursue them hopefully. But the place for them is in experimental or practising schools.

To test capacity, to study aptitude—these are tasks of pedagogy peculiarly important at the present time. In France, as in England, the journals report an increased resorting to secondary schools—"un

The Tests
again.

Why they are
needed.

mouvement de hausse dans la population des lycées et des collèges." Is it well to increase the number of briefless barristers, doctors without patients, and idle men content to live on what their fathers gathered, by letting the children of the New Rich crowd the secondary schools?—(M. André Balz in *Revue Universitaire*, XXIX, 1). The higher intelligences should be welcomed, the lower excluded. And for these, continuation schools! Seeking by means of a competition to discover the seven reforms most urgent in France, a journal found continuation, or the education of the adolescent, to be estimated as third in urgency (*L'Ecole et la Vie*, III, 17). As first was ranked the enforcement of the obligation to attend school, as second the equalizing of all children in respect of the right to education. French schoolmen say what English schoolmen say. Yet Whitehall will neither give us the continuation schools nor let us equalize educational opportunities.

We told at the time how the French Chamber had granted to all public *fonctionnaires* (civil servants, including State teachers) the *droit syndical*, the right of forming or joining trade unions. At the close of 1919 the Senate struck out the relevant clause from the enabling Bill. A new and liberal Statute for Civil Servants was promised (*L'Ecole et la Vie*, III, 17, 267). In the United States some of the State Associations have declared for an American Federation of Teachers, but against an affiliation of it to the American Federation of Labour. The independence and dignity of the teacher should be no less precious to him than his material interests, and he should shun alliance with disruptive powers.

GERMANY.

The German papers speak daily of the *Reichsverfassung*, *Reichsschulkonferenz*, *Reichsschulgesetz*, and so forth. It need hardly be said here that *Reich* does not mean "empire," in the restricted sense of a State governed by an emperor. The primitive meaning of the Gothic *reiki* was, as it seems, "rule," "power," and any domain in which rule or power is exercised is a *Reich*. Thus, according to Luther, the Devil showed Jesus *alle Reiche der ganzen Welt* (Luke iv, 5), where the Greek has βασιλείας, and we say "kingdoms." The exact meaning of *Reich* in German constitutional law appears from the "Verfassung des Deutschen Reichs" of 1871, in which it is stated that the contracting princes (named) *schliessen einen ewigen Bund* (form an everlasting league); *dieser Bund wird den Namen Deutsches Reich führen* (this league will bear the name German Reich). Although the contracting princes are gone, the *Reich*, or association of States, remains. How is *Reich* to be translated? We think by *empire* in French and by "empire" in English. Says Littré: "Empire se dit très-bien pour une vaste domination sans empereur; e.g. l'empire romain avant Auguste." And not only is the same wide meaning of "empire" common in English, but historians use "empire" to signify specifically "a confederation of States," as when Athens joined to herself Argos, Megara, and Thessaly. We may be allowed, then, to write of the "German Empire" without incurring the suspicion that we wish to restore the Exile of Amerongen. Nor were it proper for democratic nations to withhold from the new German State the old title of honour simply because the league is now one of peoples, not of princes.

Howsoever styled, Germany at the present hour is a grievous object of contemplation. Instead of the exultation that prevailed during the early stages of the war (*der frohe Krieg!*), despair is now general. A book entitled "Der Untergang des Abendlandes," which argues that the family of the nations hitherto the bearers of European culture has exhausted its strength and that Germany, in particular, is growing rigid unto death, has been widely read in recent months. Again, as it was foretold, the "Hymn of Hate" has bred hate among the haters; there is hatred in Germany of all the victorious enemies, class hatred, hatred of political opponents, hatred of every sort quite immeasurable. Let us turn, however, from the general to the particular. In the domain of education there is to be a *Reichsschulausschuss*, or Imperial School Committee, to prepare the ground for a *Reichsschulkonferenz*, or Imperial School Conference, and the collective wisdom of German schoolmen is to be incorporated in a *Reichsschulgesetz*, or Imperial School Law. But reconstruction implies the spending of money, and Germany has none to spend. The teachers of the secondary schools look forward to certain hardships or possible ruin. Inside the schools the effect of the war and of the new movements has been to reduce the population of the Greek-teaching Gymnasium. We have now trustworthy figures for Prussia:—

	Feb. 1, 1914.	Feb. 1, 1918.
Pupils in Gymnasien	101,745	93,867
„ Real-Gymnasien..	55,094	61,337
„ Ober-Realschulen	44,591	48,487
„ Realschulen,	31,926	34,026

In the Prussian secondary schools generally, up to the beginning of 1918, a depletion of the higher forms was accompanied by a remarkable increase of numbers in the lower.

UNITED STATES.

With its December number (X, 9), *The Historical Outlook* (Philadelphia) completed its tenth volume, and took occasion to review the progress of history teaching in the last decade of years. During that time committee after committee has studied old and proposed new curricula. Organizations of history teachers have been multiplied, so that now one exists in almost every State. There has been an increase of specialization in history among elementary teachers. Methods of training for the teachers and of instruction for the pupils have been improved. Besides the records of events, the principles of government and the duties of citizenship have been taught in many classrooms. A goodly list of American historical publications in the decade is presented. Goodly, too, is the catalogue of source-books on Greek, Roman, and American history that have been issued; yet for the profitable study of such books a methodical training is required. It has been said—was it not by Felix Dahn?—that nothing is so misleading as the sources until they have been examined critically. Contemporary opinion as made by the newspapers will not always coincide with later scientific judgments formed after a sifting of all the material. The history of the late war has yet to be written.

"Non è in corpo storto animo dritto"—straight mind is not found in crooked body; and America is showing as little tolerance for crookedness as for alcohol. We reported in January that a National Physical Education Service had been established to promote the health and bodily efficiency of American children. Its headquarters are in the Homer Building, Washington, D.C., and its work, blessed by the Commissioner of Education, is not only to foster physical activity and health-making habits, but also to discover incipient physical defects. Thirteen States have more or less effective laws requiring physical education in all schools—namely, California, Delaware, Illinois, Maine, Maryland, Michigan, Nevada, New Jersey, New York, Oregon, Rhode Island, Utah, and Washington. Two Bills now before Congress propose that a sum of twenty million dollars should be distributed among the States for the purposes of physical education, each State being required to contribute an amount equal to the Federal grant. This American movement may mean much for race development.

INDIA.

The Punjab Primary Education Act, which provides for the introduction of compulsory education (for boys from six to eleven) by local option, yields one more illustration of the worthlessness of permissive legislation. The Municipality of Multan is the only body that is taking practical steps to make use of the Act. Otherwise the news from the Punjab, as contained in the Report for 1918-19, is satisfactory. If the year under review was not marked by any large increase in the number of schools and scholars, it saw important changes introduced. A scheme for the extension of vernacular education was brought into effect. Measures were taken to foster the teaching of agriculture in middle and high schools, and a system of manual training centres for high schools was established. Four new normal schools for women were opened. The Punjab University passed regulations for the establishment of Honours Schools, and instituted a Diploma in Commerce. As to teachers, head masters proved able to maintain discipline in the recently disturbed areas. Secondary schools were well staffed, the proportion of pupils to teachers being only 18 to 1. Many districts improved the pay of primary teachers.

Pamphlet No. 6 of the series issued by the Bureau of Education relates to Indian State Scholarships. There are thirty Technical Scholarships, two for the study of Oriental languages, two reserved for women, and four others. What are these among so many? The Oriental Languages Scholarships, tenable either in a European or an American university, are held ordinarily for two years—too short a time for deep studies.

(Continued on page 150.)

From METHUEN'S EDUCATIONAL LIST

A Complete Catalogue will be sent on application.*

JUST PUBLISHED

A PRIMER OF FRENCH PRONUNCIATION. By STANLEY W. GRACE, B.A., Assistant Master at Malvern College, formerly "Lecteur anglais" at the Lycée of Laon. With a List of words frequently mispronounced, blank pages for additional notes, and an Index. Crown 8vo. **3s.**

A Head Master writes:—"An excellent little book, the most practical I have ever seen on the subject, and the most readable."

A SOCIAL HISTORY OF ENGLAND. By E. M. WILMOT-BUXTON, F.R.Hist.S., Author of "The Ancient World," "Makers of Europe," "A History of Great Britain," &c. Crown 8vo. **5s.**

METHUEN & CO., LTD., 36 ESSEX STREET, LONDON, W.C.2.

CEYLON.

The Ceylon Education Report, just received, covers the year to December 31, 1918. It shows an increase of 14,500 in the number of pupils attending school, which is two and a-half times the increase for the preceding year. Attendance improved owing to the facts that absences were promptly reported and deterrent fines imposed; and, indeed, the statistics generally indicate orderly progress. Ceylon has gained some reputation as the source of quaint English. The report tells us how one student wrote: "It is better, as the saying is, to be a master of one job than to be a jackal of all"; whilst another related that David Livingstone "gave his life to propagating negroes in Africa." The appeal of the writer who began "With due defiance and submission I beg to lay the following before; I hope you will take a pathetic view of my case" would hardly move an official heart. An interesting section of the Report deals with Oriental studies. The "Committee on Oriental Studies" was converted into "The Society for the Promotion and Encouragement of Oriental Studies," and the limitation on the number of members, which had been restricted to fifty Buddhist priests and fifty laymen, was removed. General meetings of the Society are to be held more frequently. It is hoped to start special classes in English for Buddhist priests, so that with the knowledge got they may be enabled to keep in touch with Western scholars and to translate for their benefit the many valuable manuscripts kept in the monasteries of the island.

THE SUDAN.

The Seventeenth Annual Report (dated May 22, 1919) of the Gordon Memorial College at Khartum shows the institution as continuing its career of prosperous activity. Elementary vernacular education has been encouraged. Education in general is governed by local requirements. The conditions of life in the Sudan are very simple; the majority of people live in grass huts or tents and are engaged in pastoral or agricultural pursuits; the existing demand for artisans trained on European lines is therefore very small. Accordingly, two small technical colleges have been closed. Students who have passed beyond the primary stage are required; all branches of the civil administration ask for candidates who have had a secondary education, and the army authorities likewise wish to recruit the military school from such candidates. Hence it is proposed to admit more boys into the Upper School of Gordon College. Kinemas, dramatic performances, boyscouts—the Sudan is getting them under the auspices of the College. Its work in promoting research is maintained, and its laboratories have continued to be in touch with British, Allied, and Neutral institutions throughout the world. A comprehensive report of the investigations made by the Research Department should be published without further delay.

SOUTH AUSTRALIA.

The *Education Gazette* (No. 401) supplies some interesting details as to the classification of teachers in South Australia. Under new regulations the classification of a teacher will depend partly on his attainments, partly on his practical skill. His attainments will be tested by oral or written examinations. The practical skill of a teacher will be represented by marks, and the estimate will be based upon the inspector's observation of:—(a) The teacher's endeavour to carry out the suggestions given in the rules of inspection, the course of instruction, and the regulations; (b) his interest in his work, and his zeal in its performance; (c) his influence in the formation of character and the development of intelligence; (d) his ability to manage a school or a class; (e) the effectiveness of his teaching, as shown by the results at inspection, and by his success in preparing candidates for departmental examinations; and (f) the tact shown in dealing with children and parents. After considering the inspector's report and other evidence, the superintendent may assign a mark, from 1 to 80. The scheme is, so far as we know, novel, and worthy of attention.

QUEENSLAND.

Queensland continues to encourage notably vocational education, expending on technical schools in 1918 nearly £60,000. There is a probability of marked expansion in the technical colleges, of which fifteen are now established in the State. Thirty-one branch classes give vocational instruction in such subjects as woodworking, dress-making, cookery, book-keeping, shorthand, and typewriting. Of education in general good progress is reported.

PRIMARY SCHOOL NOTES.

The Appointed Day.

THE continued delay in announcing the appointed day for the raising of the school age to fourteen years is causing grave concern among those who have at heart the welfare of the industrial areas. Considerable injury has already been wrought among children who have been hurried into the factories as half-timers, and it is regarded as lamentable that the half-time system should have received a new lease of life at a period when the textile industries have experienced unprecedented prosperity. Under existing conditions much of the painstaking work of school doctors and nurses is being nullified by the destructive action of the half-time system, and it is one of the anomalies of the situation that, while educational authorities everywhere are complaining about the difficulty of providing school accommodation, thousands of school places are vacant daily in districts where the half-time system is rampant. While local authorities are penalized, financially, by the withdrawal of the special grant formerly paid by the Board on account of half-time attendances, the task of the teachers who have to attempt the education of children who can make only 50 per cent. of the attendances is hopeless and heartbreaking.

* * * * *

Consultation with Teachers.

DURING recent years there has been distinct evidence of the desire of the Board of Education to meet representative teachers in consultation, and it is significant that there has been an accompanying improvement in the relations between the Board and the official leaders of the profession. At the same time, while there has been a deepening of cordiality in the association between the rank and file of the inspectorate and teachers, it is possible that a fuller measure of co-operation might be secured if the merely inspectorial function were completely subordinated to the consultative. That there are still inspectors who regard criticism as a prime function is a matter of common knowledge to teachers, and it is equally unfortunate that the existence of such officials should be regarded in the schools as one of the necessary evils of life. A greater use of the consultative function between local teachers and inspectors is a prime necessity if the proposals of the Education Act are to emerge successfully into practice. The existing policy of the Board of Education appears to include a generous degree of consultation with local education committees, but, on the whole, it does not appear to take much thought of the practical expert. And, after all, no scheme of school reform has any prospect of success unless the faith and enthusiasm of the teachers are behind it.

* * * * *

The National Minimum Scale.

THE fairly general action of the rural education authorities in adopting the provisional national minimum scale for teachers will probably induce country teachers to remain in their schools, and, by staying the movement of teachers downward, there is some prospect of building up teaching staffs to a point which will enable the continuation schools to be staffed adequately in due course. On the other hand, there is considerable diversity of action on the part of education committees in the large towns, some few of which are threatening to adopt the Burnham scales as they stand. The result is that teachers are migrating to districts where more enlightened views prevail, and, while there is as yet no sign of any revival of recruiting to the teaching profession, there are thousands of vacancies for teachers throughout the country. So far as the towns are concerned, there is general agreement among teachers that a maximum salary of £450 per annum for certificated men teachers will have to be paid to retain men in the service and to induce others to enter it. The early issue by the Burnham Committee of complementary scales of salaries for industrial and urban districts would do much to help local education committees to realize their responsibilities in this respect.

* * * * *

The Supply of Teachers.

THE latest returns of the Board of Education show that the decline in the number of teachers continues. Whereas, in 1917, there were 166,476 teachers working in the schools, there was a decrease of 664 during 1918, and a further decrease of 1,988 in 1919, when the total was 163,824. While there are comparatively small decreases in the number of men teachers, due doubtless to the demobilization of many teacher soldiers, it is significant that there was a decrease of 2,280 in the number of uncertificated

women teachers during the period 1917-19. While this was counterbalanced to the extent of 1,323 by an increase in the number of certificated women teachers, it is clear that the profession is not making a strong appeal to women. It is worthy of note that in this connexion the proposals of the Burnham Committee have been unanimously rejected by the organized bodies of uncertificated teachers.

* * * * *

The Easter Conference.

THE Easter Conference of the National Union of Teachers at Margate will be noteworthy because it marks the Jubilee of the Union, and because of its record membership of 111,877. No fewer than 10,000 new members have been enrolled during the past year. The agenda is conspicuous for the prominence given to questions of purely educational interest, including:—the National System of Education, the Education Act, the Training of Teachers, and Whitley Committees. The question of the staffing of Day Continuation Schools will also be discussed.

* * * * *

National Union of Teachers.

THE Thank-offering Fund of the Union in aid of old teachers who are not enjoying the advantage of the Superannuation Act now exceeds £50,000. The report of the Examinations Board shows a great expansion of this side of the Union activities: in 1918 the total number of examinations held was 9,545; last year the number was 10,138. At its last meeting the Executive voted a grant of £250 from the Reserve Fund for the relief of Austrian children, and it was decided to circularize Local Associations upon the subject of co-operating in district movements which have the same object in view. A very grateful acknowledgment was received from the Austrian Teachers' Union for the assistance recently granted by the N.U.T. It was resolved to invite applications from members of the Union staff for the position of Assistant Secretary at a commencing salary of £600 rising by annual increments of £25 to £800.

* * * * *

Upper Standard Courses and Central Schools.

REPORTS from several areas indicate considerable confusion as to methods of dealing with the problem of educating children between the ages of twelve and fourteen years. New buildings are already being planned upon the central school basis for pupils up to the age of fifteen years, and presumably such schemes have the approval of the Board of Education. In other districts, schemes are being more or less hurriedly drawn up by means of which existing schools are being ear-marked as central schools in the belief that the senior pupils from adjacent schools will be sent as a matter of course to the centres. It is possible that there is not a full realization of the great stride forward which the raising of the school age will constitute in many parts of the country; but there is no doubt that in these particular areas, which are considerable in extent, there will be little inclination on the part of parents to allow their children to remain at school until the age of fifteen, especially as the subjects taught there promise to consist largely of the primary type. If parents could secure a sound system of secondary education for their children, many would welcome it. The hasty improvisation of central schools threatens to disturb the continuity of primary education; the erection of new buildings for use as central schools cannot fail to affect adversely the provision of secondary as well as continuation schools, and the central schools will undoubtedly have the effect of draining the primary schools of their best teachers. In the circumstances there is much to be advanced in favour of making primary schools wholly self-contained until the new school age has been established throughout the country. It would be a comparatively simple and inexpensive matter to add advanced courses for the older pupils, and in cases of limited accommodation to draft the lowest classes to the infant departments. Such a course would be educationally sound, and it would also preserve intact the spirit of *esprit de corps* which is not the least valuable of primary school influences.

MISS A. T. STEELE, Head Mistress of Grey Coat Day School for Girls, Grey Coat Hospital, Westminster, London, S.W.1, would be grateful if any reader who has helped in the production of Tennyson's "Foresters" could give her any information as to where the music for the songs could be obtained.

CORRESPONDENCE.

MIXED SECONDARY SCHOOLS.

To the Editors of the Journal of Education and School World.

SIRS,—The columns of the London and Provincial press contained many reports of a discussion on Mixed Secondary Schools, which took place last month at the annual meeting of the Incorporated Association of Head Masters. In the course of that discussion references were made to a memorandum on schools of this type, issued in the form of a leaflet by our Association, and to what, in the opinion of the speakers, were the object the memorandum had in view and the motives which prompted its issue. Our Executive Committee hopes that you will allow us space in your paper for a statement of the actual facts.

The leaflet in question was drawn up in the year 1914 by a joint committee of head and assistant mistresses, and was issued with the cordial support of the Education Section of the National Union of Women Workers. It has never since been reprinted or reissued, so that what has been termed an "attack" on mixed secondary schools is an affair of six years ago. The memorandum expressly states that it does not refer to any co-educational schools founded to carry out certain definite educational theories, but exclusively to mixed secondary schools under the headship of a man established by local education authorities, and owing their origin to motives of economy. To represent it as in any sense an attack on the co-education of the sexes is therefore clearly inaccurate. As a matter of fact, opinion in our Association as to the desirability of co-education has always been divided, and it would have been impossible for us to have made any general pronouncement for or against this type of education.

Our objections to certain mixed secondary schools, as they existed in 1914, were based partly upon the danger of over-pressure on girls working in the same forms as boys at the age of adolescence, and partly upon the unsuitability to girls of forms of discipline customary in the case of boys. But what were understood at the time to be the more contentious parts of our memorandum were the references to the position of the mistresses and, in particular, to that of the senior assistant mistress. We felt it to be vital that girls from fourteen to eighteen should have the guidance of wise and sympathetic women, and we knew that upper classes in mixed schools were taught almost entirely by masters, while the senior mistress often lacked opportunities of dealing with girls apart from boys, was not easily accessible to parents, and had no private room for interviews with either girls or parents.

These and several other points were discussed in the year 1916, and in the most friendly spirit, at an informal conference between three representatives of the Head Masters' Association and three of the Association of Head Mistresses. Since then the preoccupations of the war and pressure of other educational business have prevented further progress in the matter. We were quite unaware that the views put forward in 1914 were regarded by any section of the Head Masters as a "declaration of war upon mixed schools following upon the Armistice of 1918."

A closer examination of the circumstances might possibly have prevented the speakers in the discussion to which reference has been made from attributing to us motives of self-interest, and from declaring that our memorandum formed part of the feminist propaganda of the time. The memorandum, it is true, went so far as to say that to have a man at the head of a school which girls attended entailed loss to the girls. But, if it were usual to appoint women to the headships of mixed secondary schools, head masters might, we imagine, be found raising an analogous objection on behalf of boys. Our Association, like that of the Head Masters, contains members of widely differing views on political, social, and even educational questions; but on one point at least we are unanimous—our right to hold and our duty to put forward when

THE PUBLIC SCHOOLS AND TRAINING FOR BUSINESS.

To the Editors of The Journal of Education and School World.

SIRS,—If one not directly connected with teaching may venture to ask for space in your columns, I should much like to ventilate a subject which seems to merit special attention at the present time. I refer to the effect of the attitude of industry to our public-school system as brought out by the new Education Act. A combination of certain trades has just issued a report prepared by a special committee of these trades upon education. This fact alone is striking enough, and the tenor of this report is of great interest. We are so accustomed to the grudging attitude of employers and of labour towards education that it is illuminating to hear from such a source a complaint that, under the new Act, the leaving-school age is not high enough, and to find a plea for broad, general education as against early specialization. Numerous criticisms of our present system are made, but I shall venture to deal with only one—a charge that on leaving school the average boy is quite unable to apply his knowledge to the initial requirements of his life's work. To avoid any misconception it should be stated that these new devotees of education, rightly, do not ask for business or professional training at school; they merely ask that a boy shall, before leaving, be adequately grounded in such a manner that he can at once adapt his knowledge to the requirements of his new environment. Personally, my idea of good school teaching is

the implanting of the power to learn; but, in this material age, with the "speeding up" which we are about to see from State funds and popular opinion, it would seem that, if our public schools are to hold their place, during the last year or so of school life, some links should be provided which will indicate the application of lessons to a subsequent career, which, in addition to utilitarian value, would generally stimulate the pupil's interest. If this be admitted, the question arises whether our schools are really in sufficient touch with the many and diverse careers open to boys. Where such links want forging, may I ask tentatively whether it would not be possible to arrange that business men of standing occasionally should address senior boys, and possibly their parents, on the requirements, aims, and openings of the particular career to which such men belonged? There should, one would imagine, be men sufficiently public-spirited and interested—many with sons at schools—to make this possible, though the success of such a scheme would no doubt involve some organization. There might be incidental advantages, such as the bringing of boys into contact with openings, though I would not suggest any general resemblance to the work of care committees.

How much might often be saved by a real insight into a profession or trade which could be thus given, and surely there are few things more tragic or more wasteful of national energy than the entering of a wrong walk in life, a walk dictated not by natural tastes and predisposition—those essentials of success—but by chance and mere opportunism!—I am, Sirs, yours,

ALAN E. MUNBY.

9 Old Square, Lincoln's Inn, W.C.2.

"ARCHAIC ENGLAND."

To the Editors of The Journal of Education and School World.

SIRS,—In view of the sympathetic consideration which your reviewer accords to my theory that the aborigines of Britain reached their destination by sea via the coasts of Iberia, you may possibly deem it of sufficient interest to note the following passage from Wilson's "Prehistoric Annals of Scotland, 1863" (Vol. I, page 55): "The other canoe was chiefly remarkable for a circular hole in the bottom, stopped by a plug imbedded in very tenacious clay, evidently designed to admit of the water it had shipped being run off when on shore. But the most curious, and indeed puzzling feature is that this plug is not of oak but of cork; a dis-

covery suggestive of intercourse with the Iberian peninsula, or perhaps serving to indicate the route pursued by some of the early colonists of the British Isles."

The boat in question was discovered with twenty or thirty others in company with the bones of whales: they must therefore be dated backward to that inconceivably remote period when sea monsters disported themselves on the site of modern Glasgow. It is said that archæologists have constructed an empire out of a shoe: from the positive and direct evidence of a bunghole and its eloquent piece of cork similarly interesting deductions may eventually be disclosed. Had I been acquainted with Wilson's work at the time my theories were formulated, I should, of course, have made use of his evidence.—Yours faithfully, HAROLD BAYLEY.

QUALIFYING SERVICE FOR SUPERANNUATION ACT.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—Many of your readers will doubtless be interested in the copy of letter dated February 2, 1920, received from the Board of Education, enclosed herewith. The service of organizers of physical training and needlework with the local education authorities will count as qualifying service for the purpose of the School Teachers (Superannuation) Act, 1918.—Yours faithfully,

C. G. WATKINS,

Secretary, Bucks County Education Committee.
Education Office, Aylesbury.

[COPY.]

Board of Education, South Kensington, London, S.W.7.
2nd February, 1920.

Pen. 2780/20.

SIR,—In reply to Mr. Watkins's letter of the 18th October (G/A), I am directed to state that H.M. Treasury have now declared, on the recommendation of the Board, that service as an official of a local education authority whose salary is paid out of the Education rate is qualifying service for the purposes of the School Teachers (Superannuation) Act, 1918. It, therefore, appears that the service of the organizers of physical training and needlework employed by the authority (if, as the Board understand, it is full time) is qualifying service for the purposes of the Act.—I am, Sir, your obedient servant, (Signed) H. J. SIMMONDS.

To the Local Education Authority, Bucks.

A MOVE IN THE RIGHT DIRECTION.

To the Editors of *The Journal of Education and School World*.

SIRs,—A movement now on foot in some of our larger public schools shows that a part, at any rate, of those who are responsible for the outlook of the coming generation is alive to the importance of finding a solution for a problem which is certainly not the least of those which will engage attention once the immediate debris of war has been cleared away. This problem is the future relationship of Greater Britain and those States which are called her "Colonies." Is the old state of things to go on, or may we hope that the eyes of future Englishmen may be opened to a splendid ideal? This ideal is the creation of a "Greater Britain," a federation of free states in which Canada and Australia will stand to Great Britain in the same relationship as now exists between California and New York, the creation of the United States of Greater Britain.

So far, we have always seemingly approached this question in the wrong spirit. The splendour of the British Empire might be made infinitely greater. Think of the power and might of this great federation of free states! How much greater would be our power for good if we were citizens not of one small island lying off the continent of Europe, but of that great union of free states, Greater Britain.

Colonials, as we persist in calling them, have always, in the spirit of this wider vision, refused to be regarded as foreigners. They have always set before their eyes the vision splendid, the true Greater Britain, and particular interest attaches to the appointment in several public schools of a "Colonial" to the teaching staff, who shall generally make it his aim to awaken an interest in things imperial. This is a movement which should not be confined to the greater schools. Of course, it is impossible for all schools to have a colonial on the staff, but surely the spirit of the movement might be found in one member at least of most school staffs. If this movement should grow, then the next generation might shake off the apathy with which the average Englishman of to-day regards the Empire, might at least be able to understand the vision of a true Greater Britain fulfilling the destiny to which the English-speaking race is called.

HOW TO MAKE HISTORY REAL

In every type of school the teacher feels the need of a textbook which will present in vivid and accurate word-pictures the evolution of the social system in which we live to-day. The personal peculiarities of kings and queens, the intrigues of statesmen, the march and countermarch of armies, the conflict of political parties, and the provisions of treaties and Acts of Parliament, he finds in detail *ad nauseam* in the ordinary school history book. But, as a rule, he finds little to help him when he attempts to picture to his pupils the ordinary everyday life of the common people: how the workers fared, why Poor Laws and Factory Acts were necessary, what town and country life was like, how newspapers arose, how means of communication developed, how England became a great industrial nation, and how the vote, law, and justice gave rights and privileges to the meanest of citizens. This need is met in these four books.

THE TRAINING OF SECONDARY SCHOOL TEACHERS.

THE question suggested by the title of this article (for, so far as the collective mind of the profession is concerned, we might still have written "Should Secondary School Teachers be Trained?") has been discussed in all its bearings these many years past. Nevertheless, it is good to put the question again from time to time, not with a view to the mere refurbishing up of familiar arguments, but rather with a view to seeing how those arguments look in the light of the present situation. Besides, we have the coming generation of teachers to think of, and the practical issue for the existing secondary teacher is not whether he was right in giving the training course the go-by years ago, but what attitude he ought to adopt with reference to the training of new entrants to the profession. The Teachers Registration Council, which from its composition may justly claim to be really representative, has indeed declared in effect that training is essential to the idea of a recognized profession, in teaching, as in law and in medicine, i.e. that the possession of a good education, which in practice usually means a degree in arts or science, is by itself insufficient. But it was the business of the Registration Council to frame regulations, not to give reasons; and those regulations can never take full effect until they are supported by the fairly united opinion of teachers. It is we who have to ascertain and examine the reasons, and to satisfy ourselves as to whether they are good.

Why, then, should an accredited body of representatives have taken it for granted that training is essential for a fully equipped teacher? In answering this question we had better not rely too much, as some have done, on the analogy of other professions, because analogies are, after all, only suggestive and have no coercive logical force. Superficial analogy is well known to be a prolific mother of bad arguments. We had better look with some care into the actual content of a

normal training course and ask ourselves what it is likely to yield, by way of knowledge and inspiration, to an intending teacher. And we may find by the way that the usual courses need amendment, though that is no sufficient ground for rejecting them outright.

First—and let us take the cold plunge at once—comes the blessed word “psychology,” a word at which many persons who do not count themselves reactionaries, including perhaps most of the Board’s officials, distinctly “jib,” at least in the present connexion. Now we are quite prepared to admit that a good deal of the psychology that has been taught has been tentative and provisional, and some of it misleading and harmful. But the person who is prepared to dispense entirely with educational psychology is surely showing some lack of sensibility to the very intellectual atmosphere in which we live. There is almost no important province of thought or practice which has not been successfully invaded by the psychologist during the past two or three decades. Some of the best of current political thought, as exemplified, let us say, in the writings of Mr. Graham Wallas, are thoroughly psychological in spirit and in outlook. Precisely the same thing is true if we look to religious and theological thought—witness, for instance, the volume of essays recently published under the editorship of Canon Streeter. One understands, too, that medical science, even allowing for some of the possible extravagances of the psychoanalysts, is being pretty completely revolutionized in some of its aspects by psychology. Again, the psychologist bids fair to attack successfully the labour problem—how many hours a day a man can economically work at a given kind of job. Of course, these again are only analogies, but their cumulative force ought to restrain people who are inclined to sniff at educational psychology. One could not prove one’s case without writing a treatise, but teachers may rest assured that the psychology now taught in the best training colleges is worth knowing, and is probably going to make its mark upon teaching.

The part of the course which probably needs no apologizing for is that which is known to the initiated as special method, *i.e.* the method or methods of teaching the several branches of the curriculum. If a man is going to teach mathematics or science, or history, or classics, or modern languages, and knows that he is going to do so, he has to choose between two things. Either he must rely upon his recollections of his own schooldays, upon uncriticized tradition, and tell the tale as ’twas told to him; or he must ascertain more or less completely what the best teachers have said, or are saying, about the teaching of the subject and their reasons for saying it. One of the functions of a good course of training is to see that he does this thoroughly. Few would gainsay the wisdom of reviewing modern experiments in planning and elaborating the course of instruction in a subject, as a preparation for attempting to do such work oneself.

Another part of the usual course of training is that which deals with the history of education. Here it must be confessed that widely divergent views are held, even among the trainers themselves. Having regard to differing tastes for historical study generally, and having regard also to the frequent lack of any direct bearing upon the work of a teacher at the present time, some would go so far as to eliminate the history of education almost entirely, or at least to make it optional. Others, taking high ground as to the humanizing and broadening effects of such a study, would make it a vital matter. Without venturing to dogmatize, we may go so far as to say that even a person who has little taste for history must realize that the present cannot be understood without reference to the past from which it has evolved, and that therefore some knowledge of the history of education in our own country in recent times ought to be more than acceptable, because it is really illuminating, to any intending teacher. The more general history of education may make little appeal to a person who possesses only a scanty knowledge of general European history.

Lastly, we notice the practical part of the course, that part which is carried out in the schools—practising schools, demonstration schools, and experimental schools or classes. Here, again, an intending teacher has to choose between two

things: either he must take the plunge, with nothing to help him but recollections of how he was taught when a boy, or he may take a training course, and so get his early efforts carefully supervised and made the subject of sympathetic criticism in such a way that he may speedily become his own severer critic. Whether we are thinking of methods of teaching, or of modes of maintaining discipline, can there be any doubt as to which is the saner plan? After all has been said about the born teacher, and, on the other hand, about the occasional failures of the training colleges—for even training colleges cannot make silk purses out of sows’ ears—it remains true, as hundreds of trained teachers can abundantly testify, that the practical part of a training course prevents an endless amount of avoidable blundering on the part of the young teacher, and makes it unnecessary that numbers of pupils should be the unfortunate victims of that blundering.

Assuming, then, that a course of professional training for an intending secondary teacher is desirable, we have next to ask at what period in his career such training should take place. One has to be careful in drawing analogies between the elementary and the secondary branches of the profession, but in this particular respect the parallel is so obvious that we may make a safe inference. The three-year system, in which the student works for his degree, and pursues a course of training at the same time, has been tried in the case of the elementary teacher and has been found distinctly wanting. In most cases the academic studies naturally occupy the focus of attention and interest, because the possession of a degree is vital; and so the professional part of the course tends to go to the wall. If the student tries to do both conscientiously and well, he has usually been overworked; hence, in the university training departments, the four-year course for the elementary teacher is now the rule, and what is good for him in this respect is *a fortiori* good for the secondary teacher. The professional course must, in a word, be a post-graduate course.

As to the duration of the course, experience gathered from both the elementary and the secondary branches leaves no reasonable doubt that a period of three terms is the least that can be regarded as satisfactory, whether for the adequate mastery of principles or for securing a sufficient amount of supervised practice. Possibly a good deal could be said in favour of shortening the course somewhat in the case of a person of exceptionally promising personality who has taken high honours at the university, but instances of this kind can never be numerous enough to invalidate the general rule; and, after all, there is much to be said for asking the exceptional person to fall into line with others instead of demanding a course which is bound to cause an additional strain upon the organization and resources of a college.

Should the training college or the practising school be the headquarters of the course of training? Both plans are allowed by the existing regulations of the Board, and it is easy to conceive of conditions which would make either of them successful. Advocates of the second plan lay the stress on the practical part of the course, often almost to the pitch of denying that the theoretical part is of any account. Unless the reasoning set forth above is wide of the mark, this position cannot be maintained. Indeed, the great danger of making the school responsible for the training is that the training shall resolve itself into an apprenticeship or glorified pupil-teachership. What the intending teacher needs is a critical study of different systems rather than the mere imitation of one.

It is a well-known fact that training for secondary school work has hitherto made much greater progress among women than among men. People who are fond of speculative generalizations about the psychology of the sexes may account for this difference by referring it to the superior keenness and enthusiasm of women for the whole business of education. Perhaps this is partly true, but perhaps also there is a less esoteric reason. Hitherto teaching has on the whole provided a distinctly better career for single than for married people, *i.e.* speaking broadly, for the women of the profession than

the men. But now, with the upward tendency of salaries and the provision of a good pension scheme, teaching begins to hold out better prospects to young men, and it is becoming better worth their while to undergo a thorough preparation. To put the whole matter in a nutshell, the abstract case for training is too strong to be ignored, and the concrete circumstances bid fair to enable the authorities to make a strong stand on the subject. The ideal of the Teachers Registration Council may therefore not be so far off realization as people are apt to suppose.

T. R.

UNIVERSITIES AND SCHOOLS.

OXFORD.

The Responsions Statute has now been accepted by Congregation at Oxford. It has, however, still to come before Convocation, and it is understood that the supporters of compulsory Greek will call up every member who can be relied upon to oppose it. This procedure is regrettable, and it is to be hoped that it will not succeed. As the Statute now stands it represents a compromise which has the support of an overwhelming majority of the teachers in the University, and its rejection by Convocation will make the position more confused and hopeless than ever. If Convocation, on the other hand, accept the Statute, Greek will not be a compulsory subject in Responsions, but candidates for honours in final schools other than those of mathematics, science, or jurisprudence must take some Greek in an examination before the final. This can be done in the Previous Examination, when candidates will have an opportunity of showing a knowledge of some period of Greek history or literature in connexion with a Greek book studied in a translation. It will thus be possible for a pupil from a secondary school which does not make Greek a regular part of its curriculum to proceed to Oxford without having to cram up a smattering of the subject at the expense of other subjects on which he can do good work.

Mr. J. A. R. Marriott, M.P. for Oxford City, has resigned the secretaryship of the Oxford University Extension Delegacy in order to be able to devote himself exclusively to political life. Masters and mistresses in secondary schools should note that the vacancy has been filled by the appointment of the Rev. F. E. Hutchinson, Trinity College, who is well known as a worker in connexion with the Extension movement and also with the Workers' Educational Association.

LONDON.

As early as 1914 the Imperial College of Science began to press for the right to grant degrees in the subjects taught in its constituent colleges, but the matter was in abeyance during the war. Of late further steps have been taken, including a deputation to Mr. Balfour and Mr. Fisher, and there has been considerable correspondence in the Press. The arguments in favour are certainly strong. The Imperial College offers opportunity for training and research in the application of scientific principles to industry, and the standard required for the diplomas, which are all it can grant at present, is as high as that required for degrees in British Universities; yet diplomas do not carry the weight of degrees for which its students must sit elsewhere. This disability is, of course, shared by the Royal College of Science, the City and Guilds Engineering College, and the Royal School of Mines, which are integral parts of the Imperial College. The last-named institution complains with some truth that mining engineers in other countries are granted degrees and that, therefore, its mining and metallurgical students are at a distinct disadvantage when compared with foreign competitors.

The work done by the School of Economics and Political Science becomes, year by year, of a more varied character: a course of lectures preparatory to consular services is being given dealing with the study of foreign public administration, its financial, transport, and economic organization; there are also proposals, not yet reduced to concrete form, for the establishment of a School of Foreign Affairs. This school is embarking upon extensive building operations with the view of widening its activities generally, and for this purpose will require something like £150,000, of which sum £50,000 has been already provided by the Commerce Committee set up last autumn. The provision of the latter sum carries with it the addition to the management committee of the School of six names of men of weight in commercial circles. Already 112 students are attending the courses for the new degree

in commerce, and there is little doubt that a large number of pupils will in the future join from the secondary schools in and near London.

WALES.

The last of the series of conferences convened by the Departmental Committee which is inquiring into the organization of secondary education in Wales, met at Carmarthen on February 5, and it was well attended by educationists from Carmarthenshire, Radnorshire, and Cardiganshire. The agenda paper had been curtailed to prevent the discussion from becoming too general and diffuse, but the experiment was only partially successful, for none of the speakers presented a well-considered scheme of government, and the majority of them were satisfied with a mere expression of approval or disapproval of existing conditions. The Bishop of St. David's, who is an experienced educationist, gave the Central Welsh Board his blessing and even went so far as to advocate the establishment of a National Council to which the practically unfettered control of all grades of education in Wales should be assigned. On the other hand, the chairman of the Pembroke Education Authority and Sir Francis Edwards (chairman of the Radnorshire Authority) had no faith in local self-government, and therefore were prepared to entrust the supervision of our educational machinery to the Board of Education. But, fortunately for the supporters of the national policy, these opinions are not likely to impress the public, as the speakers merely expressed their views without giving any reasons in support of them. The Rev. A. W. Parry, principal of the Carmarthen Training College, indulged in a somewhat novel piece of criticism which it would, perhaps be well for us to ponder. He believes that in recent years Welshmen have been so absorbed with the external machinery of education—committees, conferences, and so on—that they have neglected the study of real educational problems, and that the output from Wales in the way of educational articles and research into fundamental principles, has been deficient. How far this charge can be sustained is doubtful, nor is it by any means self-evident that the real progress of a country is to be measured mainly by the number of educational articles which it produces. We should rather prefer to regard the character and the number of the men who are trained in its schools and colleges as a far truer test of the success of its educational system, and by this test we believe that Wales will be fully prepared to be judged.

Dr. Franklin Sibly has been appointed as the first principal of the University College, Swansea. His appointment has given general satisfaction because Dr. Sibly not only has a practical acquaintance with University conditions in Wales, but he has also given evidence of statesmanlike qualities and breadth of view in dealing with questions of higher education. His evidence before the Royal Commission on University Education was mainly responsible for the present scheme of technological education adopted in South Wales, and we have no doubt that in his new post he will be able to extend and improve it in many important directions. Dr. Sibly was professor of geology at Cardiff College for five years before he was appointed to his present post at Newcastle-on-Tyne, in 1918, and he was engaged in some valuable researches in the Welsh coalfield and in the Forest of Dean during his tenure of this professorship. At Swansea he will have an excellent field for the display of his special qualifications, both as an organizer and as a geologist.

At the last meeting of the Court of Governors of the University College, Cardiff, Principal Trow referred to a new scheme for training health visitors for South Wales. A University diploma will be established on a two years' course of training, the Board of Education making a grant of £20 per annum for each student who qualifies at the end of the course. The course will be under the control of the Department of Preventive Medicine of the Welsh National Medical School. The main purpose is to train health visitors for service under public authorities, and when the scheme is in full working order it is not improbable that the Board of Education will recognize only those women who had gained this diploma. A new sphere of usefulness is therefore opened up for women, and it is very likely that many will be prepared to take up this profession. Dr. Trow also suggested that the Court and the governors of the National Museum should co-operate to the extent that the Curator of the Archaeological Section at the National Museum should act as the lecturer in classical and Celtic archaeology at the College. If some eminent expert could be attracted to take up such a post, Wales would have a good prospect of producing a group of distinguished native archaeologists.

It is remarkable that at this time of day there should be no

The Welsh Language.

unanimity as to the position which the native language should occupy in the schools. At Swansea and Carmarthen, for instance, the Union of Welsh Societies advocated its use as a medium of instruction in all the Welsh-speaking parts of Wales, and that our educational effort in Wales should be directed with the view of creating a purely Welsh "ideal" in the pupils and in the schools.

The Pontypridd Education Committee, after consulting the teachers in the town, have, however, expressed a directly contrary opinion, as they believe that such a plan is impracticable. We have also referred recently to the action of the Wrexham Authority in refusing to teach Welsh in the elementary schools under its control. Newport is another town which is not converted to this ultra-national policy with regard to Welsh. The Board of Education have been appealed to for guidance in the matter, but Sir Alfred Davies has rightly pointed out that the solution of this problem must of necessity remain with each locality, because it to a great extent can control the curriculum of the schools. Unless public opinion is in favour of giving Welsh its rightful position in the schools, nothing will be gained by attempting coercion with regard to it, so that the first thing which Welsh societies and similar organizations must do is to endeavour to convert the public generally to their views. Yet, in spite of indifference here and there, it is abundantly clear that the great mass of Welshmen believe that in their native language they possess an invaluable medium of instruction if rightly used, and that their status as a nation is really dependent on its preservation as a living tongue.

The Denbighshire Education Authority will shortly open two new secondary schools in the county—a secondary school at Colwyn Bay, and a girls' school at Ruabon. Both schools will be outside the

New Schools.

Welsh Intermediate Education Act for the present, but it is hoped that as soon as possible a new scheme will be passed, which will enable the county to convert them into intermediate schools.

The Welsh County Schools Association will give evidence before the Departmental Committee which is inquiring into free places in secondary schools. This question has a peculiar importance in Wales,

Free Places.

because such a large percentage of the pupils in secondary schools have previously been educated in primary schools. It is, therefore, essential to the success of higher education in Wales that a satisfactory scheme of transference of pupils from one type of school to the other be established. Up to the present, for example, it is generally agreed that the pupils from the elementary schools delay their entry into the secondary school too long—a practice to which the Welsh Department's scheme of secondary grants gives encouragement—and so it is hoped that one of the results of the Committee's investigations will be a distinct lowering of the age of entry. There are other matters, as well, which need readjustment. Miss Vivian (Newport), Miss Collin (Cardiff), Mr. D. E. Williams (Gowerton), and Mr. D. R. O. Prytherch (Penygroes) will present the case for the Association before the Departmental Committee.

SCOTLAND.

At the time the Education Act was passed it was commonly believed that the Education Department was decidedly opposed to the institution of the National Advisory Council in terms of Section 20 of the Act. There is certainly no indication of that in the constitution of the Council as now announced. Considering that all the members were nominated it is a surprisingly strong combination and should make itself felt as a force in Scottish education. There are twelve members in all. The teachers are represented by Mr. J. B. Clark (George Heriot's School, Edinburgh), Mr. Duncan MacGillivray (Hillhead High School, Glasgow), and Miss Mary Tweedie (Edinburgh Ladies' College); the Universities by Principal Sir George Adam Smith (Aberdeen) and Prof. Burnet (St. Andrews); central institutions by Dr. H. S. Stockdale (Glasgow Technical College); the Authorities by Sir Arthur Rose (Edinburgh), Mr. H. S. Keith (Lanark), and Miss K. V. Bannatyne (Glasgow); Labour by Mr. Owen Coyle and Mr. J. F. Duncan; and private-school administrators by Sir John Cowan. The teacher members are all highly esteemed as individuals by the profession, but there is very considerable indignation that they should all three have been drawn from the higher-class schools and that the claims of primary, rural, and denominational schools should have been completely ignored. Teachers will never be satisfied till they can elect their own representatives direct, and have not to depend on a nomination that is likely to exclude all but "safe" people.

It was expected that the reconstituted Provincial Committees

Training College Teachers on the Provincial Committees.

would come into being at the beginning of this month. But the House of Lords rose for the Christmas recess two days before the month's submission to Parliament required to give the minute relating to them legal effect, had been completed. The result is that the minute had to be relaid before Parliament at its assembly on February 10, and that the first meeting of the committees has of necessity been postponed till the end of March. Advantage has been taken of the delay to make one important change in the minute. Originally it read that the Educational Institute was to elect to each committee four representatives engaged in teaching in schools and colleges. Whether the Education Department intended "colleges" to include "training colleges" or not is not plain. But it was so interpreted by the teachers, and several members of the training college staffs were nominated as candidates. The new minute, however, disqualifies them by confining teacher representation to those engaged in primary, intermediate, and secondary schools. The Institute immediately protested on the ground that it was desirable that members of the training college staffs, elected to represent the profession, should be on the committees to provide an expert knowledge other members must necessarily lack, and pointed out that the change of minute was a retrograde one, contrary to the principle that teachers should, as far as possible, be directly represented on educational bodies. In spite of this, the Department has adhered to its minute. It is possible that it may be all the more ready on this account to acquiesce in the formation of some kind of Whitley Council for the training colleges. That would not only be the best solution of the difficulty, but be a valuable addition to training college organization.

The judgment given in Linlithgow Sheriff Court in the prosecution of a parent for the non-attendance of his two children contains many interesting points.

School Management Committees.

One of them concerns the powers of school management committees. The prosecution was instituted by the Linlithgow Education Authority. The Sheriff ruled that it was invalid on the ground (among other grounds) that attendance was the business of the local School Management Committee and not of the County Authority. The case is a useful reminder of the extent of the powers of these committees. In the original draft of the Education Act the School Management Committee was a rather impotent body, but in the Act as passed they received powers little short of those of the old school boards, always excepting the power to appoint and dismiss teachers. In large and scattered counties this is probably quite good, but, in the more accessible villages and towns where the central county authority is in close touch with the schools, they do not serve any very obvious purpose except to provide soft jobs for some of the dispossessed school board clerks. So far as teachers are concerned they have one new feature to distinguish them from the boards, in the presence of one or more teachers on their membership. That, it is to be hoped, will prevent the recurrence of some of the old abuses. If, however, one may read between the lines of a circular sent by the Educational Institute to the Authorities, protesting against the public discussion of school reports, the school board spirit has not yet wholly died in the management committees. The authorities themselves are for the most part enlightened enough to prevent practices of that kind. If they wish to keep right with their teachers, they should use both moral and legal influence to prevent such blunders on the part of the lesser committees.

With the great increase in the number of the junior staff of the

University "Readers."

Universities in recent years, the need for differentiation of grade among lecturers has become evident. In particular, it has been felt desirable that independent lecturers doing the work of a chair without professorial status should have some special designation. The first experiments in this direction were made by St. Andrews and Aberdeen, where one or two senior lecturers have been called readers in imitation of English practice. Though nobody seems greatly enamoured of the name, it has been accepted by all the universities for lack of a better, and has been given official recognition in recent Ordinances of Edinburgh and Glasgow. When the matter was under discussion at the Glasgow University Court, Dr. David Murray protested against it as very objectionable. The word "Reader," he pointed out, was not sanctioned in the history of Scotland farther than the old office of ecclesiastical reader, which had been out of existence in Scotland for two hundred years and had never had much respect when it existed. It was contended by one or two members of the Court that there was a wish for this special title on the part of the lecturers concerned. But if there is such a wish, it is certainly not a strong one. Probably most of those who are dissatisfied with the present name would be better pleased with a designation like Associate Professor, which would indicate the part they are

playing in university life. If, however, the new name brings with it an improvement of status, those who are to bear it will not grumble. It is a scandal that they have hitherto been excluded from any share in the governing bodies of the universities, and even more a scandal that they should have been paid so much worse than their professorial colleagues, even while doing as much and as responsible work. Unless there is considerable change for the better in these respects, the universities will cease to get men of the high type they have hitherto got, in spite of names and titles.

The resolution of the St. Andrews Congress in favour of education chairs being established in Glasgow and Aberdeen has been speedily followed up by the Glasgow Branch of the Institute. At the last monthly meeting of the Branch the chairman,

The Institute and Education Chairs.

Mr. McNeil S. Snodgrass, put the case in frank terms. They had looked to wealthy people outside the profession to provide money for the Education chair, which was one of the clamant needs of their own university, and it had not been forthcoming. It would be more satisfactory in every way for them to provide the money themselves. Teachers were not very rich people at the best, but collectively they could raise a large sum for an object like this, which deeply concerned the educational well-being of the country. The proposal was adopted with enthusiasm, and it was mentioned that the other branches in the west of Scotland were heartily in sympathy with the idea. It only remains for the Glasgow Committee, in company with those of the neighbouring branches, to convert enthusiasm into cash and get their members to prove their zeal for education by helping to found an Institute chair in Education at an early date. If the movement meets with the success it deserves, Aberdeen will probably be quick to follow the example of Glasgow. A considerable part of the endowment for an Education chair in Aberdeen has already been provided by the Carnegie Trust. The local teachers should surely be able to contribute the rest.

The judgment pronounced by the seven judges of the Justiciary Appeal Court regarding the status of school and college janitors is one that is likely to make it necessary for educational institutions to address themselves to Parliament for relief. George Heriot's Trust, Edinburgh, appealed against a decision of the Midlothian J.P. Court, in accordance with which the Trust was fined £5 for employing a janitor at the Heriot Watt College without a licence. Janitors in scholastic institutions, both in Scotland and England, have not hitherto been regarded as "male servants" within the meaning of the Customs and Inland Revenue Act, and the Trust contended that they were not liable under the Act. By a majority of four to three the judges confirmed the judgment of the lower court. The Lord Justice-General took the view that the duties of a janitor and those of a porter were identical. He disagreed with English decisions to the effect that a servant like a janitor only comes within the Act when his services are personal, domestic, or menial. As against this, Lord Anderson, one of the minority, was of opinion that the main duties of the janitor were not those of a house-porter. His main duties were to take care of the buildings, and that made him as much an official of the establishment as the professors and lecturers themselves. Though two of the judges said that this could not be regarded as a test case, it looks as if janitors in institutions of learning must henceforth be regarded as "male servants" and licensed accordingly—at any rate, till the law is changed.

Appeal is being made to the teachers of Scotland for contributions at the rate of 6d. per £ of the monthly salary for three months, in order to secure a capital sum sufficient to carry on the sustenance of disabled teachers and the dependents of teachers who fell in the war. £50,000 was contributed to the previous fund for war relief. Of this, £26,000 was invested for this special purpose. The annual revenue from this investment, however, amounts only to £1,370, whereas the sums disbursed to the forty odd beneficiaries amount to nearly £2,000. Consequently, if the grants are not to be very considerably reduced, or the fund exhausted long before the need for it is past, the teachers must put their hands in their pockets once again. Fortunately, with the return of superannuation premiums and the paying up of deferred salaries, the pockets are for the most part well lined just now, and the appeal is certain to meet with a generous response. It may be added that in the Trust Deed provision is made for the disposal of any ultimate surplus. In the event of a surplus the Committee responsible for administering the fund are to have power to hand it over to societies or institutions having for one of their primary objects some charitable purpose for the benefit of Scottish teachers or their dependents, and the present Benevolent Fund is specially mentioned as the probable residuary legatee. That is twenty-five years ahead. It may be expected, however, that long before that time the Institute will have made

some more satisfactory provision for teachers who fall out by the way. But the intention is right.

IRELAND.

The Deputation of the English Labour Party, which came to Ireland the last week of January to examine for themselves the present state of the country, showed a deep interest in the education question.

Labour and the Irish Bill.

On the first day they were in Dublin they received deputations from primary and secondary teachers, heads of schools and assistants, and were clearly impressed by the need of reform. A week later, on the last day of their stay, when they were in Belfast, they received similar deputations from the teachers in Ulster. Mr. Adamson, the chairman of the Labour Party, stated that they were appointing a committee to consider the Education Bill, and asked the different deputations to send in their statements so that they might be looked into more carefully. On one point he and Mr. Henderson were very emphatic, that it was through no fault of their Party that the Bill failed to obtain a second reading. The Labour Party certainly stood for two things in education: first, that there should be ample facilities for everyone—no matter of what class—to receive the best possible education; and secondly, that the teachers should be given remuneration adequate to enable them to devote all their energies to their important work without being distracted by anxiety about making both ends meet. It may be that, before these lines appear, the fate of the Bill will be decided one way or the other, but teachers in Ireland are fully persuaded that the Labour Party will give it sympathetic attention.

On the other hand, formidable opposition meets the Bill from a dangerous quarter. The Roman Catholic Bishops' meeting at Maynooth have repeated the denunciation of it which was issued in December by their Standing Committee. Their language is very forceful, and more fulminatory than argumentative. It carries, however, tremendous weight in all Roman Catholic quarters, especially as orders were given that their resolutions should be read in all their churches. The result is a renewal of resolutions of condemnation by all kinds of bodies, such as town and county councils, many of which have in all probability never read a line of the Bill. One old standing member of the Dublin Corporation said he was against the Bill because the bishops were against it, although he believed it was a Bill with many good provisions. The bishops' resolutions were as follows:—(1) "Until Ireland is governed by her own Parliament, we shall resist by every means in our power any attempt to abolish the Boards of Primary, Intermediate, and Technical Education." (2) "The Bill is an attempt on the part of the British Government to grip the mind of the people of Ireland and form it according to its own wishes. We are convinced that the enactment of the measure would deprive the bishops and clergy of such control of the schools as is necessary for that religious training of the young which Leo XIII declared to be a chief part of the care of souls." (3) The next resolution declares that if the Bill is forced on the country the bishops would issue instructions to Catholic parents "in such a deplorable crisis." (4) The next resolution opposes rates for education in Ireland. (5) The last resolution expresses "intense sympathy with the teachers" and promises to do everything possible to secure fair treatment for them. It will be seen that these resolutions contain no argument. In justice to the Bill it should be said that there is a clause dealing expressly with religious instruction in national schools which runs thus: "In the execution of their powers and duties the Department shall ensure that the principles and practice which at the time of the passing of this Act govern religious instruction in national schools in receipt of grants from the Commissioners of National Education in Ireland, are adhered to after the passing of this Act in national schools in receipt of grants from the Department." This clause should secure the maintenance of the present system which is regarded as satisfactory in national schools; if it is not strong enough it could be amended. The religious difficulty has never existed in secondary schools in Ireland. The proposed Department of Education, as stated in our last month's notes, has been generally criticized as not satisfactory, and could be amended to meet reasonable objection, but the bishops will have nothing to do with amendments. Nor do they take any account of the fact that the Bill is based upon recommendations by two Commissions on both of which Roman Catholics had a large number of representatives, including both chairmen.

Roman Catholic Opposition to the Bill.

The associations of teachers which are mainly associated with Roman Catholic schools have, during the winter, come out more and more decidedly in favour of the Bill, as embodying progressive educational ideas and containing large elements

National School Teachers and the Bill.

of popular representation. Resolutions in its support have been passed all over the country, and this is a very remarkable fact considering the determined attitude of the bishops. It need hardly be said that Protestant organizations of all kinds are united in urging that the Bill be passed as soon as possible.

The position with regard to the salaries of intermediate teachers can be seen in the Report of the Intermediate Board on the application of the Teachers' Salaries Grant for the school year 1918-19, which has just been published as a Parliamentary paper. This is the more interesting as the salaries include not only the Birrell Grant but also the Duke Grant, or such amounts of them as were passed on from the school authorities to the teachers. The return, which gives the salaries in detail, states that the total number of intermediate schools furnishing returns was 353, and the total number of intermediate pupils—i.e. pupils between twelve and nineteen years of age—was 21,182. Of these, 235 schools with 14,762 pupils were under Roman Catholic management, and 118 schools with 6,420 pupils were under non-Roman Catholic management. According to the rules there should be one properly qualified lay teacher for every forty pupils in each of the two sets of schools. Hence the Roman Catholic schools should have 369 and the non-Roman Catholic schools 161 such teachers. The return gives 318 in Roman Catholic and 407 in non-Roman Catholic schools. The Roman Catholic schools have also 156 nuns and 24 members of brotherhoods otherwise duly qualified who claim to be lay teachers, the decision on which point is left to His Excellency the Lord-Lieutenant. Of non-qualified lay teachers there are 188 in Roman Catholic and 383 in non-Roman Catholic schools. The minimum salary under the Birrell Grant is £140 for men and £90 for women, non-resident; and £110 for men and £70 for women, resident. Under the Duke Grant the salaries are £20 higher all round. Of the properly qualified lay teachers in Roman Catholic schools there appear to be 36 men teachers non-resident, 4 resident, and 6 women teachers non-resident and none resident, who receive more than the Duke minimum; while in non-Roman Catholic schools (omitting head teachers) the numbers appear to be 82 men teachers non-resident, 26 resident, and 65 women teachers non-resident and 22 resident. The highest salary in a Roman Catholic school for a non-resident male teacher is £200 and resident £150, for a non-resident female teacher £140 and resident £90. In non-Roman Catholic schools the highest salary for a non-resident male teacher is £410, resident £246; for a non-resident female teacher £228, resident £210.

Various associations have been holding their winter meetings. The Classical Association held its annual meeting in Queen's University, Belfast, on January 30, when Prof. Henry, the president, delivered his inaugural address on "Lucretius." The Vice-Chancellor gave a reception for the members in the afternoon. The Central Association of Irish Schoolmistresses held its annual meeting in Alexandra College, Dublin, on February 6, when Miss Amis, of University College, Aberystwyth, delivered a lecture on "The Influence of the Unconscious on our Daily Life." A series of four lectures on Modern Geography was organized by Prof. Cole in Dublin on "Ireland and the Atlantic," "The Early Stone Age and the Spread of Man in Europe," "Horses and their Kindred: Some links in geographical history," and "The Greek Race: its origin and early geographical distribution."

The Department of Agriculture and Technical Instruction have issued circulars announcing an examination in the Principles, Methods, and History of Education with special reference to Science Teaching on June 19; Easter Examinations on April 10 for Teachers' Qualifications in Experimental Science and Domestic Economy; a Special Examination on June 15 and 16 for Teachers' Qualifications in Manual Training (Woodwork); Examinations for Science and Technological Scholarships and Teacherships-in-Training in the week beginning Monday, June 21; and examinations to be held in May for technical schools in commerce, building trades, applied chemistry, electrical engineering, mechanical engineering, domestic economy, and art. They have also published a full timetable of the Technical School Examinations.

SCHOOLS.

FRANCIS HOLLAND SCHOOL.—In the examination held by the Société Nationale des Professeurs de Français en Angleterre, which is open to all boys and girls under twenty, the gold medal and three prizes were awarded to Miss Eleanor Antrobus, a pupil at the Francis Holland (Church of England) School, 39 Graham Street, Eaton Square. Five other prizes and sixteen certificates were won by pupils at the same school.

At all crises in the world's career history has been studied from the political point of view and interpreted for political purposes. When, for instance, Rome fell before the Visigoths, in the fifth century of the present era, the history of antiquity was canvassed on one hand by pagan writers who sought to maintain the thesis that Rome, which had remained inviolate for eight hundred years, had perished so soon as the worship of the old gods had been suppressed; and on the other hand by Christian apologists like Augustine and Orosius, who showed that there is a natural history of empires, that many had risen and fallen before Rome, and that Rome had perished properly of her own vices. Again, when at the Reformation the unity of medieval Christendom was broken, Catholic controversialists on one side and Calvinistic on the other traversed the annals of the Middle Ages, seeking to justify their actions at the time of writing by considerations drawn from the records of the previous thousand years. So now, in this turbulent present, when the ideas of the French Revolution and the principles of Napoleon have come to maturity in an unparalleled political and social upheaval, do many writers turn to the past, and seek to find from the history of the modern world some clue to the meaning of the present and some guide for the conduct of the future.

The six writers whose recently published books are enumerated at the head of this article all have this characteristic in common: that their prime interest is in the present, and that they study history mainly in order that they may gain light on existing problems.

(1) Mr. Llewelyn Williams, Recorder of Cardiff, presents a valuable collection of studies centring round the Tudor Settlement of Wales. Its purpose is "to describe the transformation of medieval into modern Wales." Based largely upon original authorities, it tells, with a fullness hitherto wanting, the story of the decay of Catholicism in the Principality. Hence it explains with a new completeness the enigma of the uncompromising religious attitude of the present-day Welsh Nationalists. Two chapters at the end, on Welsh nonconformity and the Welsh language, are of the nature of appendixes to the main studies.

(2) Prof. de Sumichrast undertakes the important task of explaining to the people of this country the traditions and the ideals of the American people. He is well qualified for the work, for he was once a teacher at Harvard University. Later he came to England, and during the war he was an officer in a Middlesex regiment. It would appear from Prof. de Sumichrast's narrative that the "making of America" is not yet complete, unless we may regard the Prohibition amendment to the Constitution as applying the finishing touch: for that is the last event here recorded. The book, indeed, furnishes an excellent brief summary of American history from the time of Columbus to the present day.

(3) Dr. Gilbert Slater's "Making of Modern England" is a reprint (cheap in current conditions) of a book which originally appeared early in 1913. It surveys England from the peace of 1815 to the Parliament Act of 1911. Its standpoint is that of Ruskin College, Oxford. It, therefore, pays prime attention to social, industrial, and educational advance.

(4) Mr. F. R. Worts, a new and capable writer, whose recent book on "Citizenship" has been well received and justly praised, has provided a useful Sketch of British In-

(Continued on page 166.)

The Progress to Reading.

An entirely new method of teaching Reading partly phonic and partly designed on lines of interest.

Edited by RICHARD WILSON, D.Litt.

With coloured and other Illustrations.

THIS SERIES CONSISTS OF

British Conversational Pictures. Twelve large Nursery Tale Pictures reproduced in full colour from drawings by G. DEMAIN-HAMMOND. Intended for use in the story-telling lesson and for conversational exercises preliminary to reading. Single Pictures, cloth rollers, and varnished, 5s.; unmounted, 8s. Set I, pictures numbered 1 to 6, and Set II, pictures numbered 7 to 12, mounted on linen and attached to wooden roller, per set 25s.

The Picture Book, 10d.—The First Primer, 1s.—The Second Primer, 1s. 3d.—The Infant Reader, 1s. 6d.—The Preparatory Reader, 1s. 6d.

Teacher's Handbooks, Parts I-V. 1s. 6d. each. Complete, 6s.

An English Grammar for Higher Standards and Junior Teachers. By T. G. TUCKER, Litt.D. Limp cloth. Part I. 1s. 6d. Parts II and III. 1s. 6d. KEY. 3s. 6d. net.

Lay's Pupil's Classbook of English Composition. By ED. J. S. LAY, author of "The Pupil's Classbooks of Geography, History, The Vegetable Garden," &c. Illustrated. Book I (for children of 9 to 10). Sewed. 1s. Book II (for children of 10 to 11). Sewed. 1s. 3d. Book III (for children of 11 to 12). Sewed. 1s. 8d. Book IV (for children of 12 to 13).

*. Also in Limp cloth. Ready immediately.

Lay's Pictorial Atlas of English History. Arranged by ED. J. S. LAY, author of "Constructive Work," &c. Sewed. 1s. 6d.

SIXTH EDITION ENLARGED.

Alcohol and the Human Body. An introduction to the Study of the Subject, and a Contribution to National Health. By Sir VICTOR HORSLEY, C.B., F.R.S., and MARY D. STURGE, M.D. With a Chapter by Sir ARTHUR NEWSHOLME, C.B., M.D., and a Chapter written in collaboration with Sir LEONARD ROGERS, C.I.E., and a Chapter written in collaboration with C. W. SALEEBY, M.D., F.Z.S. Illustrated. 8s. net.

Introduction to Commercial Geography. By T. FRANKLIN and E. R. SHEARMUR, B.Sc. 68 pp. 25 Maps and Figures. 2s. 8d. net.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

dustrial History from the middle of the eighteenth century to the present day. Mr. Worts does not hesitate to express strong and sound opinions when occasion arises. He says of the strike weapon, for example, "although it has been wonderfully successful during the modern period, it must now be regarded as an out-of-date weapon. It must be given up. The plain truth is, the nation cannot afford it. It is too destructive."

(5) Dr. C. D. Hazen, whose book on "Europe since 1815," published some six years ago, established his reputation as an authority upon modern Continental problems, in his new work sketches the history of Europe from 1870 to 1919. He considerably modifies his former opinion of Germany, and he has no sort of doubt that at her door lies the responsibility for the great world war. Dr. Hazen's account of the events that led to the war is masterly and convincing. Of great value, too, are the pages in which he treats of the attitude of America to the conflict during each of the critical phases of the five years 1914-1919.

(6) Mr. H. W. Harris writes a vivid and intimate account of the recent peace-making at Versailles. As a biographer of the American President, he not unnaturally assigns to him the leading rôle in the drama. As a correspondent of the *Daily News* he does not tend to exaggerate the virtues of Mr. Lloyd George as a diplomat. Nevertheless, on the whole his story is as impartial and as well-informed as is to be looked for at a date so soon after the conclusion of the events narrated. The book ends with a note of interrogation which may well form the termination of this brief review article. "And now — ?"

EDUCATION.

The Future and the Public Schools. By C. H. GRAY.
(2s. net. Nisbet.)

These 64 pages present the views of a very young Public School man, who tries to hold the balance true between Mr. Waugh and Mr. H. G. Wells. He maintains that we must look for truth only to those who are quite in the inner circle of the public schools or quite outside it. One would hardly think that anyone could be further within the sacred circle than the former head master of Eton. Yet Mr. Gray assures us that "the nonsense of such men as Canon Lyttelton" appeals only to superficial thinkers. The little book claims to represent what the New England is thinking, and maybe it does. In any case, without taking it too seriously we welcome the outburst. We older people probably need stimulation, but our young stimulators will get at us better if they avoid English like this: "Society is better, in theory infinitely, in practice usually considerably, than anarchy."

The Heart of a Schoolboy. By JACK HOOD. With a Preface by Canon BURROUGHS. (3s. 6d. net. Longmans.)

The charges of intellectual and moral inefficiency brought against the public-school system culminated—so far, at least, as the popular mind is concerned—in Mr. Waugh's book, entitled "The Loom of Youth." One reply from the schoolboy's point of view, that of Martin Browne, was noted in these columns some time ago; and now comes another, similar in scope yet sufficiently independent, from the pseudonymous "Jack Hood." Notwithstanding that the attack and the replies necessarily relate chiefly to personal experience in a single school, it is important to have on record the frank opinions of those who have recently gone through the mill. "Jack Hood" has written an interesting book, and the commendation by Canon Burroughs is well deserved.

The Training of the Mind and Will. By W. TUDOR JONES. With Foreword by ALEX HILL. (2s. 6d. net. Williams & Norgate.)

During the years of the war, Dr. Tudor Jones lectured to tens of thousands of soldiers and sailors, industrial workers, and Y.M.C.A. gatherings; and that he lectured acceptably, even on subjects usually regarded as abstruse, is evident to anyone who peruses this book. It is not often that the philosophically minded man is able to take the point of view of an uneducated or half-educated audience, but Dr. Jones has succeeded in doing so. He set himself to convince these boys and men that they were more than they knew, and could be more than they were; and to persuade them to take themselves thoroughly in hand, in order to realize more fully the possibilities of their nature. The book should win its way to still larger audiences of the same kinds as the original, and should be valuable to all who take part in adult education.

Self-Health as a Habit. By EUSTACE MILES. (5s. net. Dent.)

Self-help by Samuel Smiles; Self-health by Eustace Miles. The verbal jingle is obvious, and apparently (see page 14) had occurred to the later of the two prophets, but while the compound "self-help" may pass as good English, the etymological justification of "self-health" cannot so readily be conceded. At any rate, the author means by self-health that sort of health which "is not dependent on drugs, inoculations, operations, rest-cures, and the elaborate details of so-called 'hygiene,'" but which "is gained and preserved by what each can do for self without conspicuousness." Mr. Miles's general aim is to raise the standard of what is meant by good health above that which exists to-day and which appears to satisfy the medical profession, and at the same time to suggest simple and natural means by which the higher standard may be attained. To most people his name is inseparably connected with a restaurant not a hundred miles from Charing Cross, at which the *menu* is either scientific and satisfying or "faddy" and unsatisfying, according to your tastes and habits. All we can say is that the book before us, chatty and discursive though it may be, contains a mine of sound and sensible advice calculated to help people to keep well if they are well, and to get better if they are troubled by ailments which are too readily regarded as part and parcel of modern civilization.

HISTORY.

A History of Everyday Things in England. Part II: 1500-1799. By M. and C. H. B. QUENNEL. (8s. 6d. net. Batsford.)

Those who last year became the fortunate possessors of Part I (A.D. 1066-1499) of this original and fascinating history have been eagerly anticipating the publication of the second and concluding part which now lies before us. They will not be disappointed. The same skilled artistry and the same high literary ability combine to make this modern part as attractive as its medieval predecessor. We here learn much concerning the common life of our ancestors during the three centuries that divided the Renaissance from the Revolution. Costumes, buildings, sports, modes of travel, methods of cooking, types of shipping, instruments of industry and of war—all are depicted and described with unfailing felicity and lambent humour. Old England lives again in these vital pages. It lives, however, in its reality, and not in the romantic "tushery" of the second-rate historical novel. It is an England we love to read about; but an England which we would not recall even if we could.

Westminster: a Historical Sketch. By Rev. H. F. WESTLAKE. S.P.C.K. (3s. 6d. net.)

Mr. Westlake has won an honourable rank among medieval historians by his works on the "Church of St. Margaret" and the "Parish Gilds of England." The present sketch, slight as it is, will not detract from his reputation. It contains the results of not a little original research, and it is written in a thoroughly readable style. Its maps and its eight illustrations are valuable additions to its information.

Our Guardian Fleets in 1805. By H. W. HOUSEHOLD. (3s. net. Macmillan.)

This is the third of Mr. Household's admirable studies of British Sea Power. It follows as a natural sequel to his "Fighting in the Days of Sail," which covered the naval wars of the seventeenth and eighteenth centuries. It is written on a different scale, however, as befits the importance of its theme. As Nelson stands out as the supreme seaman of all time, so does the Trafalgar Campaign rank pre-eminent among all maritime conflicts. Mr. Household provides a clear and succinct narrative of the events of the critical year 1805, following in the main the authoritative guidance of Sir Julian Corbett.

The Violet Crown and the Seven Hills. By E. M. BURKE. (3s. net. Herbert Russell.)

Under the above title Miss Burke presents a brief epitome of Greek and Roman History. She adopts the same scheme as that which she employed in her previous handbook on "The Shining East." That is to say, she aims at showing the essentials of the ancient civilizations rather than at repeating in detail the oft-told political narratives. Her books are useful to children and others who do not want to remain ignorant of early history, but cannot afford much time for its study.

Our Wonderful Cathedrals. Second Series.

By GERTRUDE HOLLIS. (3s. 6d. net. S.P.C.K.)

The series of sketches contained in this volume deals with the cathedrals of Oxford, Chichester, Worcester, Ripon, St. Albans, Exeter, Carlisle, Gloucester, Peterborough, Chester, and Norwich. The letterpress relating to each of these buildings is necessarily very brief, but it brings out the few essential and distinctive features. The charm of the little book depends to no small extent upon its numerous illustrations. There are over forty in all, eight of them being beautifully coloured.

(Continued on page 168.)

MASTERS wishing to see specimen copies of Murby's well-known new Scripture Manuals on

II SAMUEL by G. W. Wade, D.D., and Rev. J. H. Wade, M.A.
ST. MATTHEW ST. LUKE } by Dr. C. Knapp

Supplies School Prizes, School Text Books, and other School requisites. He also deals largely in *Second-hand Books*, and will be glad to report prices at any time. Best offers made for suitable *Second-hand Books*, either libraries, or single copies, to those wishing to dispose of them.

A MESSAGE TO VIOLIN LOVERS.

We have the finest stock of **New Violins** and many **Old Violins**, and sell them at their actual tone value, regardless of maker, history, and label.

Amateurs and professionals looking for a good-toned, well-made violin, should keep in touch with us until suited. Fine reproductions of famous makers—Stradivarius, Guarnerius, Maggini, Vuillaume, are continually provided by us.

We would welcome your inquiries, and request that our ever-changing lists of **Old Violins** and **Violin Music** may be sent to you periodically.

Name

Address

Please say if interested in a new or old instrument.

New Violin..... Old Violin.....

Approval period arranged with responsible parties.

Old violins bought or taken in exchange.

HAWKES & SON, Denman St., Piccadilly Circus, London, W. 1.

MATHEMATICS.

"School Mechanics."—Part I: *School Statics* (without Answers). By W. G. BORCHARDT. (6s. Rivingtons.)

Mr. Borchardt adopts the plan, now largely favoured by teachers, of making experimental work a leading feature in an introductory course on statics. It seems to be generally agreed that the historical order of development of the subject is also one well adapted to didactic purposes, and the book begins with a discussion of the mechanics of the lever, the oldest of machines. Thus, the treatment of moments and parallel forces precedes that of the parallelogram of forces. There is an abundance of examples, numerical and graphical, in addition to directions for carrying out experimental verifications of the principles enunciated. All the experiments described can easily be performed in any school laboratory, and a careful study of the results obtained will give the pupil a much firmer grasp of the subject than the working of ordinary examples will furnish. There is little in the book calling for criticism, but we must point out that the theory in sections 70, 71 is not applicable to experiment 20. In the experiment the friction is that between rolling bodies, while the theory is concerned with that between bodies sliding on one another. The table entitled "Approximate Values for Friction" (page 112) does not give the value of the friction between the cylinder and the plane. It is composed of several terms, but the principal part arises from the friction between the pulley and its axle, and is nearly proportional to $P \sin \frac{\alpha}{2}$.

Unified Mathematics. By Prof. L. C. KARPINSKI, Prof. H. Y. BENEDICT, and Prof. J. W. CALHOUN. (10s. 6d. net. Harrap.)

This is a course of mathematics for students in their first year at a university, and includes algebra, trigonometry, conics, and elementary analytical solid geometry. There are no great novelties in the presentation of the theory, but the writers have taken considerable pains to render the course attractive by the inclusion of numerous examples possessing intrinsic interest and importance. We have nothing but praise for the remarkably clear and carefully constructed diagrams, whose value is greatly enhanced by the employment of rectangular or polar co-ordinate lines of reference. Photographs are given of famous bridges whose geometrical characteristics furnish material for examples on the conics. The chapter on wave motion is illustrated by photographs of voice vibration records, alternating current oscillograms, rods and crank arms in automobile and locomotive engines. The war provides problems relating to range-finding and the rate of healing of wounds. Considerable attention is paid to the history of the subject, and the student is familiarized with the names and discoveries made by mathematicians from Ahmes onwards. Although certain American features render the use of this book in classes on this side of the Atlantic impracticable, teachers will obtain much profit and many useful suggestions from a perusal of its pages.

Elements of Vector Algebra. By Dr. L. SILBERSTEIN. (5s. net. Longmans.)

The author describes this slender volume as a synoptic presentation of the elements of vector algebra designed to meet the needs of those engaged in geometrical optics. It covers, with some amplification, the corresponding ground in the author's "Vectorial Mechanics" and in Heaviside's "Electromagnetic Theory"; Heaviside's notation being employed. The developments required in mathematical physics, involving the use of differential operators, are, of course, outside the range of the work. While one may be unable to accept the author's opinions of the value of the vector notation in numerical computation, there can be no question regarding the importance of the vector concept. Ability to think in vectors should be cultivated, and beginners will find this a very useful introduction to the subject.

MODERN LANGUAGES.

Mr. P. Selver, whose "Anthology of Modern Slavonic Literature in Prose and Verse" (Kegan Paul, 5s. net) was reviewed in our issue for January (page 56), writes:

"In the January issue of *The Journal of Education* my 'Anthology of Modern Slavonic Literature' receives a notice which begins as follows:—'Mr. Selver's anthology contains (his own?) translations from . . . &c. Let me point out to the writer of this that, if he had taken the trouble merely to look at the title-page of a volume which he professes to review, he would have been left in no doubt that all the translations in the book are by me.'"

Our reviewer wrote the title of the book as an anthology "compiled by" Mr. Selver instead of "translated by," as is clearly given on the title-page. He very much regrets the mistake and is sorry inadvertently to have done Mr. Selver an injustice.

"Grant's French Classics."—(1) *Les Plaideurs*. By RACINE. (2) *On ne badine pas avec l'Amour*. By DE MUSSET. (3) *Lettres et Pensées*. By Mme DE SÉVIGNÉ. (4) *L'Art Poétique*. By BOILEAU. (5) *La Petite Souris Grise et Autres Contes*. By Mme DE SÉGUR. (6) *Fables*. Books I-II. By LA FONTAINE. (7) *Le Cid*. By CORNEILLE. (8) *Une Passion dans le Désert*. By BALZAC. (9) *Contes de Fée*. By PERRAULT. (10) *Micromégas et Jeannot et Colin*. By VOLTAIRE. (11) *Oraisons Funébres*. By BOSSUET. (12) *Les Précieuses Ridicules*. By MOLIERE. Edited by DE V. PAYEN-PAYNE. (Each 4d. net.)

This series will be found useful, not only by the private reader, but also by teachers who wish to provide their pupils with literature to read out of school or who need cheap editions for rapid reading in class. The number of pages in a volume ranges from twenty-five to forty, the print is small but clear—for some reason usually clearer in the prose than in the poetry—and those who have no objection to columns will find the little volumes quite pleasant reading. Each work is prefaced by a short introduction containing a brief account of the author and a little sober criticism. It is not very easy, however, to know what the editor means when he says: "Molière is the embodiment of the Gallic genius in his independence, his impatience of restraint, and his belief in common sense." Is there anything specially French in these qualities? Nor should we call Voltaire's "Siècle de Louis XIV" "the model of political history." However, these are small blemishes; in general, the introductions are sound and useful. Mr. de Payen-Payne has, in this first dozen, kept to the beaten track; but the series is to be continued, and perhaps as it grows he will give us some of the less known gems of French literature as well as the old favourites.

SCIENCE.

Health in the Home. By A. KNYVETT GORDON. (5s. net. Jarrolds.)

Mr. Gordon here provides parents and others responsible for the care of children with a helpful guide as to what to do both in emergencies and in the everyday task of securing the healthy development of the bodies and minds of their charges. He has also much sane and valuable advice for adults, which will assist them in securing and maintaining health. He writes as one in authority, but with a sympathetic knowledge of human weaknesses. His remarks on the use and abuse of tobacco and alcohol are reasonable and temperate; in fact, throughout the book his style inspires confidence, and his clear exposition makes understanding simple. We cordially recommend the book to all who require trustworthy and modern counsel from an experienced doctor in the thousand and one difficulties which parents and house masters are called upon to handle.

A Manual of Physics. By Dr. J. A. CROWTHER. (16s. net. Frowde, Hodder & Stoughton.)

The author states, in his preface, that this book is intended, in the first place, for first year medical students. As regards the scope of the work and the arrangement of subjects, it will admirably meet their requirements, but it is doubtful if the treatment is sufficiently full for ordinary science students. The usual order of subjects is followed—mechanics, heat, light, sound, magnetism, and electricity. The treatment of heat and light appear to be sufficiently full, but that of sound is very short, and the subject of current electricity might with advantage have been dealt with more fully. The descriptive matter is clear and concise, but certain slips naturally occur. For example (page 7): 22 feet per second is not 16 miles per hour; (page 394), it is some twenty years since the magnetic declination in this country was 17°; (Figs. 236, 237, and 238), the lines of force should be at right angles to the conducting surfaces upon which they arise, as the student is told on page 222. More serious, however, is the statement, on page 169, that specific heat is a "ratio." It is curious how this statement survives in many elementary textbooks, although all other physical quantities, even latent heats, are defined from unit conditions. How would the author define the specific heat of, say, copper when cooling from 200°C. to 150°C.? Again, the experiment indicated on page 167 is too inexact to take as a foundation for the discussion of quantities of heat. One would gather from page 168 that it is quite an easy matter to determine accurately the amount of ice melted when a hot body is placed on a block of it. Several figures are drawn without due regard being paid to reality. Thus, the bending of the support in Fig. 72 would have more effect on the micrometer than would the expansion of the tube; the weight in Fig. 117 is quite inadequate to produce the required effect; and Fig. 188 is likely to mislead the student. The confusion between potential difference and electromotive force which is usually found in textbooks is not satisfactorily removed.

(Continued on page 170.)

WM. HUNT'S
OXFORD "IDEAL"
 LOOSE-LEAF
EXERCISE BOOK.
 (Patent.)

WM. HUNT'S Patent "Ideal" LOOSE-LEAF NOTE-BOOK constitutes the best and most convenient Higher Form and Science Class Exercise Book, Lecture Note Book, Loose-Leaf Scrap Book, Storage Covers for Notes, Letters and Papers of all sorts yet invented. The Book opens perfectly flat for writing, and binds up absolutely securely; can be un-made and re-made and the leaves transferred from one book to another or new leaves added in any manner without trouble and without risk of disarrangement or loss. No rings, posts, arches, or mechanism of any sort. Only one book necessary for many subjects, (each subject can be transferred to its own distinctive cover as convenient). 18 sizes and several qualities. Capacity one leaf or 300 with no waste bulk. "IDEAL" for preserving NOTES OF LECTURES and other matter in convenient and easily accessible form.

Showing the Book containing 300 sheets of paper closed. The Divisible Lace is here shown joined, by inserting the Pointed Tag into the Barrel Tag. When the Book is in use the Lace should be joined as above only. When not in use the lace ends may be tied in a bow knot. The Book automatically accommodates itself to any number of leaves, few or many, with no waste bulk.

Showing the manner of changing leaves. A leaf is shown withdrawn from one Divisible Lace before withdrawing it from the other.

DISCOVERY

A MONTHLY POPULAR
 JOURNAL OF KNOWLEDGE

Edited by A. S. RUSSELL, M.C., D.Sc.

Trustees - Sir J. J. THOMSON, O.M., P.R.S.; Sir F. G. KENYON, K.C.B., P.B.A.;
 Prof. A. C. SEWARD, Sc.D., F.R.S.; Prof. R. S. CONWAY, Litt.D., F.B.A.
 Chairman of Committee - THE REV. CANON W. TEMPLE, D.Litt.

DISCOVERY is the outcome of a Conference called by the Presidents of the Royal Society and the British Academy, and many of the principal learned Societies and Educational Associations are giving it their active support.

DISCOVERY presents in a popular form a first-hand account of what experts are doing, or have done, in all the chief branches of knowledge. The articles, singly or in a series, deal with their subjects in such a way as to make clear the interesting features in the discoveries with which they deal, and are written in plain language by contributors who can speak with authority, so that the teacher or general reader who has no time to pursue specialized study—or, if he has, can do so in only one subject—will be able to obtain at first hand an account which he can understand of the advance made in the principal subjects in which investigations are being actively pursued.

DISCOVERY

PRIZE COMPETITIONS.

THE winner of the January competition is Miss Florence Rahilly, St. Anne's College, Sanderstead, Surrey.

The Prize for the February competition is awarded to "Bésigue," and the second place to "Pioneer."

Extract from Paul de Saint-Victor's "Victor Hugo."

By "BÉSIGUE."

Spain is the land of extremes. Cheek by jowl with Sallust's hardened egotism the poet has placed Caesar's unbridled generosity, gay thoughtlessness contrasted with carking care. This admirable creation is a world in itself. All the beggars, gitanas, and adventurers of the Castiles are embodied in this knight of the cheerful countenance. Gather together, in a fantastic parliament, the immense population of the Bohemias of poetry, and Caesar will be proclaimed their rightful king. What impudence and what madness! What dignity beneath his poverty! In his most extravagant freaks I can picture Don Quixote cutting capers on the "poor rock." His gaiety is irrepressible, his mockery throws out rays of light, his irony has wings, the coruscations of his fancy

would make those of Shakespeare's Mercutio seem pale. Like Buckingham's costume, this zingaro's ragged cloak scatters a shower of pearls.

Never was a more picturesque figure produced on the stage. Each word poses him, each gesture portrays him in an unexpected attitude. It is a succession of extravagant and charming silhouettes. His natural lively humour is so varied and so exuberant that in radiating from him it assumes a thousand fanciful forms. In the marvellous interlude of the fourth act he is left almost alone, and then at the sound of his voice the stage is filled, like a necromancer's laboratory, with laughable figures and droll apparitions. Singing is heard at the wine-shop, the inn is crowded, the alguazils go their rounds; clerics and schoolboys pass, on the look-out for windfalls. Lucinda pops her slattern's unkempt head of hair through the garret window of her lodging; Goulatromba, his slouched hat over his eyes and rapier on hip, comes in sight before the door of a hovel, hugging a wine-skin, like the drinker painted by Velasquez. . . . The whole of picaresque Spain is laid before us in this wonderful living poem. On one side he almost touches the East; "yellow and blue women" are seen; minarets and stakes are descried on the horizon.

There were some good versions of the extract from Paul de Saint-Victor, but too many were disfigured by "transliterations"—*Misère* is not "misery," but "poverty" (Don César was never miserable); *peuplade* is not "population," but "tribe," in its colloquial signification; *folle* is not "foolish," but "wild"; *clercs* not "clerks," but "theological students" (this being too heavy for a translation, the prize-winner's "clerics" may be accepted). A remarkable number of competitors failed to see the point of *Ce chevalier de joyeuse figure*. Obviously the author is contrasting Don César with another famous gentleman of Spain who is known to the French as *le chevalier de la triste figure*. Some phrases offered real difficulties to those who are not familiar with Victor Hugo's play. *La cape en dents de scie* is taken from Don Salluste's description of "César" in Act I, Scene II; the torn, jagged edges of the garment are likened to a saw, not one of Hugo's happiest comparisons; *le feutre* is depreciatory (*un vieux feutre fané* in the play), "his old tile"; so probably is *la rapière à*

(Continued on page 176.)

SCHOOL TEACHERS AND THE SUPERANNUATION SCHEME.

The discontinuance of direct contribution to the Superannuation Fund means in effect an increase in salary of 4 p.c. per annum.

In the past this deduction was never really missed; why not still employ it by investing in a Special Teacher's Policy with THE STANDARD and thus provide a substantial sum at death or retirement, or a pension for declining years?

THE BOUNTY POLICY is an ideal one for MALE TEACHERS.

For LADY TEACHERS The Standard issues a SPECIAL WOMAN'S POLICY securing a Capital Sum at the end of a fixed number of years with the Guaranteed Option of a liberal pension.

Write to-day for Booklets:—

THE BOUNTY POLICY FOR TEACHERS or LIFE ASSURANCE FOR WOMEN.

They will interest you.

* Replies to these advertisements should be addressed "No. —, c/o Mr. William Rice, 3 Ludgate Broadway, E.C.4." Each must contain sufficient loose stamps to cover postage on to advertiser. Post cards will NOT be sent on.

l'échine, "his rapier hanging down his back," not in its proper place. The last sentence refers to Don César's speech:

"J'ai vu des femmes jaunes, bleues,
Noires, vertes. J'ai vu des lieux du ciel bénis,
Alger, la ville heureuse, et l'aimable Tunis,
Où l'on voit, tant ces Turcs ont des façons accortes,
Force gens empalés accrochés sur les portes."

Paul de Saint-Victor's appreciation is rather florid, and he is as careless in quoting Hugo as Hugo is in quoting history; the description of Goulatromba does not belong to that personage, but to another unnamed friend of César's. The prize-winner's version is spirited, but we see no need for the foreign words, "gitanas," "zingaro," and "alguazils." Are not "gipsy" and "watchman" near enough? "Picaresque," too, is hardly English; we suggest "vagabond." *Chaque mot le campe* is difficult; we must either omit it and translate "Every word and every gesture reveals him . . ." or else render freely "Every word characterizes him."

We classify the 105 versions received as follows:—

Class I.—(a) Bésigue, Pioneer, Noémi, Esse quam videri, PEPINO, Beloved Physician, Wanderer.

(b) Paulus, Emile, Moi, Glenleigh, Menevia, Krypton, Hibernia, Rabbit, Gothicus, Garnet, Fitzalan, Carisbrooke.

Class II.—Erindale, Never say die, Vagabond, Père Jacques, Swastika, J.R., Agricola, Redfern, Bobby, Tank, Celia, A.S.M., Sheang, Printemps, Crystal, Tigris, Jacinthe, Viking, Eléphant marin, Espérance, Mimi, Umbria, Sarnia, Tim, Nailil, On les aura, Chymyny, Chingleput, H.B.S., Trèfle, R.B.J., Forrestier, Pat, Amaryllis, Vanessa, Evo, Ted, Mamble, T.H., Calvus, Gurkha, Cassandra, Ecossais, Wincarnis.

Class III.—J.E.C.G., Zephyr, Chinoise, φιλόλογος, Lynton, Fifi, Ray, Bas-bleu, Teddy, Jocelyn, J.H.K., Nero, Aurelle, Zeno, M.H., Excelsior, Abertawe, Horatius, Sirach, Leander, B.P., Lunette, Llewellyn, Nil sine pulvere, Perky, Aiguisé, Jolande, Auriga, Mascot B., Tyro, P.E.M., M.M.H., Hironde.

Class IV.—Serbia, Mirette, Motte, Anglais, Tuilier, Sandiway, Bizarre, Regulus, Perseverance.

A Prize of Two Guineas is offered for the best translation of the following extract from Anatole France's "Le Mannequin d'Osier":—

Les ormes du Mail revêtaient à peine leurs membres sombres d'une verdure fine comme une poussière et pâle. Mais sur le penchant du coteau, couronné de vieux murs, les arbres fleuris des vergers offraient leur tête ronde et blanche ou leur rose quenouille au jour clair et palpitant, qui riait entre deux bourrasques. Et la rivière au loin, riche des pluies printanières, coulait, blanche et nue, frôlant de ses hanches pleines les lignes des grêles peupliers qui bordaient son lit, voluptueuse, invincible, féconde, éternelle, vraie déesse, comme au temps où les bateliers de la Gaule romaine lui offraient des pièces de cuivre et dressaient en son honneur, devant le temple de Vénus et d'Auguste, une stèle votive où l'on voyait rudement sculptée une barque avec ses avirons. Partout, dans la vallée bien ouverte, la jeunesse timide et charmante de l'année frissonnait sur la terre antique. Et M. Bergeret cheminait seul, d'un pas inégal et lent, sous les ormes du Mail. Il allait, l'âme vague, diverse, éparse, vieille comme la terre, jeune comme les fleurs des pommiers, vide de pensée et pleine d'images confuses, désolée et désirante, douce, innocente, lascive, triste, traînant sa fatigue et poursuivant des illusions et des Espérances, dont il ignorait le nom, la forme, le visage.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than once during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on March 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

Trinity College of Music.

(Instituted 1872.)

President—THE RT. HON. THE EARL OF SHAFTESBURY, K.P., K.C.V.O.

Posts Vacant—continued.**CITY OF BIRMINGHAM EDUCATION COMMITTEE.****BOURNVILLE GIRLS' DAY CONTINUATION SCHOOL.**

(1) Wanted, after Easter, an ASSISTANT MISTRESS able to develop an appreciation of English and, if possible, of Music (taking Class Singing), using modern methods suited to girls 16 to 18 years of age.

(2) Wanted immediately, an ASSISTANT MISTRESS for English and Nature Study. Gardening an additional qualification.

A degree (or equivalent) and secondary school experience desirable. Salary in accordance with the Committee's Scale for Teachers in Secondary Schools. Form of application and scale of salaries may be obtained from the undersigned.

P. D. INNES,

Chief Education Officer.

Education Office, Council House, Birmingham.

7th February, 1920.

CITY OF BIRMINGHAM EDUCATION COMMITTEE.**COTTERIDGE BOYS' DAY CONTINUATION SCHOOL.**

Wanted, as soon as possible, an ASSISTANT MASTER for Mathematics and Science. A degree (or equivalent) and secondary school experience desirable. To teach boys from 14 to 18 years of age. Salary in accordance with the Committee's Scale for Teachers in Secondary Schools. Form of application and scale of salaries may be obtained from the undersigned.

P. D. INNES,

Chief Education Officer.

Education Office, Council House, Birmingham.

6th February, 1920.

RUSSELL HILL SCHOOLS,

PURLEY, SURREY.—Wanted after Easter, an experienced resident FIRST ASSISTANT MISTRESS, Graduate (preferably in Honours, with a Diploma in Education). Subjects—English, History, and Latin. Boarding School experience desirable. Salary and emoluments based on the County Scale. An application form, to be sent ultimately to the Head Mistress, will be sent on receipt of a stamped addressed envelope by the SECRETARY, Warehousemen, Clerks' and Drapers' Schools, Wakefield House, 32 Cheapside, London, E.C.2.

TYPEWRITING. — Testimonials,

1s. per dozen; MSS., 1s. 3d. per 1,000 words; Examination Papers. Miss ASTILL, 157 Victoria Road, Alexandra Park, London, N.22.

SKINNERS' COMPANY'S

SCHOOL FOR GIRLS, STAMFORD HILL, LONDON, N.16.—Wanted, in September: (1) SECOND SCIENCE MISTRESS, chief subject—Botany; (2) ASSISTANT MISTRESS, to teach French, subsidiary subject—Scripture, if possible. Apply to the HEAD MISTRESS.

INTERMEDIATE SCHOOL FOR

GIRLS, HENGORD, via CARDIFF.—Wanted, end of April, GYMNASTICS AND GAMES MISTRESS. Pianoforte a recommendation. Salary according to qualifications and experience (£190-£15-£320). Apply—HEAD MISTRESS.

TESTIMONIALS TYPEWRITTEN FREE.

Ten copies of any one testimonial (not exceeding 200 words) typewritten free of charge for any new client on receipt of 6d. to cover cost of paper and postage. Size: 4to or fcap. Orders executed by return of post. Full price-list, with specimens of typewriting and printing, sent on application.

KING, 45 Bedford Row, London W.C.1.

HULL HIGH SCHOOL FOR

GIRLS.—Required, for April next, two ASSISTANT MISTRESSES. (1) Mistress to teach English throughout the School. Honours Degree or equivalent. (2) Mistress to teach Class Singing and Pianoforte. Apply—The HEAD MISTRESS.

WANTED, for Summer Term only,

Old Public School Boy, good at CRICKET, to take charge of Games and help in Cricket Coaching. Some help with duty: no teaching. Address—No. 10,984.*

RESIDENT Experienced SENIOR

MISTRESS required, with degree, for Mathematics in Girls' Boarding School. Science an auxiliary, not essential. Position of trust.—Address—No. 10,987.*

Posts Vacant—continued.**COUNTY HIGH SCHOOL, ILFORD.**

Applications are invited for the following appointments:

(1) MASTER to teach Economics (Advanced Course) and History (Boys' School). Commencing salary £200 to £275 per annum, according to qualifications and experience. Increments and maximum according to County Council Scale.

(2) SPANISH MASTER for 3 days per week—Monday, Wednesday, and Friday. Salary £180 per annum.

(3) MASTER OR MISTRESS to teach Book-keeping and Business Methods for two sessions per week. Applicants are asked to state salary required.

Applications to be made on forms to be obtained by sending stamped addressed foolscap envelope to the CLERK TO THE GOVERNORS.

LICHFIELD AND SOUTHWELL DIOCESAN TRAINING COLLEGE, DERBY.

Wanted, at an early date, Resident LECTURER IN HISTORY. A Degree in History is necessary, and, in addition, some good subsidiary subject. An Education Diploma, or willingness to prepare for such, will be a recommendation. Salary, to begin, will depend upon qualifications and experience. Candidates, who should be Churchwomen, and not over 30 years of age, should send for application forms to Canon BATER, Training College, Derby.

CENTRAL FOUNDATION

GIRLS' SCHOOL, SPITAL SQUARE, LONDON, E.1.—Wanted, in September: (1) ASSISTANT FRENCH MISTRESS. Residence abroad essential; degree or equivalent. Salary, L.C.C. Scale, £180 to £240 initial, according to experience. (2) PHYSICAL MISTRESS. Secondary school experience essential. Salary, L.C.C. special scale, £180 to £228, initial, according to experience. Write to HEAD MISTRESS for application form, enclosing stamped addressed envelope.

CARLISLE AND COUNTY HIGH

SCHOOL FOR GIRLS.—Required, for Summer Term: (1) GYMNASTIC MISTRESS for Swedish Gymnastics, Dancing, and Games (Bedford or Dartford Training preferred); (2) SECRETARY, able to offer at least one school subject, preferably Drawing. Apply to the HEAD MISTRESS.

THE KING'S HIGH SCHOOL

FOR GIRLS, WARWICK.—Wanted, at the beginning of May, a Resident MUSIC MISTRESS, to spend part of her time in giving Music Lessons and part in the supervision of boarders. Two or three years' experience in a boarding school essential, and L.R.A.M. or A.R.C.M. Diploma. Salary £100 to £120 resident. Apply—HEAD MISTRESS.

HEAD required in the Autumn

Term for the King Alfred Co-educational Day School, Hampstead, conducted on progressive and experimental lines. Present numbers, 100; ages from 8 to 18. Good opportunity for an educational enthusiast with experience and ability. For further particulars, address SECRETARY, 24 Ellerdale Road, Hampstead, N.W.3.

WOLVERHAMPTON HIGH

SCHOOL.—Two SENIOR FRENCH MISTRESSES, September. One French native, other graduate with residence abroad. Salary by scale, £200 to £300, initial, for good experience and qualifications. Advanced course. Apply—HEAD MISTRESS.

FIRST ASSISTANT MISTRESS

required in May for new Junior School: 55 girls, ages 9 to 14, all boarders. Degree and experience essential. Salary from £110 resident, according to qualifications. Salary scale and pension scheme. Wesleyan preferred. Apply PRINCIPAL, Penthos College, Colwyn Bay.

Also SCIENCE MISTRESS (one of two) at the College. Good salary. Subjects in both cases to be arranged.

ENGLISH MISTRESS wanted,

May, for small finishing School, country, near London. Latin, English. £130, resident. Address—No. 10,990.*

MISTRESS for Mathematics, resi-

dent or visiting, for Matriculation class. Address—No. 10,991.*

GAMES MISTRESS, with some

English subjects. Near London. £130 resident. Address—No. 10,992.*

* Replies to these advertisements should be addressed "No. —, c/o Mr. William Rice, 3 Ludgate Broadway, E.C.4." Each must contain sufficient loose stamps to cover postage on to advertiser. Post cards will NOT be sent on.

To ASSISTANT MASTERS ASSISTANT MISTRESSES LADY MATRONS

¶ Candidates seeking appointments in Public or Private Secondary or Preparatory Schools at home or abroad should apply to

Truman & Knightley —SCHOLASTIC AGENTS—LTD—

- who have a large number of EASTER vacancies on their books, and who are already receiving instructions respecting vacancies for SEPTEMBER.

¶ There is a great demand for both Assistant Masters and Assistant Mistresses, and serious efforts are being made to render the prospects in the teaching profession more attractive and equal to those in other professions.

¶ In addition to the large number of appointments open to University men and women in Public Schools where the remuneration is being fixed on improved scales, there are many vacancies in Preparatory Schools where young University men without previous experience can command commencing salaries ranging from £120 to £200 a year or more, according to their degrees, in addition to board and residence in term time.

¶ There are many openings for University women, and also for those with Higher Local or other good certificates interested in children and in teaching, in high class private schools for girls, where the conditions are pleasant, the hours not excessive, and salaries range from £80 to £200 or more, with board and residence, according to age, qualifications, and experience.

¶ There are also vacancies for House Mistresses, Lady Housekeepers, and Matrons in schools at salaries ranging from £60 to £100 or more per annum, with board and residence.

¶ THERE IS NO CHARGE FOR REGISTRATION. The requirements of each applicant receive careful consideration and attention, and the rate of commission charged to those for whom an appointment is secured has recently been reduced.

Offices: 158-162 OXFORD STREET, LONDON, W.1.

BLACKIE & SON'S NEW LIST

The most successful French Course of recent years.

A JUNIOR FRENCH COURSE.

FIRST AND SECOND YEARS.

PUBLISHED IN TWO VOLUMES.

By **E. J. A. GROVES,**

Lic. ès L., Senior French Master, Bradford Grammar School.

First Year, **2s. 6d. net.**

Second Year, **4s. net. Now ready.**

The need of a practical French Course combining the essentials of the "Direct Method" with sound grammatical teaching has long been felt, and has been lately emphasized by the Reports on the *Teaching of French* issued by the Board of Education and the London County Council respectively. The "Direct Method" alone has been found to leave the pupils ill prepared for precise expression or exact renderings in translation, and generally wanting in an exact knowledge of French. Mr. Groves's *Junior French Course*, now issued, undoubtedly demands the consideration of all Modern Language Teachers, for it will be found to combine all that is useful of the "Direct Method" with systematized grammatical instruction, largely by process of induction.

BLACKIE'S FRENCH PLAIN TEXTS.

Price **4d.** each.

The texts in this series are issued without either Notes or Vocabulary, to meet the views of those teachers who prefer to dispense with such aids; and also to allow of their being used for the various purposes for which nothing but a plain text is suitable. Brief introductions are provided.

The most recent and complete book on Citizenship.

THE BRITISH CITIZEN.

By **J. R. PEDDIE, M.B.E., M.A.**

With Coloured and Black and White Illustrations.

Crown 8vo, cloth, price **2s. 6d.**

THE GROUNDWORK OF BRITISH HISTORY.

By **GEORGE TOWNSEND WARNER, M.A.,**

Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School;
Author of "A Brief Survey of British History," &c., and

C. H. K. MARTEN, M.A.,

Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and Full Index. 764 pp., super-crown 8vo, 8s. net. Complete in One Volume.

In Two Parts, **4s. 6d.** each net. Part I, B.C. 55-1603; Part II, 1603-1911.

For the convenience of those requiring the book for certain examinations it is also issued—

In Three Sections, **3s. 6d.** each net: Section I, 55 B.C.-1485 A.D.; Section II, 1485-1714; Section III, 1714-1911.

THE WARWICK SHAKESPEARE.

General Editor—**Prof. C. H. HERFORD, Litt.D.,**

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and æsthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

The WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. **2s.** net each.

A SURVEY OF MODERN HISTORY.

By **H. W. HODGES, M.A., F.R.Hist.S.,**

Late Exhibitioner of Lincoln College, Oxford; Head of History and English Department, Royal Naval College, Dartmouth.

This textbook of the history of the nineteenth century is intended for use in preparation. It provides the student with such a material background as should enable him to understand the history teacher's lectures on the subject, and estimate rightly the relative importance of the various happenings.

Prospectus post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C.4.

AND AT GLASGOW AND BOMBAY.

Supplement to THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

MATHEMATICS.

The Carson-Smith Mathematical Series.

By G. ST. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool, formerly Head Mathematics Master in Tonbridge School; and DAVID EUGENE SMITH, Ph.D., Professor of Mathematics in Teachers College, Columbia University.

The Carson-Smith Mathematical Series provides a course in Algebra and Geometry which is admirably adapted to the requirements of modern mathematical education. While retaining those features which, in the past, conduced to success in mathematics teaching, they incorporate those modern methods which not only vitalize the subject of mathematics for the pupil, but lead him to a thorough understanding and appreciation of mathematical principles and of their applicability to many activities of everyday life.

ELEMENTS OF ALGEBRA.

Part I.—340 pages. Illustrated. **3s. 6d. net.**

Part II.—214 pages. Illustrated. **3s. net.**

Parts I and II.—538 pages. Illustrated. **5s. 6d. net.**

PLANE GEOMETRY.

Part I.—266 pages. Illustrated. **3s. net.**

Part II.—216 pages. Illustrated. **3s. net.**

Complete.—482 pages. Illustrated. **5s. 6d. net.**

Answers can be obtained either bound in with the books or in separate pamphlets as required.

(A detailed prospectus of both books will be sent post free on application to the publishers)

ADVANCED ALGEBRA. By H. E. HAWKES. 8vo, cloth, 285 pages. **7s. 6d. net.**

Beginning with quadratic equations, the work includes a thorough treatment of the usual subjects of examinations in algebra. Topics that require a knowledge of the calculus for their complete comprehension (such as multiple roots and Sturm's theorem), or are more closely related to other portions of mathematics (as theory of numbers, and series), have been omitted.

ELEMENTS OF THE DIFFERENTIAL AND INTEGRAL CALCULUS. By W. A. GRANVILLE and P. F. SMITH. 463 pages. **12s. 6d. net.**

This book is suitable for the student who has completed an introductory course, but is not yet capable of working with advantage from larger advanced treatises on the calculus. It includes a large number of examples without answers, miscellaneous examples, and much practical problem material based on knowledge that all students of the calculus should have at their command.

THEORETICAL MECHANICS. By J. H. JEANS. 364 pages. **15s. net.**

A suitable text for students beginning the study of theoretical mechanics. The subjects dealt with are the general principles of dynamics, the laws of motion, statics and dynamics of a particle and of rigid bodies. Care has been taken to illustrate all principles and results by a series of practical examples and applications. The amount of mathematics in the text has been reduced to a minimum.

A COURSE IN MATHEMATICS. By F. S. WOODS and F. H. BAILEY.

Volume I.—Algebraic Equations, Functions of One Variable, Analytic Geometry, Differential Calculus. 385 pages. With Diagrams. **12s. 6d. net.**

Volume II.—Integral Calculus, Functions of Several Variables, Space Geometry, Differential Equations. 410 pages. With Diagrams. **12s. 6d. net.**

HIGHER ALGEBRA. By H. E. HAWKES. 8vo, cloth, 222 pages. **7s. 6d. net.**

Prepared for the student who will continue mathematics as far as the calculus, this book is written in the spirit of applied mathematics, and is especially adapted for use in technical schools. A concise review of the more important features of elementary algebra is followed by a detailed discussion of the quadratic equation and the more advanced topics, including series.

ADVANCED CALCULUS. By E. B. WILSON. 566 pages. **22s. 6d. net.**

Advanced differential calculus is here represented by work on Taylor's formula, with special reference to approximate analysis, partial differentiation of explicit and of implicit functions, complex numbers, and vectors. As an extension of previous formal work in integration, four chapters are given to the integration of differential equations. Under integral calculus, line integrals, multiple integrals, infinite integrals, special functions defined by integrals, and the calculus of variations are treated. Then follow chapters on series, special developments, functions of a complex variable, elliptic functions, and functions of real variables. Throughout the book especial attention has been paid to the needs of students of applied mathematics and mathematical physics. Many exercises have been provided, and the volume furnishes a thoroughly practical textbook and laboratory manual of higher calculus.

A COURSE IN MATHEMATICAL ANALYSIS. By E. GOURSAT. Translated by E. R. HEDRICK and O. DUNKEL.

Volume I.—Derivatives and Differentials, Definite Integrals, Expansion in Series, and Applications to Geometry. 548 pages. With Diagrams. **22s. 6d. net.**

Volume II.—Part I. Functions of a Complex Variable. 259 pages. **15s. net.**

Part II. Differential Equations. 300 pages. **15s. net.**

Number Stories of Long Ago.

By DAVID EUGENE SMITH, Professor of Mathematics in Teachers' College, Columbia University. 142 pages. Illustrated. **2s. 3d. net.**

An interesting account of the development of number written in the form of stories told to children. Among other things the book tells of man's attempt to count, of the various concrete devices adopted by mankind in the different ages for adding numbers, and of the manner in which the people of long ago multiplied, divided, and wrote fractions. The last two chapters contain some of the oldest number puzzles, which can also be obtained, together with their solutions, in a separate pamphlet entitled "NUMBER PUZZLES BEFORE THE LOG FIRE" (price 6d. net).

A complete catalogue of mathematical publications will be sent post free on application.

GINN & CO., 9, St. Martin's Street, Leicester Square, London, W.C.2.

G. BELL AND SONS, Ltd.

NEW MATHEMATICAL PUBLICATIONS.

ELEMENTARY ALGEBRA, Part 1.

By C. V. DURELL, M.A., Senior Mathematics Master, Winchester College; and G. W. PALMER, M.A., late Master of the Royal Mathematical School, Christ's Hospital.

With Introduction and Full Answers, 4s. 6d. Without Introduction and with Answers only where intermediate work is required. 3s. 6d. Answers separately. 1s.

In designing this book the authors have assumed that discussions in the text are rarely of value to the ordinary boy, and cannot replace oral instructions. In the text will therefore be found only a few simplifications, some definite rules, and a number of illustrative examples. The first part covers the usual course up to and including quadratic equations. It is provided with a large number of miscellaneous examples in which every endeavour has been made to introduce practical questions and make Algebra a living subject. The book has been revised by a teacher who has had wide experience of the needs of students at Technical Colleges and Evening Schools.

BUSINESS ARITHMETIC.

By C. PENDLEBURY, M.A., F.R.A.S., and W. S. BEARD. Crown 8vo. 3s. 6d.

This book is based on a scheme suggested by the Board of Education for the co-ordination of the teaching of Arithmetic with the teaching of the principles of the keeping of accounts. It contains all that is necessary for a first year's course for students in Day Continuation Schools, and also for pupils in Secondary Schools who may be preparing for a business career.

ARITHMETIC, Part II.

By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. 3s. 6d.

This book covers the ground required for the new combined syllabus of the School Certificate and Army Examinations, and deals in some detail with Mensuration. Logarithms are fully treated, and there is a large selection of Revision Papers, dealing with the various subjects in turn.

Bell's Mathematical Series.

FOR SCHOOLS AND COLLEGES.

General Editor: W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University.

Recent Volumes.

ARITHMETIC FOR PREPARATORY SCHOOLS.

By TREVOR DENNIS, M.A., Head Master of Lady Manners' School, Bakewell. Crown 8vo. 4s. Or with Answers, 4s. 6d. Also issued in two parts, bound in limp cloth—Part I, 2s. 6d. Part II, 2s.

This text-book follows the lines of the syllabus issued by the Curriculum Committee of the Head Masters' Conference. The types used conform to the standard laid down by the British Association Committee.

ANALYTICAL GEOMETRY OF THE STRAIGHT LINE AND CIRCLE.

By JOHN MILNE, M.A., Senior Mathematics Master of the Mackie Academy, Stonehaven. Crown 8vo. 5s.

A FIRST COURSE IN THE CALCULUS.

By W. P. MILNE, M.A., D.Sc., and G. J. B. WESTCOTT, M.A., Head Mathematics Master, Bristol Grammar School. Crown 8vo. Second Edition With Answers, 8s. 6d.

STATICS AND DYNAMICS FIRST PARTS.

By R. C. FAWCETT, M.A., B.Sc., Head of the Military and Engineering Side, Clifton College. Crown 8vo. In one volume, 5s. Also Statics, complete, 5s. Or in two parts, 3s., 2s. 6d. Dynamics, complete, 5s. Or in two parts, 3s., 2s. 6d.

Full particulars of this series and of the well-known text-books of **Arithmetic, Algebra, Geometry, and Trigonometry** by Messrs. Pendlebury, Baker and Bourne, Borchardt and Perrott, &c., will gladly be sent on application.

SCIENCE

New book by Prof. Smith.

INTERMEDIATE CHEMISTRY.

By ALEXANDER SMITH, B.Sc., Ph.D., F.R.S.E., Professor of Chemistry and Head of the Dept., Columbia University. About 8s. 6d. net. [In the Press.]

This new text-book of Chemistry is longer than the Elementary volume, and shorter than the General Chemistry. It includes a brief outline of Agricultural Chemistry, and also contains a discussion of Foods and their heating values, an explanation of the methods for softening water, and other practical applications of chemistry.

Other Volumes by the same Author.

FROM
Mr. HERBERT RUSSELL'S
LIST.

A Scientific Geography. Book I. The World (Broadly Treated). By ELLIS W. HEATON, B.Sc., F.G.S. Crown 8vo, cloth. Price 3s. 6d. net.

This volume deals with the "Principles of Geography" (Oxford Locals), and contains all the "Physical Geography" required for the Cambridge Local Examination.

Environment: A Natural Geography.

By G. R. SWAIN, F.R.Met.S., Geography Master at the Manchester Warehousemen and Clerks' Schools. Crown 8vo, cloth 224 pp. Price 3s. 6d. net.

The World in Natural Regions treated under the following Sections:—

I. The Polar Regions. II. The Cool Temperate Regions. III. The Warm Temperate Regions. IV. The Hot Lands.

The primary aim is to show the intimate connexion between man and his geographical environment, and special attention is paid to the climatology, structure, and general physical condition of each region. The origin and development of towns are fully dealt with, and the influence of environment on plant and animal life is made a special feature.

Book Ways: A Readable History of English Literature. By EDITH KIMPTON, M.A., A.K.C.

New edition, with a prefatory letter by the late THEODORE WATTS-DUNTON. Crown 8vo, cloth, 296 pp. Price 3s. 6d. net.

"To cover the whole ground denoted by the term 'English Literature' in less than 300 pages is a feat that requires some ability. To do this, and at the same time make the book readable and interesting, requires more. This is what Edith Kimpton accomplishes in 'Book Ways.' Her book is a *multum in parvo*."—*The Scotsman*. "The aim has been to trace a natural sequence and prefer judicious extracts to mere categories of dates and names."—*Pall Mall Gazette*. "A little masterpiece."—THEODORE WATTS-DUNTON.

The Translation of French Unseens.

By EUGENE PERROT, B.ès L., Lecturer in French in the London County Council. Invaluable to Certificate and Matriculation Students. Crown 8vo, cloth, 187 pp. Price 3s. net.

The Essentials of French Grammar.

By ALFRED BARRIBALL, B.A., Vice-Principal of Westminster Training College. Crown 8vo, cloth, 236 pp. Price 3s. 6d. net.

French Composition. By F. GUILLOT, Agrégé de l'Université Licencié ès Lettres, Professeur au Lycée Charlemagne, Paris, H. PROIX, Professeur à l'Ecole Supérieure, and J. B. SAY, Paris, Professeur d'Ecole Normale. Crown 8vo, cloth, 280 pp. Price 2s. 6d. net.

Inorganic Chemistry, both Practical and Theoretical, with Chemical Calculations and Graduated Questions. The best, latest, and cheapest textbook on the subject produced for the requirements of the University Locals. By S. W. BURNELL, LL.B., B.Sc., and A. J. DICKS, B.A., B.Sc. Crown 8vo, cloth, 379 pp. Price 4s. 6d. net.

Elementary Science. By J. H. NANCARROW, late Head Master of Kingston Public School of Science, and Lecturer at the Richmond School of Science. Crown 8vo, cloth, 354 pp. Price 4s. net.

Provides a thorough grounding in the elements of Physics, Mechanics, Heat, Light, Magnetism, Electricity, Chemistry, &c.

Plant Study in School, Field, and Garden. A textbook on Rural Science and Gardening. By J. S. BRIDGES, B.Sc., F.C.S., and A. J. DICKS, B.A., B.Sc., F.L.S., Head Master of Walthamstow County Secondary School. Crown 8vo, cloth, 432 pp. Price 4s. 6d. net.

This Botany textbook is of an experimental nature and free from difficult terms and Latinisms. Practical exercises and a summary appear at the end of each chapter. The book is profusely illustrated with over 600 original drawings.

Concurrent Practical and Theoretical Geometry. By W. J. POTTER, M.A. (Cantab.), Published in Three Parts. Part I, 2s. 3d. net; Part II, 2s. 6d. net; Part III, 3s. net. Detailed Prospectus post free on application.

Answers to the numerical and graphical examples in Parts I to III. Price 1s. net.

A Digest of British History. By S. H. MCGRADY, B.A. With an Introduction by OSCAR BROWNING. Crown 8vo, cloth, 320 pp. Price 3s. 6d. net.

A History note-book on original lines, the great movements, trends, and developments being logically traced, and their influences being clearly shown.

Also published in three parts as under:—

Part I.—B.C. to 1485. Part II.—1485 to 1789. Part III.—1789 to 1912. Price 1s. 4d. net each.

LIST

FRENCH CLASSES.

PROGRESSIVE FRENCH GRAMMAR.

By F. A. HEDGECOCK, M.A. (Officier de l'Instruction publique; Officier d'Académie, and the only English Docteur ès Lettres of the University of Paris). The method is a combination of the direct with the indirect, and, by means of phonetic type, a closely approximate idea of French pronunciation is conveyed.

Send for 16 page section of the book, which will be sent, post free, together with descriptive leaflet.

PART I, 3s. 6d. NET.

COMPLETE, 5s. 6d. NET.

PART II, 2s. 6d. NET.

KEY, 3s. 6d. NET.

ART CLASSES.

DRAWING AND DESIGN.

By SAMUEL CLEGG, with a Foreword by Prof. WILLIAM ROTHENSTEIN.

A school course in composition with the following salient features: 1.—Some of the plates are printed from wood blocks designed and cut by scholars. 2.—Special attention is paid to design in needlework. 3.—Art and craft work are linked together. 4.—The subject of lettering and manuscript writing is treated suggestively as part of the course in Art.

280 pp. Size 10 in. by 7½ in. 18 plates in colour. 148 other illustrations. 10s. 6d. net.

SIMPLE ART APPLIED TO HANDWORK.

By H. A. RANKIN and F. H. BROWN, A.R.C.A. (Lond.). Vol. I contains sections on Brushwork, Designs, Stencilling, and Lettering. Vol. II deals with Wood Shapes, Staining, Inlaying, the Use of Rails, Indented Work, Leather Work, Metal Work, &c. In two Vols., profusely illustrated, each 5s. net.

SIMPLE PICTORIAL ILLUSTRATION.

By F. H. BROWN, A.R.C.A. (Lond.), and H. A. RANKIN. Contains chapters on Sky and Clouds; The Appearance of the Land under Different Aspects; The Representation of Water; The Various Types of Buildings; The Drawing of a Tree, of Animals, &c. With 22 magnificent three-colour plates, and many other illustrations. 5s. net.

THE TEACHING OF COLOUR.

By H. A. RANKIN. Deals in an original way with colour problems, especially in the observational exercises, in as simple a manner as possible. With 55 beautiful plates in colour and black and white. 6s. net.

WOODCARVING DESIGN AND WORKMANSHIP.

By GEORGE JACK. 79 Drawings by the Author, 16 pp. of Collotype Reproductions. Crown 8vo, 320 pp. 7s. 6d. net. Second Edition.

Extract from the *Builders' Journal*.—"Undoubtedly the best guide to Woodcarving extant."

MANUSCRIPT WRITING AND LETTERING.

By AN EDUCATIONAL EXPERT. A Handbook for Schools and Colleges, showing the Historical Development and Practical Application to Modern Handwriting of several Manuscript Styles derived from Ancient Roman Letters. Fully illustrated, together with 8 Collotype Plates of Writing from Manuscripts recommended as Models for Study. Foolscap 4to. 5s. net.

ELEMENTARY EMBROIDERY.

By MARY SYNMONS (Mrs. G. Antrobus). The object of this book is to give sufficient knowledge of Embroidery to enable the student to become an expert from both the artistic and commercial point of view. It is written in such a manner that the teacher using it may have scope for original thought and individuality.

164 pp. with 103 illustrations in Red and Black, Foolscap 4to. 4s. 6d. net.

**THE
NORMAL
CORRESPONDENCE COLLEGE
AT
A.C.P. and L.C.P.
(Results Just Issued.)**

**As usual, pupils of the Normal pass
the A.C.P. and L.C.P. with Honours.
HONOURS.**

*The following are some only of the pupils of the Normal who gained Honours at the recent
A.C.P. and L.C.P. Examinations.*

Roxana, Victoria Road,
Pembroke Dock, South Wales.
January 30th, 1920.
Dear Sir,
I have very much pleasure in informing you that I have passed the L.C.P. Examination in all subjects with Honours in three, viz., Trigonometry, Conics, and Mechanics. I found your notes and model answers of very great assistance. As this is the second time I have been successful under your tuition, I must thank you very much for the help you have given me on both occasions. I shall be pleased to recommend your classes whenever possible.
I remain,
Yours faithfully,

B. J. CHURCH.
(Triple Honour:—Money Prize and Normal Silver Medal awarded—
Full L.C.P. Diploma granted.)

Elder Bank, Gorsey Clough,
Tottington, near Bury.
February 1st, 1920.
Dear Sir,
I am very pleased to inform you that I received my result this morning. Pass, so full Diploma is granted me with Honours in History. I wish to thank you for your tuition, which I found very helpful indeed.
Yours faithfully,

J. A. ASPDEN.
(Honours—Normal Silver Medal awarded—Full A.C.P. Diploma
granted.)

69 Park Street,
Farnworth, Bolton.
February 1st, 1920.
Dear Sir,
I am pleased to say that I have been successful in passing the recent Examination for the A.C.P., and that I obtained Honours in Geography. I must say that I received valuable help from your papers and I have done better than I thought possible after the last few years away from all study. I hope to again join your classes in a few weeks' time.
Yours sincerely,

R. GRIFFITHS.
(Honours—Normal Silver Medal awarded—Full A.C.P. Diploma
granted.)

18 The Avenue,
Consett,
February 2nd, 1920.
Dear Sirs,
I have very much pleasure in telling you that, thanks to your assistance in tuition, I have been granted a pass, with Honours in Arithmetic and Geometry, at the recent A.C.P. Examination. Once more thanking you for your assistance.
I remain,
Yours faithfully,

A. C. BERRYMAN.
(Honours—Normal Silver Medal awarded—Full A.C.P. Diploma
granted.)

Taunton School,
Taunton,
January 31st, 1920.
Dear Mr. Lyddon Roberts,
You will, I am sure, be glad to hear I have received news that I have passed the L.C.P. Examination with Honours in Trigonometry. I must thank you and the Normal Correspondence College for your excellent course papers, for with their help for only about three months I have been able to obtain this result. I also wish to thank you for the kind and considerate way you met all my difficulties. With such a result I shall not fail to recommend your College, and wish it the success it so well deserves.
Yours very sincerely,

F. G. DOWELL.
(Honours—Normal Silver Medal awarded.—Full L.C.P. Diploma
granted.)

101 Repton Road,
Brislington, Bristol.
January 30th, 1920.
Dear Sir,
I am pleased to inform you that at the last L.C.P. Examination I was successful in all the subjects in which I received tuition from you. In Geography I gained Honours, thus giving me a claim to your Silver Medal award. Thanking your College for all the help I received.
I remain,
Yours faithfully,

W. G. H. SYMMONS.
(Honours—Normal Silver Medal awarded.)

9 Park Road,
Dartford, Kent.
February 1st, 1920.
Dear Sirs,
My L.C.P. result came to hand yesterday. You will be pleased to know I have passed in both groups presented, i.e. Education and Mathematics, obtaining Honours in Trigonometry. My thanks are due to you, especially to Mr. Bell (Mathematics Tutor) and Mr. Robinson (Logic) for their efficient coaching.
Yours faithfully,

B. T. ELLIS.

TEACHERS REGISTRATION COUNCIL

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, Feb. 29, 1912.)

THE Teachers Council was formed at the special desire of the teachers of the country. This desire was expressed through the various Associations and Societies of Teachers. It is clearly formulated in the following extracts from the Objects of the National Union of Teachers:—

“To secure the compilation of a comprehensive Register of Teachers.”

“To secure the solidarity and extend the influence of the Teaching Profession.”

The aims thus set forth are sought by teachers of all types. Solidarity can be attained only by the unification of the teaching profession, and of this unification the Official Register of Teachers is the outward symbol. Teachers who are qualified for Registration should therefore become Registered without delay in order to show that they are loyal to the best interests of their calling and prepared to do their share in extending the influence of their profession.

The Teachers Council is a representative body composed entirely of teachers who are chosen by Associations and Societies of Teachers. No fewer than 42 such bodies are represented on the Council, in addition to the Staffs of eleven Universities.

It began the compilation of an Official Register of Teachers early in 1914, and in spite of the grave handicap imposed by the War, the number of applicants for Registration is now

35,000

The Council has been able to bring together the views of teachers of all types, and while not attempting to control the policy of any section or association, it has undoubtedly done much to foster united action and harmony of purpose, and to lay the foundations of a real profession.

The Council desires to make known to all

UNREGISTERED TEACHERS

that

1. The full CONDITIONS OF REGISTRATION will come into force at the beginning of the year 1921. Up to 31st December, 1920, teachers may be admitted to Registration on proof of EXPERIENCE ALONE, under conditions satisfactory to the Council. After that date proof of ATTAINMENTS and PROFESSIONAL TRAINING will be required.
2. The OFFICIAL LIST OF REGISTERED TEACHERS is now being revised. Entries for the Revised List will close on WEDNESDAY, 30th JUNE, 1920.
3. On and after the same date, WEDNESDAY, 30th June next, the uniform fee for Registration will be TWO POUNDS, instead of ONE GUINEA as at present.

Teachers who are not already Registered should complete the form below and post it without delay to the offices of the Council.

To the SECRETARY, TEACHERS REGISTRATION COUNCIL,
47 Bedford Square, LONDON, W.C.1.

The Book for Teachers.

MODERN IDEAS AND METHODS.

By **JOHN EADES**, Head Master of Kirkstall Road School, Leeds; formerly Lecturer in English to Certificate Students at the Leeds Centre. Author of "The 'A.L.' New English Course."

Crown 8vo., xii + 191 pp., bound full cloth, net 2/6 (postage 5d.).

This book is not merely a collection of ingenious "wrinkles," but an attempt to give guidance to teachers and students in method on modern lines, in a way somewhat different from that found in the usual method books. It is theory and practice combined, and is the outcome of many years' teaching experience.

The "A.L." NEW ENGLISH COURSE, Book VII.

By **JOHN EADES**. Paper cover, published, 1/4. Limp cloth 2/-.
Specially suited for Senior Pupils, for Central Schools,
and for the Lower Forms of Secondary Schools.

The "A.L." "COMPACT" RECORD BOOK, No. 125.

For Technical Schools and Institutes, Junior
Technical Schools, Commercial and Continuation
Classes, &c. 1/3 net.

The "A.L." "ACME" RECORD BOOK, No. 126.

HORACE MARSHALL & SON

Outlines of European History, 1789-1914.

By C. L. THOMSON, F.R.Hist.S., and M. B. CURRAN, Assistant Secretary to the Royal Historical Society, and Secretary to the Historical Association.

This history, the work of two teachers of long experience, is adapted for the use of pupils in the upper and middle forms of secondary schools. It treats first of the European wars from 1789-1815, then of the history of the various countries separately from 1815-70, and lastly of the developments which brought about the European War of 1914. Price 6s. net. *Just published.*

ASSOCIATION OF UNIVERSITY WOMEN TEACHERS.—The thirty-sixth annual business meeting of the Association of University Women Teachers was held at Bedford College for Women on January 24. The retiring President, Miss Stephen, Principal of Newnham College, was in the chair. Miss Gray, High Mistress of St. Paul's Girls' School, has accepted the office of president. Miss Stephen called attention to the coincidence of the date of the meeting with the centenary of the birth of Miss A. J. Clough, the first principal of Newnham College and the founder of the Association. At the time of Miss Clough's birth the education of women in England was almost entirely in the hands of private schools and governesses. At Cambridge the only Tripos, even for men, was that of mathematics, and up till 1851 no man could take a Classical Tripos without having previously been placed in the mathematical lists. In the autumn of 1869 Prof. Henry Sidgwick started the idea of organizing lectures for women at Cambridge, but it was not till October 1871 that a house of residence for students was opened with Miss Clough at its head. Miss Stephen traced the progress that had been made since that date, and urged that university women should regard their privi-

leges as a trust to be held for the benefit of others. Sir Arthur Quiller-Couch gave an interesting lecture on "The Burden of Books," reminding his audience how the destruction of the great library at Alexandria in 641 A.D. was said to have furnished the city with a six months' supply of fuel for heating the public baths. He pointed out that culture was not dependent on a multitude of books, but on the complete mastery of a chosen few. (Incidentally he commented on the absurdity of compiling a list of the hundred best books because of the impossibility of comparing such works as "Paradise Lost" and "The Pickwick Papers.") In conclusion, Sir Arthur gave a delineation of the characteristics of a classic, and emphasized the need for studying great masterpieces of literature for their intrinsic merit.

TRADE UNION CONGRESS AND EDUCATION.—A deputation from the Trade Union Congress Parliamentary Committee was received by Mr. Herbert Lewis at the Board of Education on February 5. Two resolutions adopted at the Congress, held at Glasgow in September last, were discussed. The first resolution expressed the apprehension that schools or classes for young persons established in connexion with their places of employment, or in connexion with the trades or industries in which they may be employed, would subordinate the educational interests of such young persons to trade requirements. The second referred to the position of uncertificated teachers, and claimed that they should receive equal representation with certificated teachers on all local or national bodies concerned with teachers: that the same scale of salaries should apply to certificated and uncertificated teachers; and that all future teachers should pass the same examination and enter the profession through the same door. Mr. Herbert Lewis said that the Board had no hesitation in accepting the principle that any control of continuation schools which has the effect of subordinating the educational interests of young persons to trade requirements is bad. Mr. Lewis pointed out that attendance would be only obligatory at schools under the direction and control of the local education authority. As regards the second resolution, Mr. Lewis pointed out that the Board had no power to require local education authorities to admit representatives of particular classes of teachers or other persons to committees established by them. The question whether some alternative "door" from the uncertificated to the certificated grade, other than the acting teachers' examination, might not be opened was, he said, under consideration.

PATON'S LIST of SCHOOLS and TUTORS

23rd ANNUAL EDITION NOW PREPARING.

An Aid to Parents in the Selection of Schools.

**EVERY YEAR THOUSANDS OF PARENTS
CONSULT THIS BOOK.**

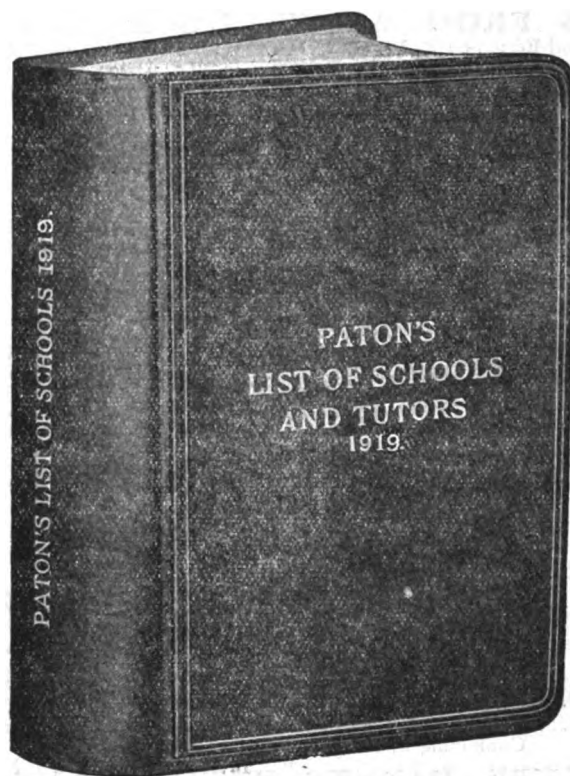

"I am glad to find I have got another pupil this term through the advertisement of the school in your book, so am glad I was persuaded to keep it in."

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"I enclose a request to have my notice renewed. I would not for anything leave it off now."

"When I first came here I spent over £50 in six months advertising in the leading papers—result, **one** boy. Then I came under your Agency—result, a **steady stream** of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

National Library of Ireland, Dublin.—"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term **four** pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

**Specimen Copy and full particulars sent free
of charge to Head Masters and Head Mistresses.**

Recommends Teachers and Lecturers. Teachers,
with University qualifications, requiring posts in
Public or Private Schools, are invited to apply to the
Secretary—Mrs. B. BROUGH. Subscription 5s. per
annum. Tel.: VIC. 2483.

THE COLLEGE OF PRECEPTORS

Incorporated by Royal Charter

BLOOMSBURY SQUARE, LONDON, W.C.1

The Summer Examination of Teachers for
the Diplomas of A.C.P. and L.C.P. will be
resumed on the 3rd of August, 1920. The
Examination will be held at Birmingham,
Bristol, Cardiff, Dublin, Leeds, Liverpool,
London, Manchester, and Newcastle-on-Tyne.
The Regulations may be obtained from the
Secretary.

Examinations for those who desire to
satisfy the preliminary requirements of the
Law Society, the General Medical Council,
the Conjoint Board of the Royal Colleges of
Physicians and Surgeons, the Pharmaceutical
Society, and other bodies, are held four
times a year, viz., in March, June, Sep-
tember, and December, in London and at
provincial Centres in England, Wales, and
Scotland. The Regulations may be ob-
tained from the Secretary.

Caps, Ties, Badges, &c., at
wholesale prices.

Original ideas for School
Prospectuses.

**EDUCATIONAL BUREAU,
1 and 2 Sicilian House,
W.C.1.**

Phone: Museum 6294.

JOINT SCHOLASTIC AGENCY, LTD.

The object of this Agency is to render assistance at
a minimum cost to Masters seeking appointments.
*There is no Registration Fee, and the lowest
possible charges are made for Commission,
which are still further reduced by large dis-
counts—see Rules VII and VIII of Prospectus,*
which will be sent on application.

This Agency is under the direction of a Committee
representing the following leading Educational
Associations:—

**Head Masters' Conference; Incorporated
Association of Head Masters; College of
Preceptors; Teachers' Guild; Incorporated
Association of Assistant Masters.**

Registrar: Mr. E. A. VIRGO.

9 Brunswick Square, London, W.C.1 (near Russell
Square Tube Station and the Foundling Hospital).

Office Hours: 9.30 a.m. to 5 p.m.

Saturdays, 9.30 a.m. to 1 p.m.

The most convenient hours for interviews are from
11.30 a.m. to 1.30 p.m., and from 3.30 p.m. to 4.30 p.m.
Appointments should be made when possible.

**Telephone: Museum 3217. Telegrams: "Edu-
catorio Grenville London."**

Scholarships, &c.

Examination will be held in May. The Scholarships
will be of the value of £60 each per annum. Can-
didates must be under 14 years of age on April 1st, 1920.
Entries cannot be received after April 8th. For
particulars apply to the HEAD MISTRESS.

THE SCHOLASTIC, CLERICAL & MEDICAL ASSOCIATION, LIMITED.

**22 CRAVEN STREET,
TRAFALGAR SQUARE,
LONDON, W.C.2.**

Telegraphic Address: "TRIFORM, WESTRAND, LONDON." Telephone No.:
Gerrard 1854.

Advice as to Choice of Schools.

A Register of Schools, Private Tutors, &c., is kept
at the Offices of the Association, and Parents or
Guardians may obtain, without charge, information
and advice as to Schools for Boys or Girls (in all
parts); Tutors for University, Civil Service, Legal,
Medical, Naval or Military Examinations, and as to
Educational Establishments of every kind. Pros-
pectuses of Schools, &c., can in most instances be
sent to applicants by return of post.

Appointments.

Principals requiring the services of qualified As-
sistant Masters or Governesses can, on supplying an
outline of their requirements, obtain a list of those
Candidates on the books of the Association likely to
prove suitable.

Assistant Masters or Governesses requiring ap-
pointments are invited to make application to the
General Manager of the Association. No preliminary
fees are charged.

Transfers and Partnerships.

The Association undertakes the negotiation of
School Transfers or Partnerships. Terms and par-
ticulars on application. All communications on this
subject are treated as strictly confidential.

A prospectus, giving the names of the
Directors of the Association, sent on
application to the General Manager:—
Mr. A. V. STOREY,

22 Craven Street, Trafalgar Square, W.C.2.

OF EURHYTHMICS, LTD., 23 Store St., W.C.1.

Telegrams: Eurhythm, Westcent, London.

Telephone: Museum 2294 (10-1; 3-5).

Truman & Knightley

SCHOLASTIC AGENTS LTD

SCHOOL TRANSFER DEPARTMENT.

Ladies and gentlemen seeking partnerships in or to take over schools of their own should communicate personally with **Mr. TRUMAN**, who has had a large experience in the conduct of negotiations connected with the transfer of schools, and who is in a position to offer expert advice and assistance to purchasers, to whom no charge is made. He regards an efficient private school as a sound and remunerative investment at the present time.

Messrs. TRUMAN & KNIGHTLEY beg to call attention to the following openings in **Girls' Schools** which they have been called upon to negotiate:—

HOME COUNTIES.—First-class Day and Boarding School for Girls in a residential suburb of London: 19 boarders paying 90 to 105 guineas per annum, and 60 day pupils paying from 9 to 18 guineas per annum, exclusive of extras; gross receipts over £3,000, net profit about £1,000. Goodwill £1,500, furniture at valuation; part of the purchase money could be paid off by instalments. Very attractive premises and grounds at moderate rental.—T 2,871.

EAST COAST.—Day and Boarding School for Girls, containing 25 boarders paying from 54 to 60 guineas per annum, 50 day pupils paying from 9 to 15 guineas per annum, exclusive of extras; fees could easily be raised. Gross receipts about £2,000, net profit between £600 and £800. Urgent need for a school of this kind in the town. As soon as accommodation is available, the school could be considerably increased. Goodwill £1,000, furniture at valuation.—T 2,987.

EAST COAST.—Day and Boarding School for Girls, containing over 160 day pupils paying from 9 to 18 guineas per annum, and 13 boarders paying from 60 to 69 guineas per annum, exclusive of extras; gross receipts about £4,000, net profit £700. Goodwill £1,500, furniture £1,000.—T 3,100.

N.W. COAST.—Flourishing old-established, high-class Boarding and Day School for Girls: 47 boarders paying from 75 guineas per annum, in addition to extras, and 34 day pupils and day boarders. Excellent premises and grounds. Gross receipts nearly £5,000 per annum, net profit over £1,000 a year. Goodwill £2,000, furniture at valuation; part of the purchase money could be paid off by instalments.—T 2,241.

KENT.—Training College for Children's Nurses: 20 resident students paying £64 per annum for a nine months' course; the children pay £9. 10s. a quarter, or £6. 10s. a month. Gross receipts about £2,800, which produces a good profit. A quarter's fees accepted for goodwill; furniture could be paid for by instalments at a fair valuation.—T 2,687.

SURREY.—Finishing School, with Domestic Science Department: 42 boarders paying from 105 to 120 guineas per annum, exclusive of extras; net profit about £1,500. £4,000 required for goodwill, furniture, and equipment, three-quarters of which could be paid off by instalments.—T 3,104.

SOUTH COAST.—Flourishing Boarding School for girls, containing between 70 and 80 boarders at fees of from 78 to 84 guineas per annum, exclusive of extras; gross receipts nearly £10,000, net profit over £3,500. Goodwill, furniture, and equipment £8,000, half of which could be paid off by instalments. There is a lady on the staff who might be willing to join a purchaser in partnership.—T 3,127.

SCOTLAND.—Old-established Day School for girls; average gross income £3,200, net income £1,050; excellent premises. £4,000 required for premises, goodwill, furniture, &c., half of which could be paid off by instalments.—T 3099.

LANCASHIRE.—Private High School for girls with Kindergarten and Preparatory Class for boys, containing about 93 day pupils, producing nearly £1,000 a year. £300 asked for goodwill and school furniture, or offer.—T 2,968.

SURREY.—Principal moving away with her boarders wishes to dispose of her connexion of 30 to 40 day girls paying 18 to 36 guineas per annum. Gross receipts from day pupils between £1,200 and £1,500. Rent of premises, with accommodation for about 30 boarders, £300. One term's fees accepted for goodwill.—T 3,086.

WEST OF ENGLAND.—High-class Boarding and Day School containing 15 boarders paying fees from 80 to 90 guineas per annum, and 47 day pupils paying from 12 to 30 guineas per annum; gross receipts about £3,000 a year. Goodwill £950; furniture could either be taken at valuation, or would be let with the house at £180 per annum.—T 2,502.

YORKSHIRE.—High-class Boarding and Day School containing over 100 boarders at fees from £60 to £72 per annum, and 20 day pupils paying 15 to 18 guineas per annum; gross receipts over £9,000. Would make suitable arrangements with a capable lady qualified to run a large Boarding School and able to pay down from £1,500 to £2,000.—T 3,063.

NEAR LONDON.—Partner, or Senior Mistress with a view to partnership, required in high-class Boarding and Day School for girls, containing 31 boarders paying from 90 to 99 guineas per annum, and 65 day pupils paying 12 to 21 guineas per annum. Gross receipts about £6,000, net profit about £1,200. Applicants should be University women, or, if not, capable of taking entire charge of the domestic side of the school.—T 3,066.

IRELAND.—High-class School for daughters of professional men; 36 boarders paying fees from £50 to £90 per annum, 60 day pupils paying from £6 to £30 per annum; gross receipts £3,600, net profit nearly £1,000 a year. Reasonable terms made with suitable successor, who must be an Evangelical Churchwoman. Part of purchase money could be paid off by instalments.—T 2,538.

WEST OF ENGLAND.—Well established Boarding and Day School containing 17 boarders paying from 60 to 75 guineas per annum, and 33 day pupils paying from 12 to 21 guineas per annum, who are all girls of a good class. Gross receipts nearly £2,000 a year, net profit between £300 and £400 a year. Goodwill £700, furniture at valuation.—T 3,084.

LONDON.—Day School of the highest class containing 80 to 100 pupils; gross receipts over £3,000, net profit over £1,000 per annum. Goodwill £2,000, furniture at valuation. A partner would be received with a view to succession, and part of the purchase money could be paid off by instalments.—T 3,072.

BUCKS.—High-class Boarding School on Chiltern Hills containing 32 boarders paying £115 to £120 per annum exclusive of extras; gross receipts over £3,000, net profit between £600 and £700. Magnificent freehold premises in grounds of six acres. Price of freehold £10,000, a large amount of which could remain on mortgage. Satisfactory terms could no doubt be arranged with a suitable lady who is able to put down from £3,000 to £4,000.—T 3,106.

LONDON.—Good-class Day School with Kindergarten and House of Residence for students; 96 day pupils paying from 9 to 18 guineas per annum, exclusive of extras, and 14 students paying from 60 to 90 guineas per annum for board and residence; gross receipts over £3,000, net profit over £900. Entire goodwill £1,200, furniture at valuation. Principal willing to negotiate with suitable lady or ladies able to pay down from £500 to £1,000.—T 3,111.

IRELAND.—Assistant required to Principal of Gymnastic Institute in one of the largest cities in Ireland. A salary of £100 per annum with board and residence and bonus offered in the first instance to a lady who could succeed the Principal in a year or two's time, paying for goodwill, gymnasium and fittings, £650. Excellent opening for a well trained Gymnastics Mistress.—T 3,114.

LONDON.—Lady required to open a boarding house in connexion with a Public Day School in good residential suburb of London. About 25 boarders available, paying from 60 to 66 guineas per annum. Applicants should be able to furnish a large house for this number of Boarders.—T 3,112.

Messrs. TRUMAN & KNIGHTLEY have also a limited number of openings for investment in Boys' Schools.

All communications and inquiries are treated in the strictest confidence.

University Tutorial Press.

SELECTED :: EDUCATIONAL :: BOOKS.

Botany and Nature Study.

The Senior Botany. By FRANCIS CAVERS, D.Sc. *Second Edition.* 5s. 6d.

A school course of Botany in which great stress is laid on outdoor and indoor observation and experiment.

Junior Botany. By FRANCIS CAVERS, D.Sc. 3s. 6d.

Suitable for use in Junior forms: encourages observation and experiment on living plants, and the study of adaptation to environment.

Textbook of Botany. By J. M. LOWSON, M.A., B.Sc., F.L.S. *Fifth Edition, Revised and Enlarged.* 8s. 6d.

The standard is that usually required for University Intermediate Examinations. The chief aims are simplicity and clearness of statement as regards both facts and principles.

A First Course in Plant and Animal Biology. By W. S. FURNEUX. 2s. 9d.

The object of this book is to provide young beginners with a course of Nature Study closely in touch with scientific methods.

Life Histories of Common Plants. By FRANCIS CAVERS, D.Sc. 4s.

The greater portion of the work is devoted to detailed instructions for the study, by observation and experiment, of typical plants.

Practical Botany. By FRANCIS CAVERS, D.Sc. *Second Edition.* 5s. 6d.

In addition to the ordinary practical work this book also contains experiments on the Physiology of Plants and their response to external stimuli, and on the Chemistry of Plant Substances.

School Gardening, with a Guide to Horticulture. By ALBERT HOSKING, Lecturer in Horticulture and Chief Supervisor of School Gardens, West of Scotland Agricultural College. With numerous illustrations and plans. 3s. 6d.

This book affords teachers sound guidance in the correct methods of teaching this subject and of organizing the classes.

Languages and History.

Junior English Grammar with Parsing and Analysis. By A. M. WALMSLEY, M.A. *Second Edition, Revised.* 2s.

Based mainly on inductive methods. The recommendations of the Joint Committee on Grammatical Terminology have been completely adopted throughout.

The Matriculation English Course. By W. H. LOW, M.A., and JOHN BRIGGS, M.A. *Third Edition.* 4s. 6d.

A graduated course in English grammar, composition, and précis-writing.

An Anthology of English Verse. For use in Schools and Colleges. With an Introduction and a Glossary. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. *Second Edition.* 3s. 6d.

A selection of the best in all branches of English poetry, except the dramatic, from Wyatt to Swinburne.

The Tutorial History of English Literature. By A. J. WYATT, M.A. *Third Edition, continued to the present time.* 3s. 6d.

Attention is devoted to the important aspects of the work of the chief English authors, while tracing the development of our literature.

A Social History of England. By FREDERICK BRADSHAW, D.Sc., M.A. 5s.

An elementary account for colleges and upper forms in schools of the social and economic development of England.

Textbook of Geography. By G. C. FRY, M.Sc. *Second Edition, Revised and Enlarged.* 5s. 6d.

For the middle and upper forms of schools. Stress is laid on the inter-connection of Physical Geography and Political Geography.

New Junior French Course. By G. A. ROBERTS, M.A. 3s. 6d.

A year's course in Reading, Grammar, and Translation into French, with material for oral practice, for use in the junior and middle forms of schools.

Direct French Course. By H. J. CHAYTOR, M.A. 2s. With Vocabulary French-English. 2s. 9d.

This book is designed for use by pupils of 12 or 13 years of age who are commencing the study of French.

French Essays, Matriculation. By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. 2s.

A carefully graduated course in Free Composition in French.

Education.

Principles and Methods of Teaching. By JAMES WELTON, D.Lit., M.A., late Professor of Education in the University of Leeds. *Second Edition, Revised and Enlarged.* 7s. 6d.

In this work the treatment is theoretical in the sense of setting forth a consistent body of doctrine. But that the principles and methods here set forth are practical has been proved by the successful working of them in school.

Teaching: Its Nature and Varieties. By BENJAMIN DUMVILLE, M.A., F.C.P., late Master of Method and Lecturer on Education in the Islington Day Training College. 5s. 6d.

An analysis of the processes of teaching as they occur in all subjects. The author examines the nature of the teaching itself, showing why certain methods should be employed.

Principles and Methods of Moral Training with Special Reference to School Discipline. By JAMES WELTON, D.Lit., M.A., and F. G. BLANDFORD, M.A., Lecturer in Education in the Cambridge University Training College. 4s. 6d.

This work treats of the general nature of good character—duty, virtue, conscience; of the school as a moral community in which good character is developed, &c.

Psychology, Experimental, in relation to Education, An Introduction to. By C. W. VALENTINE, D.Phil., M.A. 3s. 6d.

An Introductory Course in Experimental Psychology as applied to Education. for the use of Teachers and Students in Training Colleges.

Textbook of Hygiene for Teachers. By R. A. LYSTER, M.D., B.Sc., D.P.H., Medical Officer of Health for Hampshire, and Chief Medical Officer to the Education Committee. 5s. 6d.

School Organization. By S. E. BRAY, M.A., Inspector of Schools to the London County Council. With a chapter on "The Place of the Elementary School in a National System of Education," by Sir J. H. YOYALL. *Second Edition.* 4s.

Mathematics and Physics.

The School Arithmetic. An edition of *The Tutorial Arithmetic* adapted for school use. By W. P. WORKMAN, M.A., B.Sc. *Second Edition.* (With or without Answers.) 4s. 6d.

Those portions of *The Tutorial Arithmetic* dealing with the higher theory and all over-difficult problems are omitted.

Rural Arithmetic. By A. G. RUSTON, B.A., B.Sc., Science Tutor in the Department of Agriculture at the University of Leeds. 4s. 6d.

Specially suitable for use in secondary rural schools working under the schemes of the Boards of Education and Agriculture.

School Algebra. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers. 7s.

A course of Algebra as far as the binomial theorem for positive integral indices, suitable for upper forms.

Preliminary Geometry. By F. ROSENBERG, M.A., B.Sc. With or without Answers. 2s. 9d.

This is a textbook for young learners, beginning the study of Geometry between the ages of 11 and 13. From the beginning the author insists on the learner's reasoning from first principles. The language used throughout is simple.

Magnetism and Electricity, Intermediate Textbook of. By R. W. HUTCHINSON, M.Sc., A.M.I.E.E., F.R.G.S. 8s. 6d.

A course, both theoretical and practical, up to the standard of University Intermediate Examinations. Embodies the distinctive results of modern research.

Junior Experimental Science. By W. M. HOOTON, M.A., M.Sc., F.I.C. *Second Edition.* 3s. 6d.

A two years' course Physics and Chemistry, which students may commence when about thirteen years of age.

A First Course in Mathematics for Technical Students. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. *Second Edition.* 2s. 6d.

An easy course of Practical Mathematics including Arithmetic, Mensuration, and Algebra.

Engineering Science, A First Course in. By P. J. HALER, B.Sc., A.M.I.M.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. 3s. 6d.

Includes the elements of Applied Mechanics and Heat.

Complete Educational Catalogue, and Catalogue of Class Books for Secondary Schools, post free on application.

OCCASIONAL NOTES.

THE abolition of Greek as a compulsory subject in Responsions at Oxford should be of great benefit to education. It sets the schools free from uncertainty; it stops the further recruitment of that class of unwilling victims who associate Greek with a resented and unintelligible drudgery; it strikes a blow against the use of examinations for imposing compulsion in the supposed interests of particular studies; last, but not least, it should close the ranks of the lovers of classics and set them free to promote the cause of genuine Greek study among all classes of the community. There is nothing more certain than that, among the boys of the elementary schools of the country, there are many who are capable of profiting by a classical education in the fullest measure, and it is a regrettable fact that there are wide areas of the country, and even some large cities, where opportunities for such study no longer exist. It is to this problem that all who believe in classics should address themselves, and especially the Prime Minister's Committee on Classics, which is now sitting. All the endowments which exist, especially those at the older universities, are required, and it would be a fair demand to make of the Civil Service Commissioners that, in the examinations for all posts for which a good secondary education is required, Greek should find a place on an equality with other subjects. For Greek is not a course whose full profit can be attained in one year or two; but the profit for the right student, when it is attained, is very great, and it should be within the reach of all who have the capacity for it.

The Abolition of Compulsory Greek.

THE forms of non-teaching service recently declared by the Board of Education to be "Qualifying" under the Superannuation Act cover nearly, but not quite, all those which a teacher may fairly claim to include in the thirty years of service necessary for retiring benefits under the Act. Inspectors of schools in any Government Department in England, Scotland, or Ireland, and officials of the Board of Education, or of the Scotch and Irish Education Departments; officials of a local education authority whose salaries are paid out of the education rate (but not, of course, municipal or county officials generally); officials of any non-profit-making school or institution or university, in which teaching service would be regarded as recognized or qualifying, may count such service, both past and future, as "qualifying." Teachers in technical schools may be allowed normally up to five, in special cases even up to seven, years of industrial or commercial experience. Finally, domestic economy teachers lent to the Navy and Army Canteen Board as from April 1, 1919, may include such service. The Board have also decided that actual teaching service in profit-making schools may be considered "qualifying" if the Board are satisfied that such schools "were conducted on the same standards of efficiency, and with the same general principles, as schools under public control"; but this refers only to service prior to April 1, 1919. Existing secondary-school teachers, the class chiefly affected, must note that the terms are general, but that, obviously, the efficiency of each school must be a matter for individual consideration. It will lie with the teacher to produce evidence of that efficiency when a school, as has happened in many cases, has ceased to exist.

THE syllabus of the new Certificates of Education, to come into operation on July 1, 1921, have now been issued by the War Office. There are to be three certificates for men—third, second, and first class—and a special certificate for officers and men. For the third class the subjects are reading, writing, arithmetic, and elementary history and citizenship. For the second, English, mathematics, imperial history and citizenship, and an optional subject, either a language or a group, such as agricultural, handyman, music, hygiene, shorthand and typewriting, or mechanical drawing. The first class includes the above, with geography and map-reading instead of imperial history. Candidates for the special certificate must pass in English, mathematics, an ancient or modern language, and two subjects from such groups as economics and citizenship, languages, logic, mechanics, physics, zoology, civil engineering, commerce, and music. This is an excellent innovation for the soldier, for on his demobilization he will have a civilian calling at his command, and be able to become a useful and productive citizen. In pre-war days, when he could not obtain admission into the Corps of Commissionaires, he drifted into blind-alley occupations, and in extreme cases into criminal habits. Whereas under this new scheme he can become a gardener, handyman, bandsman, hospital attendant, clerk, draughtsman, builder, or science demonstrator. But the success of these proposals will depend on the type of schoolmasters the army can attract. At last salaries of teachers are on the up-grade, and, unless the Army Council can persuade capable teachers to

Army Certificates of Education.

undertake this new work, the soldiers will not enter for these certificates in the numbers they should.

WE recently had occasion to refer to the steps taken by the London County Council to secure the necessary supply of teachers for the compulsory day continuation schools which are to come into being under the Act of 1918. The full scheme of the Council's Higher Education Sub-Committee has since been published, and it certainly foreshadows a wise and enlightened policy on the part of the Council. The continued education of young persons up to sixteen is to be of a general character, the curriculum embracing such subjects as English, history, geography, economics and civics, mathematics, science, drawing, domestic instruction for girls and manual instruction for boys, and especially physical training, which is compulsory under the Act. Having regard to the time available, we presume that it is not contemplated to attempt all these subjects in all schools, but that the list represents what the principal (as the head of the school is to be called) may choose from, according to the particular circumstances of the school. In the case of young persons between sixteen and eighteen the instruction may have a vocational bias, and include the underlying principles of various technical subjects for those coming from factory or workshop, office or bank, as the case may be. The Sub-Committee hope to be soon in a position to consider the whole curriculum. We are glad to see that they are quite alive to the importance of training young persons to a wise use of the expanding hours of leisure.

**Day Continuation
Schools in
London.**

SO much for the purely educational side of these proposals. As to the administrative side, we note that the report favours, as on the whole the most convenient arrangement for all parties, two half days of four hours each week. Schools are to be established near the place of employment rather than near the place of residence; and, except in the case of seasonal trades, facilities for instruction are to be continuous throughout the year, though no teacher will be required to work more than 44 weeks a year. As a first provision, 22 schools are to be established. Each school is to provide 360 places, but as each pupil will attend only two half-days a week out of ten, this will allow for an enrolment of 1,800 pupils. Subject to the agreement of the Board of Education as to the "appointed day," these 22 schools are to be opened on or about January 1, 1921. It is proposed that the voluntary principle shall be recognized and encouraged, in the case of large firms desiring to institute (as some have already instituted) schools for their employés; and that this principle shall be extended to religious organizations and to other bodies willing to provide premises, and possibly desiring to share the control of schools. But in all such cases it will, of course, be the Council's duty to see that its general policy is being carried out.

**Their
Administration.**

THE preaching of Dr. Jowett in Durham Cathedral is an event which, as Carlyle would say, is "significant of much" in the history of education as well as the history of the Church. It means that there is a new atmosphere in which the synthesis of hitherto antagonisms becomes not only possible but inevitable. The war has

**The Old Religious
Difficulty.**

strengthened our sense of national solidarity. There was no thought in the trenches of the difference between Church and Dissent, or between Protestant and Catholic. The common danger united all in a common effort. In the spirit thus engendered there is no going back to the old "religious question," as we knew it in the first decade of this century. There are no doubt some few professional fighters left who drank the joy of battle with their peers in those far-off wellnigh forgotten days. But we have no use for them to-day.

The noblest answer unto such
Is perfect stillness when they brawl.

Our whole conception of education has become broader and richer. We conceive of it no longer as the inculcation of the three R's plus the Catechism. It is the preparation for complete and generous living. And when men rise to bigger and broader conceptions, when they fix their aims high, they do not squabble. The squabblers are those who are fixing their attention on the niggling, petty things of life.

IT was some few men and women, of different schools of thought in religion, but holding this broader, higher view of education, who met together in 1908 to think out the terms of an educational settlement which should be acceptable to all parties. Their report was issued in 1910, and their main proposals were embodied in a Bill presented by Mr. T. E. Harvey, M.P., in July, 1911. Mr. Harvey and Sir Michael Sadler were the Joint Honorary Secretaries of the Executive. The proposed plan of settlement safeguards the religious freedom of the parent. It delivers the teacher from the tyranny of the tests and imposes the duty of religious teaching on none except those who voluntarily undertake it. Above all, it saves the school from that wholesale secularization which at one time seemed to be the only possible escape from the perpetuation of barren controversies. It recognizes that unity is not the product of a system imposed by authority from above, but is a spiritual growth from within, the outcome of a mutual *rapprochement* among both teachers and taught. Administrative unity there must be, but within that framework there is left free scope for the effort of varying religious groups. It is on these lines, thoroughly thought out, as they have been, by this Committee, that the work of unification must proceed, and the "two nations" created by the Act of Uniformity become welded into one without the loss of any vital quality belonging to either. And the time is ripe. The very fact that the religious difficulty is not mentioned in the Act of 1918 makes that Act more religious than any of its predecessors.

**Towards
Educational
Peace.**

THE new circumstances caused by the war in all professions put an additional burden on the masters of upper forms in schools and on the Appointments Boards at the universities. Not the least important function they have to perform is to advise their pupils as to the careers they can follow after their education is finished. Before the war the regular thing was for the cleverest pupils to go to the university, gain there an honours degree, and then attempt the competition for the Home or Indian Civil Service. That service once entered, they felt safe for life, as they knew they would have a competence

Careers.

until the age for retirement, when an adequate pension would enable them to end their days in comfort. But to-day the goal of £1,500 a year, coupled with the burden of a K.C.B., does not appear so attractive. For £1,500 now does not mean more than £700 at pre-war prices; and Sir John Smith cannot live as cheaply as plain John Smith, Esq. His work is rendered less efficient by home worries; his children do not have the education he would like; he cannot return the hospitality he is forced to accept on the same scale as he has received. The same law is working with the other professions. A few big lawyers may make £20,000 a year, but the average is probably under £2,000; a few fashionable physicians can boast of £6,000, but the general practitioner has to be content with £700 to £1,500; the chartered accountant is no better off. The Army and Navy have never received a living wage, while the clergyman and the schoolmaster have ceased even to expect one. So it is a heavy responsibility to recommend a boy to go into a profession, with its long apprenticeship. He may be condemned for life to black-coated servitude among the *nouveaux pauvres*. It seems as if the best brains of the country will, in the future, go more and more into commerce, if only to gain an income on which they can live. This tendency is more apparent in France and Italy, where dukes and minor fry are becoming junior partners in large firms. It is the only way to keep their estates intact and to keep their mansions open. The same will occur in this country unless the fees of professional men are increased in the same proportion as those of the manual labourers.

THE important question has been raised whether parents of elementary-school children may be asked to contribute to the cost of school journeys and educational visits, including, for example, visits to theatres, for the purpose of witnessing Shakespearean performances.

Parents and School Journeys.

We call the question important because it involves that which gives life and reality to much of the teaching, especially in geography, Nature study, literature and history. No good teacher of any of these subjects could remain satisfied with what can be done within the four walls of a schoolroom. Mr. Fisher, replying to Mr. J. H. Thomas, points out that technically everything depends upon whether the school journey counts as an attendance at school and forms an inherent part of the curriculum for the purposes of the time-table. If it is so treated, a charge would be illegal; if it is not so treated, a charge may be made, provided that the arrangements for payment are such as the Board can approve. The significance of the qualification is that the Board would object to any arrangement which excluded a child from the benefits of the school journey or visit merely because his parents could not afford to contribute to the cost. Mr. Fisher's pronouncement seems to us likely to work very well in practice, though it cannot be called strictly logical if, as we strongly hold, the school journey is essential to sound teaching.

THE paper read by Mr. J. H. Taylor at the annual meeting of the Association of Technical Institutions on "Day Continuation Schools" gives an interesting account of what must be regarded as a successful experiment at Dewsbury. A number of manufacturers and employers in that borough undertook to give their young employees

the privilege of attending a school one day a week without reducing their wages, the main objects of the school being the training of character, the formation of intellectual powers, and the cultivation of physical soundness and vigour. Within two weeks of the opening of the school, 500 pupils were enrolled, and the number of employers who allowed their young people to attend was 21. Different methods have been adopted by the firms in their arrangements for releasing boys and girls from work; generally, it has been necessary to augment the staff to the extent of one-fourth of the number of youths liberated. It is encouraging to learn that firms that have taken an interest in the scheme, and have carefully organized a system to provide for the absence of the boys and girls, have proved beyond doubt that, so far as the woollen industry is concerned, it is quite possible to produce a working scheme under which the young people may be spared from their employment without seriously affecting the work in the mills.

MR. TAYLOR is convinced that it is advantageous for pupils to attend on one whole day a week rather than for a limited number of hours on different days. He says the employers, pupils, and teachers, for excellent reasons, all prefer that arrangement. He is of

Hours of Attendance.

opinion, and it is a more or less obvious conclusion, that the success of a day continuation school depends entirely upon the kind of teachers engaged. Good teaching qualifications are essential, but high academic attainments unnecessary. Personality is the one thing needful. Such experience as is gained by successful evening school work, or by various types of social work among young people, should be a recommendation. As may be readily imagined, the preparation of a suitable time-table for a school, the pupils of which attend one day a week, is a difficult and, according to Mr. Taylor, disappointing task. Another difficulty also incidental to the intermittent attendance of the pupils is that of creating a corporate life throughout the institution. In Dewsbury, an attempt has been made to overcome the difficulty by social gatherings at the school on Saturday evenings and games on Saturday afternoons.

WE agree with Mr. A. Mansbridge, who contributed a paper on "Technical Schools and their Part in Adult Education," at the meeting of the Association

Adult Education.

of Technical Institutions, that a crusade against the unworthy use of hours of leisure is the need of our time. And there can be no better way for the worker to tread in his off-hours than that which leads to the development of his interests or his skill. Mr. Mansbridge, therefore, pleads for a liberal conception of educational responsibility on the part even of institutions specially concerned with technical instruction. The technical institute of to-day, he says, must face the problem of attracting the adult, fully conscious of the fact that it must be responsive to many varieties of capability and character, which will only seek for satisfaction in their own way. It may be that the need for education will be forced home to the minds of English people so powerfully in the near future that they will be willing to attend institutions which are not yet adapted to their real needs; but, unless those needs are met, they will not be able to maintain this sense of duty for long.

HOBBIES.

SINCE in these days of keen competition, education is too often confused in the public mind with the acquirement of facts and the passing of examinations, and since its success is judged by the earning power of the young people leaving our schools and colleges, there is danger lest its true aim should be forgotten. An education which stops short at providing the equipment for a life of work, and takes no account of the hours of leisure, is surely far from satisfactory. It is necessary that schools should fit their pupils for the work they are to do in the world, and consequently under the present system, the majority of children are forced to work in the same grooves for the same examinations and tests. It is therefore small wonder, that having to strive so hard for good results which will mean so much to them, they are apt to consider these results as the end of education, while there is a real danger lest the teachers should also give them too important a place in their minds. The argument so often advanced against shortening the working hours in the various industries—that people do not know how to use leisure time—is a grave reflection on our educational system.

The following account of an experiment that is being tried at the Girls' County School, Harrow, to counteract this tendency may be of interest.

The scheme, which is in its infancy, and is therefore open to much criticism, was started in September last, because it was felt that comparatively few of the girls had any interests or hobbies outside their actual school work. School days are never the time when this lack of interest is most keenly felt, and it might be argued that, as the majority of the girls in the school would eventually have to earn their own livings, and many of them have necessary home duties in addition to their school work, any further demands would do more harm than good. However, after much discussion of the pros and cons, it was decided that the school ought not only to encourage the girls to take up hobbies, but that it must also provide the necessary time for them. By a careful rearrangement of the work, it was found possible to set aside one afternoon a week for their pursuit. So far as possible no homework is set for that evening, so that, if any girls wish to carry on what they have been doing at school, they may have time to do so.

The following is the preliminary list of hobbies that was presented to the school from which to choose: Art, basket-weaving, first aid, historical and geographical, literary (English and French), music, Nature study, and needlework. Every girl was required to take up one hobby, but she was absolutely free to make her own choice. It might be mentioned here that the girls are required to keep the hobby they choose for at least one year. When the voting was taken, it was found necessary to form two groups for the art hobby, two for the music, three for the literary, four for the needlework, and one for each of the others.

In a short space it is only possible to indicate very briefly the work of one or two of the hobbies.

The aim of the art hobby is to enable the girls to appreciate what is beautiful in form and colour, and to give them some knowledge of the lives and work of the great painters of all ages. In addition to their own work of designing, stencilling, &c., they visit studios, exhibitions, and galleries. In the summer there will also be a sketching club.

The historical and geographical hobby aims at giving its members some idea of architecture, both ecclesiastical and domestic. Opportunities are given to the girls of hearing both school and public lectures. They learn the history and the legends connected with churches and old houses within reach of the school; these they afterwards visit, accompanied by a geography as well as a history specialist, so that they may also be taught to appreciate the natural features of the country through which they pass. Some knowledge of stained glass, monuments, and brasses is gained, and appreciation is encouraged by these expeditions. In the summer it is hoped to start a camera club in connexion with them.

On fine afternoons the members of the Nature-study hobby

go for country rambles, on which they collect all sorts of treasures of plant and animal life. They visit the Zoological Gardens and the Natural History Museum, which are a source of never-failing interest. On wet days they arrange their collections and make Nature-study albums. The pictures and information collected in these books are really wonderful, and testify to the keen and intelligent interest taken in the subject.

The work of the literary hobby is most varied. Good plays and books are read and discussed, and sometimes dramatized; debates are held, original compositions are read, and occasional visits are paid to good plays produced in London.

Plain sewing, embroidery, lace making, crochet, and knitting all find a place in the needlework hobby; but enough has probably been said to show something of the working of the scheme.

That the girls appreciate the hobbies afternoon there is no doubt. There is a happy buzz throughout the school, and a usual question when the closing bell rings is, "Can it really be four o'clock?" Many girls are striking out on their own lines into side-paths suggested by the main hobby; lecturers are sometimes surprised, and always pleased, with the intelligence and energy with which their lectures are followed up. So far as it is possible to judge in so short a time, the hobbies certainly seem to have a beneficial effect on the other work of the school, and there is no sign of any overstrain among the girls.

THE EDUCATION OF THE BODY.

THE new edition of the "Syllabus of Physical Training for Schools," now issued by the Board of Education, follows the general lines of its predecessors, but the lessons have been rendered more recreative in character and their formal nature materially reduced. Sir George Newman points out in his prefatory memorandum that unless the pupils are happy, alert, and eager, the most scientific and philosophic instruction has failed in its purpose. In Sweden of recent years there has been a great increase in the use of free movements, running, and dance steps, which have done much to introduce the æsthetic exercises Ling proposed, but never lived to organize. These have been given a prominent place in the new tables of the Board, in which "activity" exercises take up about half the available time instead of the seventh, or thereabouts, allotted to them under the 1909 scheme. Much attention is given to jumping and balance movements, which play a useful part in the sudden adaptations often required in daily life, while the types of movement such as span-bends, which are little appreciated by the youth of this country, are minimized or absent. Medical inspection has shown better results from a corrective standpoint in those schools in which there was an abundance of light movements and dance steps than in those where the work was more exclusively of the heavier and slower type.

Much more latitude is given to the class teacher to adapt the work to the conditions of his class and surroundings, an obvious advantage, yet one which postulates a higher degree of training in the teacher. For this reason local education authorities are urged to provide the necessary assistance by the appointment of competent persons to organize and supervise the physical training. With the present shortage of fully trained male teachers there is a little danger of the wholesale transplantation of the methods of training adults being applied to children whose powers and possibilities are of an entirely different order. So it is to be hoped the Board of Education and the larger local authorities will provide a series of courses for the help of existing teachers pending the supply of those more fully instructed from the training colleges.

In the section on exercises for younger children, the principal aims are rightly said to be to encourage alertness, maintain flexibility, and so avoid the need for corrective exercise in later years, to stimulate respiration and circulation, and incul-

cate a happy, independent spirit. This complies with the motto to be seen on the walls of most Central European gymnasia, and translatable as "blithe and bonny and good and gay." It is only in the spirit of the founders of modern gymnastics, Ling and Jahn, who were alike students of youth and nature, poets and philosophers, as well as practical organizers, that the problem of combining recreation with correction can be solved.

While the aims of the new syllabus show a distinct advance, and, reasonably interpreted, should lead to a marked improvement in national physique, some will miss the sections on correction of faults, especially as regards the fundamental positions. If these positions are once accurately acquired, all subsequent exercises exert a corrective effect; if they are inaccurate, many of the movements may exaggerate instead of improving defects of posture or carriage. The syllabus wisely advises that special attention might be given to such faults in the classroom or hall on days when the weather renders outdoor exercise impracticable. Class teachers would be well advised if they could accompany their pupils occasionally to a medical inspection, and consult with the medical officer as to positions assumed during exercise. These can be seen accurately only when the pupils are partly stripped. A little observation of this kind has lasting effects on teaching, and the association of the gymnastic mistress with medical inspection in the girls' secondary schools has proved of great benefit to all parties. Similarly, opportunities may be taken of observing the true posture of pupils during the progress of swimming lessons.

The stress placed on games adapted to all children and all ages is most welcome, and all will echo the hope of the Board that the instruction in the schools and playing fields will not be hampered through lack of time, equipment, or accommodation. Full powers for such provision exist in the Education Act of 1918.

While physical education rightly carried out will improve the physique, errors in position consistently persisted in can do a child harm as well as check the corrective efforts of natural growth, so that all who take this subject would be well advised to study the principles on which the actual exercises and their combinations are based, that there may be skilled adaptation and modification, not mere mechanical repetition.

PERSONAL PARAGRAPHS.

THE death of Sir Robert L. Morant, K.C.B., first Secretary of the Ministry of Health, and formerly permanent Secretary to the Board of Education, is a severe loss to all classes of the community. Educated at Winchester and Oxford, he commenced his public educational work in Siam as tutor to the Royal Family. Later, at the request of the King of Siam, he organized public education in that country. On returning to England, he interested himself in social and educational work in East London. In 1895 he became Assistant Director of the newly instituted "Office of Special Inquiries and Reports" in the Board of Education, and began a period of close working with Sir Michael Sadler. When the Unionist Government became committed to an educational policy, Sir John Gorst took Morant as his private secretary. The passing into law of the Education Act of 1902 was largely due to his indefatigable work, and Mr. Balfour decided that Morant was the man to carry out the Act. He was appointed Acting Secretary of the Board in 1902, and in 1903 became Permanent Secretary. His handling of the many difficulties arising from the religious and other controversies engendered by the Act enabled him to administer it in spite of the most determined opposition, and to justify it in the eyes of reasonable educationists. His insistence on the details of administrative organization gave rise occasionally to criticism, but no man was really less bureaucratic than Morant. When the National Insurance Act was incepted, Sir Robert

Morant was called to the Chairmanship of the Insurance Committees, and again more than justified the choice.

THE death of Prof. James Emerson Reynolds will be deeply regretted by all interested in scientific progress. An Irishman by birth, Dr. Reynolds spent most of his life in his native country. Although he qualified for the medical profession by becoming a licentiate of the Edinburgh College of Physicians and Surgeons in 1865, and also of the Dublin College of Physicians in 1873, his natural aptitude for chemical investigation led him to forsake medicine for chemistry, and in 1875 he was appointed to the Chair of Chemistry and Chemical Philosophy at Dublin—a position which he retained until 1903. His many and important researches gained him the Fellowship of the Royal Society in 1880. He served as president of the Society of Chemical Industry in 1891, president of the chemical section of the British Association at Nottingham in 1893, and president of the Chemical Society in 1902-3. His text books on "Experimental Chemistry for Junior Students," published in 1886, opened the avenues to chemical investigation in a new and fascinating manner, and were of invaluable service to teachers and students for many years.

PROF. WINIFRED CULLIS, of the London (Royal Free Hospital) School of Medicine for Women, is giving a course of lectures at Vassar College, U.S.A. As chairman of the International Relations Committee of the Federation of University Women—a body which is working in conjunction with the Association of Collegiate Alumnae of America—she proposes later to visit universities and women's colleges throughout the Eastern States before her return to England in May next.

MISS C. W. DIXON, vice-principal of Malvern Girls' College, Worcestershire, has been appointed head mistress of the Maynard School, Exeter. Miss Dixon graduated B.A. London with Honours in History, and holds the Cambridge Teachers' Training Diploma. She takes up her new position next term.

MR. W. E. H. BERWICK, who has recently been appointed lecturer in mathematics in the University of Leeds, is a native of Bradford and one of the most eminent of the younger generation of pure mathematicians. He was educated at the Bradford Grammar School, where he was one of the most promising pupils of Dr. Clement Jones, head of the Mathematical Department. He entered Clare College, Cambridge, as a scholar, and graduated as Fourth Wrangler in 1909. He gained a First Class in Part II of the Mathematical Tripos in the following year, and won one of the Smith's University prizes in 1911. He was assistant lecturer in the University of Bristol for two years, and afterwards became lecturer in mathematics in University College, Bangor. During the war he rendered valuable service on the Technical Staff of the Anti-Aircraft Experimental Section of the Munitions Department at Portsmouth, making important contributions to the experimental and comparative theory of gunnery. He has published a long series of papers in the Proceedings of the London Mathematical Society.

THE Governing Body of Alleyn's School, Dulwich, are to be congratulated on securing the services of Mr. R. B. Henderson as head master. Mr. Henderson received his early education at Bristol Grammar School; he is a Scholar and Goldsmith's Exhibitioner of New College, Oxford, and he graduated M.A. with First Class Maths. in 1901. He has held appointments at King Edward's School, Birmingham, Rugby School, and, since 1911, he has been head master of the Strand School, Brixton Hill.

THE vacant head mastership at the Strand School is to be filled by Mr. S. R. K. Gurner, who has been an assistant

master at Marlborough College for some years. During his army service Mr. Gurner was awarded the Military Cross and was mentioned in dispatches.

* * *

THE University College of North Wales, Bangor, has chosen Major W. P. Wheldon, an old student of the College, as Registrar. For many years the post has been held by Prof. J. E. Lloyd, who was also professor of history in the College. Major Wheldon has studied at St. John's College, Cambridge, as well as at Bangor, and has qualified as a solicitor. He served throughout the war with the Welsh Fusiliers and, in 1917, was awarded the D.S.O.

* * *

MR. H. A. DENHAM, Physics Master at Hymer's College, Hull, has been appointed head master of the Folkestone Harvey Grammar School. Mr. Denham is a Foundation Scholar and a Prizeman of St. John's College, Cambridge, and obtained a First Class in the Natural Science Tripos in 1901. He was formerly on the staff at South Shields High School. During the war he was major in command of a siege battery in France, and was awarded the D.S.O. and mentioned in dispatches.

* * *

MR. A. A. COCK has been appointed to the Chair of Education and Philosophy in the University College of Southampton, *vice* Major Shelley, who has taken up the Directorship of the Army School for Training Teachers at Newmarket.

* * *

THE head mastership of the Mundella Secondary School, Nottingham, has been offered to Mr. R. B. White, who has been head master of the County School, Purley, since 1914. Mr. White has seen service as an assistant at Hulme Grammar School, and for some eight years was on the staff of the Middlesbrough High School.

* * *

MR. H. HAINES, Chemistry Master at King Edward VI Grammar School, Southampton, has accepted the head mastership of the Junior Technical School, Middlesbrough. Mr. Haines was educated at Barry County School and Birmingham University. He has held appointments at Glossop Technical Schools, Duke's School, Alnwick, and the County School, Bury St. Edmunds, and his tenure at Southampton dates from 1915.

* * *

AT the last meeting of the Newcastle-upon-Tyne Education Committee Mr. T. Walling was appointed Director of Education as from March 1, 1920. Mr. Walling has been acting director since Mr. Percival Sharpe left Newcastle for Sheffield. He was formerly Secretary for Education in the Borough of Brighouse, and is well known in connexion with his work as a former honorary secretary of the Finance, Parliamentary and General Purposes Sub-Committee of the Association of Education Committees, and as a member of the Executive of the National Association of Education Officers.

* * *

THE decision of the Merionethshire County Council to appoint Mr. Haydn Jones to the newly-created office of Director of Education will be received with mixed feelings in Merionethshire. Mr. Jones formerly acted as honorary secretary to the Education Committee and is now Member of Parliament for the county.

* * *

MR. ALFRED C. BOYDE, the newly appointed Director of Education for Northampton, has already seen considerable service in educational administration. Formerly Assistant Director for Hampshire, he has for the past twelve years been Director of Education for Darlington.

* * *

MR. R. B. MORGAN, Junior Houses and Boarding House Master at Whitgift Grammar School, Croydon, has been appointed Inspector of Schools under the Croydon Education Committee. Mr. Morgan was educated at Wolsingham and Audlem Grammar Schools and the Durham College of Science.

A prizeman of Durham College, he obtained the M.Litt., Durham University, in 1910. He has had considerable teaching experience at Wolsingham, Durham, and at Magnus Grammar School, Newmarket, and was appointed to Whitgift in 1903. He has published many texts on mathematics for junior forms and four volumes of Readings in English History from original sources.

* * *

MR. T. HERDMAN, Lecturer in Geography and Physical Instructor at the Municipal College, Hull, has been appointed Assistant Director of Education for Bedford. Mr. Herdman, who is a prizeman of Durham University, was educated at the Consett Technical Institute and Armstrong College, Newcastle. He has been lecturing at Hull since 1913, and is well known as the author of several books and pamphlets on geography.

ONLOOKER.

TOPICS AND EVENTS.

SUMMER SCHOOL OF SPEECH TRAINING.—A Summer School of Speech Training will be held at Stratford-upon-Avon from July 30 to August 14. The school has been organized by the Association of Teachers of Speech Training, under the direction of Miss Elsie Fogerty. The usual Summer Shakespeare Festival will be carried out during the month of August. The course will include voice training, phonetics, lectures in public speaking and the delivery of lectures, verse diction, dramatic study, reading and recitation classes, study and cure of speech defects. A special lecture course of one hour daily will be held for teachers who are unable to make the full attendance. Miss Ruby Ginner has arranged to conduct a Summer School of Classical and National Dancing and of Mime at Stratford from July 30 to August 13. The School of Folk Song and Dance, organized by the English Folk Dance Society, will be in session during August. Further information can be obtained from the Secretary, Central School of Speech Training, Royal Albert Hall, London, S.W.7.

SUMMER SCHOOL OF THEOLOGY, OXFORD, 1920.—A Summer School of Theology of an inter-denominational character will be held at Oxford from July 26 to August 6, embracing about forty lectures, under the general heading of "Aspects of Contemporary Theology," which will be treated in connexion with the philosophy of religion, Biblical study, comparative religion, and current movements in sociology, science, literature, and art. The lectures will be given in the Hall of Trinity College. The school will be opened with an address by the Dean of Carlisle. Communications may be addressed to the Rev. Dr. Carpenter, 15 Marston Ferry Road, Oxford.

INTERNATIONAL FEDERATION OF UNIVERSITY WOMEN.—The first meeting of the International Federation of University Women, which will include delegates from the women's colleges throughout the world, will meet in London in July next. The chairmen of the International Federation are Dean Virginia Gildersleeve, of Barnard College, Columbia University, U.S.A., and Prof. Winifred Cullis, of the London (Royal Free Hospital) School of Medicine for Women, University of London.

HOLIDAY COURSE IN PHYSICAL EDUCATION.—Mr. H. G. Junker has arranged again this year a holiday course in physical education, on the lines of Ling's Swedish System, at Silkeborg, Denmark, from July 30 to August 26. The fee for the course is £12. Mr. Junker was formerly special instructor and inspector to the West Riding Education Committee. Further particulars and application forms may be obtained from Mr. Junker, Silkeborg, Denmark.

WAR MEMORIAL FUND.—An appeal for funds, signed by the Earl of Rosebery and Sir Edward H. Busk, is being made to establish a War Memorial for the University of London Officers' Training Corps. In addition to representatives of the University, the Appeal Committee includes three of the Field-M Marshals who took a distinguished part in the war, viz. Marshal Foch, Lord French, and Sir Henry Wilson. Other members are Lord Haldane, the official parent of the Officers' Training Corps; Major-General E. B. Ash-

more, Colonel Maxwell Earle, and Major-General Sir Arthur Lyndel-Bell, who have been closely connected with its administration at the War Office. The hon. secretaries, Major B. M. Cloutman, V.C., and Bt.-Major A. C. T. White, V.C., are the two survivors of the five former cadets of the contingent who gained the V.C. during the war. The number of past and present officers and cadets who have served in the war as officers is 4,197. The first commissions granted were 3,787 in the Army, 385 in the Navy, and 25 in the Air Force. These officers served on every front in the war, and assisted in the defence of London, one of them bringing down in flames a Zeppelin near the city and later a Gotha aeroplane. Of these officers 657 are known to have fallen in the war, but it is feared that this number may be increased when full information is received. The number of distinctions gained in the war is 1,650, including V.C., 5; D.S.O. and Bars, 54; D.S.C., 8; M.C. and Bars, 588; D.F.C. and Bars, 10; A.F.C., 9; Mentions in Dispatches, 707; *Croix de Guerre* (French), 27; (Belgian), 15; Silver Medal for Military Valour (Italian), 5; Distinguished Service Medal (United States), 2. The Appeal Committee consider that any scheme for a War Memorial in connexion with the University of London O.T.C. should include a Memorial in London, and therefore propose to allocate to such Memorial a suitable sum from the fund which may be collected as the result of this appeal. As supplementing the Memorial in London, it is suggested that a permanent Hall might be provided for the Standing Camp of the Contingent at Great Kimble, near Princes Risborough, Buckinghamshire. It is proposed to dedicate a personal memorial at the Standing Camp to Lieut.-Colonel Arthur Egerton, Coldstream Guards, first Adjutant of the University of London O.T.C. (1909-13), who fell in action near Loos on September 29, 1915. The amount which it is hoped to raise for the complete scheme is £30,000. Contributions to the fund should be remitted to the Hon. Treasurer, Capt. T. Ll. Humberstone, at 46 Russell Square, London, W.C.1.

READING AND A UNIVERSITY CHARTER.—University College, Reading, draws its students from a wide area embracing six adjacent counties, and already includes faculties in Letters and Science and departments of Fine Arts and Domestic Subjects. It is the centre of an important agricultural and horticultural district and works in close association with the British Dairy Institute and the Research Institute in Dairying. It already has six hostels, and needs further accommodation for a steadily increasing influx of students. Yet those students must graduate as external students of the University of London, which, as a merely examining body, gains the credit attaching thereto. Excluded therefore from all voice in determining the conditions of the degrees for which they are preparing their pupils, the Reading professors and lecturers labour under a loss of that freedom which is indispensable if teachers are to give of their best. There is little wonder therefore that Reading should desire to obtain a charter for a university of its own, and its case appears to be a strong one—the more so that it would not be trenching upon the domains of other universities, which are everywhere finding it difficult to meet the claims upon their own resources.

CITY OF LONDON COLLEGE DAY SCHOOL OF COMMERCE.—A limited number of free places are to be awarded, on the results of an examination, to students who, in the opinion of the Governing Body, cannot be expected to pay the ordinary fee. Certain student-ships are reserved for candidates under sixteen who are fourteen years of age or more on August 1 next, and others for those who are more than sixteen years of age on that date. Students will be selected by interview and examination on June 3 next. Forms of entry, which must be returned by May 31, can be obtained from the Head Master of the school, White Street, Moorfields, E.C.2.

A SUMMER School of Spanish, to be held at Liverpool University, is announced for the early part of September. Some five hours' lectures and classes daily are to be held, the linguistic classes being conducted jointly by English and Spanish teachers and combining conversational practice with grammatical instruction. Both elementary and advanced students will be catered for. A feature of the afternoon classes is to be a course of practical Spanish phonetics, for which it is hoped that the first Spanish Phonetic Reader to be published in England will be available. For the evenings an attractive series of lectures (in Spanish and in English) has been arranged on the literature, history, and life of Spain. During the course it is hoped to hold a number of conferences on the teaching of modern languages, with special reference to Spanish. The prospectus of the school may be obtained, after the beginning of May, from the director, Mr. E. Allison Peers, The University, Liverpool.

EDUCATIONAL FILMS.—A display of educational films was given in the Conference Hall of the University of London Club on March 16, 1920, by the Educational Films Company. Sir Richard Gregory, a member of the Club Committee, who presided, said that the educational use of the cinematograph was at present in its early stages, but he expected it would become a useful instrument in the hands of the skilled teacher. He hoped the new industry would secure the co-operation of teachers, and that suggestions for suitable films would be forthcoming. The ability of the cinematograph to hasten or retard such processes as growth and mechanical action was a specially valuable asset. The display included films illustrating geographical subjects, nature study, mechanics, and mensuration.

FOREIGN AND DOMINION NOTES.

FRANCE.

Recognizing education as a man-making process, more than one nation is alert to improve the making of the physical man. France is among the wakeful. With a subvention from the Minister of War, the Faculty of Medicine, in the University of Paris, has established a course of physical education. The new Minister of Public Instruction, M. André Honnorat, has been a leader in the crusade against tuberculosis, and, in formulating his policy before a recent session of the Conseil supérieur, he set school hygiene and physical education at the head of his programme. He would care for students at the universities and great technical schools as well as for children. Hostels should become general in university towns; the student should be enabled *primum vivere, deinde philosophari*. To back the Ministry in promoting physical education, there are associations such as the Groupe Sportif Parlementaire and the Comité National de l'Education physique et sportive, willing to provide trained teachers and the implements of training the young. It is expected that the whole question will be brought before the new Chamber at an early time.

On the Doctrine of the Sieve M. Honnorat is quite sound. He would make the highest culture open to all children; but for the democratic recruiting of a social *élite*, there must be, he says, *sélection par l'intelligence*, brains not fees being the condition of advancement. In the new French Chamber, the Bill of MM. Rameil and Laval (outlined in our January number) to promote systematic sifting, has been revived. It is a Bill the adoption of which would put France ahead of England. For those who fall through the sieve, continuation or technical schools will be required. The Continuation Bill of M. Viviani has now become the Dessoye Bill, and the preamble and clauses of it may be read in recent numbers of the *Correspondance de la Ligue de l'Enseignement*. This, too, is likely to engage the attention of the Chamber. But the most urgent of all reforms in France is to make obligatory attendance of the ordinary school a reality; the education of the adolescent offers peculiar difficulties where so many have escaped the full primary course.

As we have stated before, the political rebirth of France has been accompanied by a great spiritual exaltation and a desire for self-diffusion. In the address referred to, M. Honnorat described the intellectual expansion of France abroad as among the most important objects now to be pursued. "Le moment est venu," he said, "de porter rapidement à son maximum le rendement de notre beau plus trésor: l'intelligence française." To the measures and proposals for the diffusion of French culture already reported we add others. French lycées have been opened at Mainz on the Rhine, where in 1792 the citizens welcomed Custine. In the *Evenement* is ventilated a plan for the founding of a higher normal school, the special task of which would be to prepare young *agrégés* as teachers of French in foreign lands. There is being constituted a Société des lycées franco-brésiliens to establish French secondary schools in Brazil and "à resserrer les liens intellectuels et moraux qui unissent déjà étroitement l'élite française et l'élite brésilienne." It is noteworthy, by the way, that an appeal for such schools and such closer union came from Brazil; and, generally, there seems to be discernible in South America a tendency to revolt from American influence and to draw nearer to the Latin races in Europe. We view the diffusion of French culture without jealousy—rather, with pleasure and hope. But there is a rich Italian culture, not to be ignored. And there is an Anglo-American culture having as its bearers far-spread and vigorous nations. There is room for them all. Rome imposed her culture on conquered peoples, and the Pan-Germanist was minded to Germanize mankind. The New Age should see in cultures

growths not mutually destructive, but living and developing themselves by peaceful exchanges. Progress in this field is no longer by a survival of the fittest.

GERMANY.

According to the German political journals printed before the Revolution (with which we cannot keep pace) the *Reichsschulkonferenz*, or Imperial School Conference, will meet in Berlin at Easter.

How Reconstruction Advances.

Among the four hundred who confer will be representatives of Austria-Hungary and the Free State of Danzig. The subjects to be discussed include the *Einhheitsschule*, instruction in manual work, the training of teachers, technical unification of schools, and the private-school system. On the judgments of this Conference the *Reichsschulgesetz*, or Imperial School Law, now in preparation, will for the most part depend. But the demand for a *Grundschule*, or basic elementary school, is so general that a Bill for establishing such a school has already been drafted and is being considered by the Reichsrat. This Bill provides that the *Grundschule* shall cover four years of instruction, all public or private *Vorschulen* (preparatory schools) being abolished within a fixed time. German State Socialism is directing a strong attack on private schools as preserves of the rich and as fostering class distinctions. Outside the sphere of organization, the formulating of new principles of orthography has become a concern of the *Reichsausschuss*, or Imperial School Committee, which has summoned experts to deliberation. The Orthographic Conference of 1901 resulted in compromises; the new reforms are to be drastic and far-reaching. The *Orthographisches Wörterbuch*, be it Duden's or some other, that now lies on the teacher's desk will soon be obsolete.

For compactness we bring together into a paragraph some non-related indications of change in Germany.

Miscellaneous Changes.

(i) *Begabungsforschung*, or the psychological investigation of natural endowment, makes progress. Complaint is raised in Germany, as in England, that experimental psychology is hampered by the jargon in which it is expounded. Meumann ("Vorlesungen zur Einführung in die experimentelle Psychologie") and W. Stern are leading authorities. An example will show the methods that are being employed. At Hamburg, from 1,355 children ten years old, 630 boys and 360 girls were to be chosen for the middle school (*Mittelschule*). Under Stern's guidance, and with the co-operation of the teachers, the following tests were applied. The children had to explain *Beute*, *Onkel*, *Mut*, *Neid*; they were required to point out what in a story was contrary to sense; from two fables they had to draw the morals; long sentences only once dictated were written down from memory; events had to be described from pictures, missing words supplied in continuous passages, and disjointed words built into sentences.—(ii) Prussia introduced last year *kollegiale Schulleitung*, the conduct of a (primary) school by the teachers collectively. Württemberg is following the same system, and you will find a Council of Teachers (*Lehrerrat*) coming to resolutions which the director of the school (*Schulvorstand*) carries out.—(iii) The decree of September 19, 1919, opened the universities on specified terms to primary teachers. According to a new ordinance, both men and women teachers, having received leave of absence, may now study mathematics, physics, and chemistry at the Technical *Hochschulen*. But they must first prove their fitness by passing a special examination.

In the occupied region the Army General and Commercial College, Cologne, under its able Commandant, Colonel Heath, continues to do good work.

At Köln.

An interesting account of its activities is contained in "Notes Past and Present" (W. H. Smith & Son, 1s. 6d.)—a souvenir for past, a guide for present or future, students of the academy in the Hansaring.

CZECHO-SLOVAKIA.

The National Assembly in Prague has founded a Labour Academy which has been named the Masaryk Academy, after the President of the new Republic of Czecho-Slovakia. The aim of this Academy is

A Labour Academy.

to organize all technical labour in order to make full use of the capabilities of the people, as well as the natural wealth of the Czecho-Slovak State; to direct the work of the nation scientifically, and to utilize the experience, whether of brain-workers or manual labourers, for the benefit of all. President Masaryk, in a letter approving of the constitution of this Academy, pointed out that the great Czech pedagogue, J. A. Komenský, whom we call Comenius, conceived the same idea some three hundred years ago; and that it was gratifying that it should now be carried into effect.

UNITED STATES.

We have been bidden, from the American side, to look to the American Federation of Teachers for an important part of collective American opinion. The Fourth Annual Convention, assembled at Chicago, January 1, 1920, sent to President

The American Federation of Teachers.

Wilson good wishes for his speedy and complete recovery. It urged on President and Congress the passage in the next session of the revised Smith-Towner Bill, which provides for the creation of a Federal Department of Education and for a Federal appropriation of 100,000,000 dollars to encourage the States in the furtherance of education. To raise the funds needful for the maintaining and increasing of educational efficiency, the Federation of Teachers recommended taxes on land values rather than on buildings or goods produced by labour. They proposed a minimum salary of 2,000 dollars for teachers; also, teacher-members on all Boards of Education, and a teachers' council in every school. As to tenure of office, they claimed, after a reasonable period of probation, permanency during efficiency, dismissal being only for offences specified by law and after trial by a Board on which teachers were represented.

"The glory of any American university—certainly the glory of the Columbia University of to-day—is the large number of students who, by their own efforts, are earning all or part of the money needed to keep them in university residence." So writes President Butler in his Annual Report for 1918-1919, and he would not, although Columbia wants money, increase by a pennyweight the burden of such students. The total enrolment of students for the calendar year was about 26,000, and, in spite of its great size, the University has been successful in maintaining contact between teacher and student. Since the reduced purchasing power of money has embarrassed higher teachers, the authorities seek funds to establish the following scale of salaries:—

	Dollars.
For full professors, with the expectation of paying salaries of 10,000 dollars to a limited number of teachers of unusual distinction ...	6,000-8,000
For associate professors ...	4,500-5,000
For assistant professors ...	3,000-3,600
For instructors ...	2,000-2,400
For assistants ...	1,000-1,200

We remark incidentally that the President of Johns Hopkins University—we have received his latest Report—likewise contends that higher rates must be paid if the old standard of teachers is not to be lowered. Returning to Columbia, we observe that during the year the Faculty of Columbia College authorized the institution of so-called psychological or general intelligence tests as part of the college admission examinations. An interesting section of the President's report relates to the decline of classical studies in America, to be stayed, perhaps, as he thinks, by a greater insistence on ancient ideas and ideals, on the life, art, and thoughts of the Greeks and Romans, than on the niceties of grammar and expression. At Johns Hopkins they continue to lay stress on classical archaeology and art, and, even in the extra courses for teachers who cannot attend lectures at the usual hours, Attic black-figured and red-figured vases are studied, as well as Arretine and other Roman vases.

The best thing that a school can do for a child is to give him a strong impulse towards self-education. It is to promote self-education that the Home Education Division of the Bureau of Education has

Home Education.

mapped out reading courses for various ages, and postmasters are asked to display conspicuously in their offices the attractive descriptions of the courses, the books recommended being grouped thus: (1) The World's Great Literary Bibles, (2) Great Literature (ancient, medieval, and modern), (3) Reading Course for Parents, (4) Course for Boys, (5) Course for Girls, (6) Thirty Books of Great Fiction, (7) Thirty World Heroes, (8) American Literature, (9) Thirty American Heroes, (10) American History, (11) France and her History, (12) "After War" Reading Courses. About thirty courses on special vocational subjects also are being prepared. Thousands of Americans have already pledged themselves to complete a reading course.

With books there should dwell in the home another great educator—Music. The *School Review* (xxviii, 2) publishes an article headed "A Study of Applied Music." From this we learn that an inquiry made at Belmont, Massachusetts, showed that 57.48 per cent. of the senior high-school pupils and 48.16 per cent. of the junior high-school pupils had at some time studied music at home. For a long time teachers of music in the United States

Cambridge University Press

A Junior French Reader

By R. L. G. RITCHIE, M.A., Professor of French in the University of Birmingham, and J. M. MOORE, M.A., Rector of the Madras College, St Andrews. Crown 8vo. 4s 6d net

This book is intended to provide suitable readings for pupils who have been learning French for two or three years. The passages which it contains are selected from standard authors; they illustrate widely different types of French prose and verse, and they are comparatively easy. The authors feel that pupils who are old enough to study masterpieces of English Literature need not, when they learn a foreign language, be restricted to fairy tales or children's books devoid of literary merit and permanent interest, and if this book brings within their reach specimens of the French of some great writers, it will have fulfilled a useful purpose.

BY THE SAME AUTHORS

A Manual of French Composition for Universities and the Higher Classes of Schools. Demy 8vo. Third impression. 7s 6d net

"The authors are justified in claiming that this is a new departure in French Composition. It aims higher and sets a higher standard than any English manual with which we are acquainted."—*The Journal of Education*

"This is the best book on advanced French Composition we have yet seen. . . . A thoroughly good piece of work."—*The Times*

Translation from French. Demy 8vo. Second impression. 7s 6d net

"This work, based on the same principles as the authors' 'Manual of French Composition,' though primarily intended for academic purposes, can be read with interest and profit by all who are called upon to read or consider themselves capable of translating French. . . . The book is the outcome of long experience in teaching, and by the high standard of scholarship which it sets ought to dispel finally the belief that translation from French is a 'soft option.'"—*The Times*

The Cambridge Modern French Series

General Editor: A. WILSON-GREEN, M.A.

"The aim of the Cambridge Modern French Series is to make French teaching more intelligent and real, and therefore more interesting and effective."—*The Athenæum*

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

have been recommending that a home study of music should receive credit as a school subject. In America, as in England, children are often drawn from the piano and the violin by the too imperious demands of sums and syntax.

NEW ZEALAND.

The Education Report just received is for the year ending December 31, 1918. It indicates in an Introduction some recent changes and reforms—increases of salaries for teachers, of allowances for training-college students and for the conveyance of children to school, of grants for the maintenance of public-school buildings, the extension of practising schools, and so forth. Medical inspection, aiming at the prevention rather than the cure of physical ailments, was further developed in the year, but it did not reach all children in back-country schools. In one district where goitre was prevalent systematic treatment of fifty children was undertaken, and it is hoped henceforth to cure the complaint in its earliest stages. Primary education in general was efficiently maintained, and Maori children were well cared for. As to secondary education, the total number receiving it showed an increase of 10.4 per cent. on the number in the preceding year; but the pupils remained too short a time in the schools. The number of secondary-school pupils studying Latin diminished noticeably, only 57 per cent. of the boys and 44 per cent. of the girls including it in their course; while French was taken by 85 per cent. of the boys and by 93 per cent. of the girls. New Zealand has long been notable for the extent to which it has made secondary education free; it did so during the year in question for no less than 11,783 pupils. In the field of higher education—prosperously cultivated—we observe that of the 2,140 students attending university colleges 975 were receiving free tuition. The New Zealand University bestowed 161 degrees, only three the doctor's degree.

Examinations have always had many enemies, especially, as it has been cynically said, among those who could never pass them. With neither approval nor disapproval, but merely to exhibit New Zealand opinion, we quote what the inspectors of secondary schools think as to the comparative merits of examinations and an accrediting system, such as is known in the United States:—"There appears to be a general feeling that the time is ripe for the adoption of some form of accrediting as a means of entrance to the university. It seems probable that the innovation would to a certain extent be a real benefit to the secondary schools, for an examination syllabus inevitably has a cramping effect on the work of good teachers. This appears to be the case particularly in science, where a broad knowledge of fundamentals is acknowledged to be a more valuable preparation for university work than the detailed study of a somewhat restricted field. It is also notorious that written examinations do not invariably result in the selection of the candidates who are best qualified. The accrediting system would enable the principal of a school, the person who is really able to judge between individual pupils, to have a voice in the decision as to which of them are ready for university work. We suggest that in the case of perhaps half the candidates for matriculation the written examination is not only unnecessary, but is even to a certain extent harmful. Further, it seems possible that 'accrediting' may be used as a lever to encourage pupils to take a full four-years' secondary course, instead of attempting to scrape through matriculation at the end of the third year, and may thus discourage the entrance of the immature student upon a university course, and have a definite effect in raising the general standard of university work."

QUEENSLAND.

The University of Queensland, only some ten years old, is not yet large; the number of students who matriculated in March, 1918, was sixty. It seems to us to want more scholarships and more books. The Library—white ants, alas! trouble the main building—contains about 17,500 volumes. Now the Comenius Library at Leipzig rose from 160,000 volumes in 1910 to more than 230,000 volumes in 1919. Generous donors should enable the general library of the Australian academy to keep pace in growth with the special pedagogic library in the German town.

MESSRS. W. & G. FOYLE, LTD., the well known booksellers of Charing Cross Road, W.C.2, are prepared to send post free to any teacher any of their 22 separate catalogues, which give particulars of their stock of more than a million volumes. This firm is often able to supply certain new books at reduced prices, and their stock of second-hand educational works is very large.

CORRESPONDENCE.

COMMERCE AND EDUCATION.

To the Editors of *The Journal of Education and School World*.

SIRS,—We need to encourage everyone who is going into business to fit himself by his education for the part he will have to play in his trade and in the world. The number of schoolboys who intend to follow a commercial career is enormous in comparison with the 5 per cent. that go to a university from all the schools in England.

There are three grades of candidates in commercial life:—

1. Those who step into a berth in a family business after a university education.

2. Those who cannot stay at school much after sixteen, but who may be able to spare some time for further work, even when engaged in business.

3. Those who have to earn wages before the age of sixteen. Of these some capable boys manage to pick up an education bringing them eventually up to the level of Class 2.

There is plenty of provision made for Class 1. It is to the bulk of Class 2 and the pick of Class 3 that we should offer more opportunities for advanced education. From these aspirants the great business men of the future will probably emerge. They therefore deserve as a class the greatest care, if we mean what we say when we talk of education being needed in the counting-house.

By hypothesis these boys do not advance beyond the first leaving examination at school. How do we meet their requirements? We cant about general education, and we compel all pupils to go through a course that schoolmasters and dons call "general" for their own convenience.

The course is really still the old-fashioned course, which schools grudgingly allowed to be modified when the claims of English or Science became inconveniently pressing. Thus we have, as the only evidence of a general education for a boy of sixteen, an examination suited for pupils of literary tastes or future university dons—a most unbusinesslike generation. This test is taken by only a few, and can be passed by only a few. For, though Mr. Fisher extols the intellect of England, inspectors in close touch with boys say that only half the pupils in a secondary school have brains enough to tackle two languages other than their own with any success. Can this be said of other progressive countries?

For those pupils who have commercial leanings, perhaps seven-eighths of the whole, little care is shown. Yet they will form the bulk of the nation. Much has been said about the education of this huge body of workers, and lately a degree in commerce has been very wisely instituted. But this, again, is built up on foundations provided for a literary edifice suited to a small proportion of our pupils, perhaps one-eighth. Unless he has passed the "first examination," in company with future poets or astronomers and the like, the young merchant cannot take a commercial degree.

And yet there exists an examination of the London University which forms a far better introduction to a business career than, for example, the matriculation of that university, without being narrow or of a low standard. This London commercial examination appeals to minds of more practical character than does, for instance, the "Oxford Senior Local." It excites those to work who would never take interest in purely literary subjects—in short, it meets the wants of the vast army going into commerce. With all this we find that the very university that started it does not make this test the first step to a business degree; that a Government which has talked much of business training refuses, through its education department, to recognize it as one of those "first examinations" for which fees are paid by a grant.

We have not sufficient scientific knowledge of the effect of education to say what subjects are really the best mental nourishment. Much is asserted, little proved. Within bounds, more depends on the teacher than on the subject: on the manner of the study than on its matter. It is certain that uncongenial study is not necessarily fruitful. We find, then, as usual, that no new thing can be introduced into education, such as the wide French four-course scheme; that the seven-eighths are sacrificed to the one-twentieth preparing for the universities; and that old moulds are being used to cast new worlds. Such methods of reconstruction are unlikely to succeed.

PATON'S LIST of SCHOOLS and TUTORS

23rd ANNUAL EDITION NOW PREPARING.

An Aid to Parents in the Selection of Schools.

**EVERY YEAR THOUSANDS OF PARENTS
CONSULT THIS BOOK.**

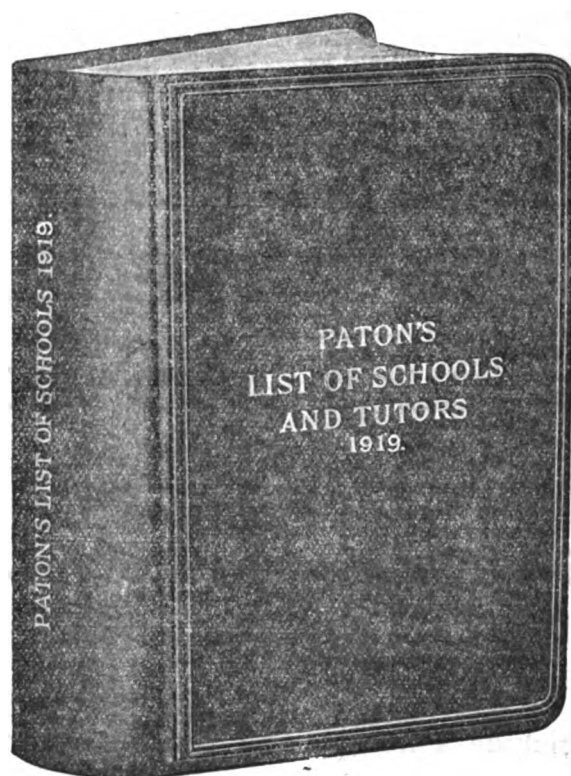

"I am glad to find I have got another pupil this term through the advertisement of the school in your book, so am glad I was persuaded to keep it in."

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"I enclose a request to have my notice renewed. I would not for anything leave it off now."

"When I first came here I spent over £50 in six months advertising in the leading papers—result, one boy. Then I came under your Agency—result, a steady stream of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

National Library of Ireland, Dublin.—"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term four pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

**Specimen Copy and full particulars sent free
of charge to Head Masters and Head Mistresses.**

J. & J. PATON, Educational Agents,

143 CANNON STREET, LONDON, E.C. 4. Telephone: Central 5053.

the government of the university. This latter has a Senate as its chief governing body, and three councils for internal students, for external students, and for university extension work. The Imperial College comes under the rule of the Academic Council for internal students, which is formed of twenty members, sixteen appointed by the eight Faculties and four official members—the Chancellor, Vice-Chancellor, Chairman of Convocation, and one other member of the Senate. Now, each Faculty elects a certain number of members to this Council, and the Imperial College can elect members only in the Faculties of Science and Engineering. Consequently they are swamped by the representatives of University and King's Colleges, who have professors in all Faculties; and the Imperial College, with its one or two representatives, cannot make its voice heard with any force. For the representatives of the larger colleges work, and work rightly, for their own particular institution.

Now, the External Council is formed of twenty-eight members, sixteen of whom are chosen by Convocation, *i.e.* the whole body of graduates. These representatives are likely to be either men of outstanding merit or men who have sufficient political knowledge to appeal to such a large electorate. Both these types of men are likely to view university matters from a broader standpoint than the specialist professor, whose outlook is quite naturally focused on his own particular work. If it were possible to increase the Academic Council by as many members chosen by the graduates as a whole, the Imperial College would probably find some supporters among them, and feel less lonely. For the chief concern of Convocation is to keep the value of their hard-won degrees as high as possible. They are too big a body to have individual axes to grind.

What is really needed in London, as the centre of the Empire, is a set of institutes where not only London graduates, but those from all other universities, could specialize for the master's and doctor's degrees. We understand that one for the study of history has just been founded, and we have already the School of Oriental Languages. Others will follow if an endowment can be found for them. The magnificent answer to the appeal for the Faculty of Commerce that has recently been published makes us hope that the university may at last be placed upon a firm financial footing. And as "he that hath to him shall be given," even the State may see fit to endow the university of its capital city with a habitation worthy of its work.

EXAMINER.

USE OF DESICCATOR IN EXPERIMENTS ON GERMINATION.

To the Editors of *The Journal of Education and School World*.

SIRS,—Osterhout ("Experiments with Plants," pages 26 and 27) recommends certain methods for placing seeds in a saturated atmosphere. Although the apparatus mentioned is neither difficult to obtain nor to fit up, an ordinary desiccator is certainly more convenient. Water is placed in the lower portion of the apparatus and the seeds on the perforated zinc tray.

The same piece of apparatus may also be successfully used as a germinator, when seeds in different stages of germination are required. Needless to say, cleanliness and precautions against mould are essential in both cases.—I am, &c.,

7 Queen Sq., Southampton Row, London, W.C.1.

The new premises include a library and reading room wherein are exhibited copies of all Ginn and Company's publications. Members of the teaching profession and others interested are cordially invited to call and inspect these.

The premises also include commodious stock-room accommodation which permits of the carrying of a very large amount of stock, and the consequent immediate execution of all orders. Should clients experience any difficulty in obtaining supplies, they are asked to report the matter immediately.

Recent and Standard Mathematical Text-Books

NOW READY.

ELEMENTARY ALGEBRA, Part I.

By **CLEMENT V. DURELL, M.A.**, Senior Mathematics Master, Winchester College; and **G. W. PALMER, M.A.**, late Master of the Royal Mathematical School, Christ's Hospital.

With Introduction and Full Answers, **4s. 6d.** Without Introduction and with Answers only where intermediate work is required. **3s. 6d.** Answers separately. **1s.**

In designing this book the authors have assumed that discussions in the text are rarely of value to the ordinary boy, and cannot replace oral instructions. In the text will therefore be found only a few simplifications, some definite rules, and a number of illustrative examples. The first part covers the usual course up to and including quadratic equations. It is provided with a large number of miscellaneous examples in which every endeavour has been made to introduce practical questions and make Algebra a living subject. The proofs have been read in the press by a teacher with wide experience of the needs of students at Technical Colleges and Evening Schools, whose practical suggestions have been adopted.

A BUSINESS ARITHMETIC.

By **C. PENDLEBURY, M.A., F.R.A.S.**, and **W. S. BEARD.** Crown 8vo, with or without Answers. **3s. 6d.**

This book is based on a scheme suggested by the Board of Education for the co-ordination of the teaching of Arithmetic with the teaching of the principles of the keeping of accounts. It contains all that is necessary for a first year's course for students in Day Continuation Schools, and also for pupils in Secondary Schools who may be preparing for a business career.

ARITHMETIC, Part II.

By **F. W. DOBBS, M.A.**, and **H. K. MARSDEN, M.A.**, Assistant Masters at Eton College. **3s. 6d.**

This book covers the ground required for the new combined syllabus of the School Certificate and Army Examinations, and deals in some detail with Mensuration. Logarithms are fully treated, and there is a large selection of Revision Papers, dealing with the various subjects in turn. *Part I of this book, which was published in 1915, is now in its Third Edition, price 3s. 6d.*

Pendlebury's Arithmetic. With 8,000 Examples. By **C. PENDLEBURY, M.A.**, formerly at St. Paul's School. 27th Edition. 5s. 6d., or in two parts, 3s. 6d. each. Examples separately, 4s., or in two parts, 2s. and 2s. 6d.

Pendlebury and Robinson's New School Arithmetic. 14th Edition. 5s. 6d., or in two parts, 3s. 6d. each. Examples separately, 4s., or in two parts, 2s. and 2s. 6d.

Pendlebury and Beard's Commercial Arithmetic. 14th Edition. 3s. 6d., or in two parts, 2s. each.

Pendlebury and Beard's Elementary Arithmetic. 14th Edition. 2s.

Pendlebury and Beard's "Shilling" Arithmetic. 548th Thousand. 1s. 9d., or with answers, 2s. 3d.

Pendlebury and Robinson's New "Shilling" Arithmetic. 12th Edition. 1s. 9d., or with answers, 2s. 3d.

Pendlebury and Robinson's Junior Arithmetic. 127th Thousand. With or without answers, 2s. 6d. Examples separately, 1s. 6d., or with answers, 2s.

Pendlebury's Preparatory Arithmetic. 4th Edition. With Revision Papers, 2s. 6d.

Pendlebury's Exercises and Examination Papers in Arithmetic, Logarithms, and Mensuration. 8th Edition. 3s. 6d.

Pendlebury's Revision Papers in Arithmetic. 2s. 6d.

Baker and Bourne's Public School Arithmetic. By **W. M. BAKER, M.A.**, and **A. A. BOURNE, M.A.**, of Cheltenham College. 5th Edition. 5s. 6d., or in two parts, 3s. each. Examples separately, 3s.

Baker and Bourne's "Shilling" Arithmetic. 4th Edition. 1s. 9d., or with answers, 2s. 3d.

Problem Papers in Arithmetic for Preparatory Schools. By **T. COOPER SMITH, M.A.**, Mathematics Master, St. Peter's Court, Broadstairs. 2nd Edition. 2s. 6d.

[*Bell's Mathematical Series.*

General Editor: Prof. W. P. MILNE, Leeds University.

A "Shilling" Arithmetic. By **J. W. ROBERTSON, M.A., B.Sc.**, Mathematics Master at Robert Gordon's College, Aberdeen, 6th Edition. 1s. 9d.; with answers, 2s. 3d.

[*Bell's Mathematical Series.*

Baker and Bourne's Elementary Algebra. 16th Edition. 5s. 6d., or in two parts: Part I, 3s., or with answers, 3s. 6d. Part II, with or without answers, 3s. 6d. Examples separately, 4s., or in two parts, with or without answers, 2s. 6d.

Baker and Bourne's Shorter Algebra. 5th Edition. 3s. 6d.

Baker and Bourne's First Algebra. 9th Edition. 2s. 6d.

Baker and Bourne's Algebra for Elementary Schools. In three stages. Paper, 1s. each, cloth 1s. 6d. each.

Baker and Bourne's Elementary Geometry. 11th Edition, Revised. 5s. 6d.

Baker and Bourne's New Geometry. 4th Edition. 3s. 6d.

Baker and Bourne's First Geometry. 5th Edition. 2s.

Baker and Bourne's Elementary Mensuration. 3rd Edition. 2s.

Borchardt and Perrott's Geometry for Schools. By **W. G. BORCHARDT, M.A.**, of Cheltenham College, and **Rev. A. D. PERROTT, M.A.** 5s. 6d.

Borchardt and Perrott's New Trigonometry for Schools. 12th Edition. 5s. 6d., or in two parts, 3s. 6d. each.

Borchardt and Perrott's Junior Trigonometry. 4s. 6d.

Borchardt and Perrott's First Numerical Trigonometry. 3s. 6d.

Pendlebury's Elementary Trigonometry. 6th Edition. 5s.

Plane Trigonometry. By **H. L. REED, M.A.**, Assistant Mathematics and Science Master, Westminster School. 2nd Edition. 4s. 6d.

[*Bell's Mathematical Series.*

Numerical Examples in Physics. By **H. SYDNEY JONES, M.A.**, Head Master, Barnstaple Grammar School. 6s.

A First Course in the Calculus. By **Prof. W. P. MILNE, M.A., D.Sc.**, and **G. J. B. WESTCOTT, M.A.**, Head Mathematics Master, Bristol Grammar School. 8s. 6d., or in two parts, 4s. and 5s.

Elementary Dynamics. By **W. M. BAKER, M.A.** 6th edition, revised. 6s.

The Elements of Hydrostatics. By **C. M. JESSOP, M.A.**, Professor of Mathematics, Armstrong College, Newcastle-on-Tyne, and **G. W. CAUNT, M.A.**, Lecturer in Mathematics, Armstrong College. 4s.

Please note current prices.

Messrs. Bell will be happy to send a copy of their latest catalogue of Mathematical publications on application.

DUSTLESS AND HYGIENIC SCHOOLS

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

USE

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

(British owned)

EARLY in the EASTER VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE, and is strongly recommended by Medical and other expert authorities. It costs little, and is easily applied by unskilled.—Not sticky—the ordinary daily dry sweeping alone required—scrubbing being optional.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only during each sweeping (without sprinkling of any kind), but also throughout all the intervening periods—which is even of greater hygienic importance.

"Florigene" has been continuously used for many years on the floors of The Royal Naval Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies. Send for particulars, Medical Reports and Testimonials, to the Sole Manufacturers—

THE "DUST-ALLAYER" CO.

4 Vernon Place, Bloomsbury Square, London, W.C.1.

Contractors to Admiralty, War Office, H.M. Office of Works, India Office, L.O.C., &c.

CAREY'S "GRADUS AD PARNASSUM"

WITH THE ENGLISH MEANINGS

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, Stationers' Hall, London, E.C.4

THE "POSITIVE" ORGAN

IS IDEAL FOR COLLEGES AND SCHOOLS.

It represents the finest value offered in Organ Building, and is a real pipe organ, not an American reed organ.

Over 900 supplied, including many Cathedrals and Colleges all over the world.

Highest testimonials. Send for Catalogue "S."

A MESSAGE TO VIOLIN LOVERS.

We have the finest stock of **New Violins** and many **Old Violins**, and sell them at their actual tone value, regardless of maker, history, and label.

Amateurs and professionals looking for a good-toned, well-made violin, should keep in touch with us until suited. Fine reproductions of famous makers—Stradivarius, Guarnerius, Maggini, Vuillaume, are continually provided by us.

We would welcome your inquiries, and request that our ever-changing lists of **Old Violins** and **Violin Music** may be sent to you periodically.

Name

Address

Please say if interested in a new or old instrument.

New Violin..... Old Violin.....

Approval period arranged with responsible parties.

Old violins bought or taken in exchange.

"The work that is true to its title."

THE WORLD WE LIVE IN

An Illustrated description of the Lands and Seas of the Globe, and their Peoples, Animals, Plants, and Products, compiled to cohere

The Teaching of Geography
and
The Teaching of History.

The TIMES says: "This work is true to its title. It is a vivid presentment of man and his domicile under the most varying conditions."

A Few of the Sections.

INTRODUCTION
HOW GEOGRAPHY AFFECTS HISTORY
THE MAKING of the EARTH
THE EVOLUTION of the OCEANS and CONTINENTS
THE DISTRIBUTION of MINERAL WEALTH
THE DISTRIBUTION of PLANTS
THE DISTRIBUTION of ANIMAL LIFE
THE DISTRIBUTION of MAN
OCEAN CURRENTS and TIDES
CLIMATE and WEATHER
TRADE & TRANSPORTATION
MAPS and MAP READING
THE ORIGIN of LAND FORMS and SCENERY
THE PACIFIC OCEAN and its ISLANDS
AUSTRALASIA AND ITS INHABITANTS
NEW GUINEA AND THE PACIFIC BORDER ISLANDS OF AUSTRALASIA

BLACK'S TRAVEL PICTURES

Selected and Edited by R. J. FINCH, F.R.G.S.

In Special Detachable File Portfolios.
11 x 9 inches.

Each Set contains 48 carefully selected Pictures: 24 in Colour from Water Colours painted on the spot, and 24 in Black and White from photographs.

PRICE **2/6** PER SET.

Explanatory Notes draw attention to the chief features of the pictures, and locate and explain the scenes.

Questions and Exercises on the pictures are provided. These are merely suggestive. Teachers will find in the pictures much more upon which they can base exercises of their own.

A specially drawn Map, on which each scene is definitely and clearly located by a simple device.

Pictures are filed in a Special File, so that each can be detached for examination; and are numbered so that each can instantly be restored to its place.

Reproduction of a Cover.

Sets in the Series.

AFRICA.
AMERICA (Central and South).
AMERICA (North and West Indies).
ASIA.
AUSTRALASIA.
BRITISH EMPIRE.
BRITISH ISLES.
COUNTRIES OF THE GREAT WAR.
EUROPE.
THE MEDITERRANEAN.
LAND FORMS AND CITIES—Sets I and II.

How are we to ensure that our pupils may gain a pictorial idea, say, of the Alps, which is the necessary preliminary to applied and scientific geography? Words are sometimes deceptive; the finest description of a glacier will probably leave a very inadequate impression upon the mind of the child who has never seen one. The greatest assistance therefore that we can obtain must be derived from a liberal use of carefully selected pictures. Three minutes' examination of a good coloured illustration of a glacier, of a tea plantation, of the Colorado canyon, will give a child a far clearer idea than can be obtained from much verbal explanation. Illustrations are no longer to be regarded as something extraneous or optional; they must be carefully chosen and used for a definite purpose by the teacher. Often they should supply the subject-matter of the lesson, and questions and exercises should be based upon them.

To meet this need, Messrs. A. & C. Black have issued their sets of *Travel Pictures*, which are supplied in detachable portfolios. Mr. R. J. Finch, who edits the series, has carefully selected illustrations, both in colour and in black and white, and has appended short notes and questions which will prove invaluable to the teacher of geography. All the chief regions of the world are represented in the series.

BLACKIE & SON'S NEW LIST

BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase List, and Vocabulary. Fcap. 8vo, 1s. net each.

BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo, 7d. each.

A JUNIOR FRENCH COURSE.

FIRST AND SECOND YEARS.

PUBLISHED IN TWO VOLUMES.

By **E. J. A. GROVES,**

Lic. ès L., Senior French Master, Bradford Grammar School.

First Year, 2s. 6d. net.

Second Year, 4s. net.

The need of a practical French Course combining the essentials of the "Direct Method" with sound grammatical teaching has long been felt, and has been lately emphasized by the Reports on the *Teaching of French* issued by the Board of Education and the London County Council respectively. The "Direct Method" alone has been found to leave the pupils ill prepared for precise expression or exact renderings in translation, and generally wanting in an exact knowledge of French. Mr. Groves's *Junior French Course*, now issued, undoubtedly demands the consideration of all Modern Language Teachers, for it will be found to combine all that is useful of the "Direct Method" with systematized grammatical instruction, largely by process of induction.

BLACKIE'S FRENCH PLAIN TEXTS.

Price 4d. each.

The texts in this series are issued without either Notes or Vocabulary, to meet the views of those teachers who prefer to dispense with such aids; and also to allow of their being used for the various purposes for which nothing but a plain text is suitable. Brief introductions are provided.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.,

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and æsthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

The WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. net each.

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.

By **G. TOWNSEND WARNER, M.A.**, sometime Fellow of Jesus College, Cambridge, Master of the Modern Side in Harrow School. 6s. net.

ON THE WRITING OF ENGLISH.

By **GEORGE TOWNSEND WARNER.** Price 3s. 6d. net.

From the Author's Introductory Note.—I have tried to set down briefly the first principles of building up an "Essay"; the way to gather and sort material; then to reveal the commonest pitfalls which lie in wait for the beginner, and to put him on his guard against glaring mistakes.

TILLAGE, TRADE, AND INVENTION.

An Outline of Industrial History.

By **G. TOWNSEND WARNER, M.A.** Crown 8vo, cloth. 2s. 6d. net.

New and Revised Edition.

MAGNETISM AND ELECTRICITY.

Including the Principles of Electrical Measurements.

By **S. S. RICHARDSON, B.Sc., A.R.C.Sc.**, Head of the Physics Department, Central Municipal Technical School, Liverpool. 6s. net.

SCHOOL EXAMINATIONS IN ENGLISH.

By a UNIVERSITY EXAMINER IN ENGLISH.

EXAMINATIONS in languages differ from those in other subjects in that they are designed to test both an art and a science; both the power to use the language and a knowledge of the laws by which it is governed. When to the tests of composition and grammar there is added the further test of a knowledge of, and appreciation of, literature, the examination becomes a very complex matter, requiring high qualities of discernment and intuition in those who conduct it. In subjects such as history or geography the examiner is concerned only to find out what the candidate knows about his subject; in an examination in English he must always have in view both the manner and the matter of the answer.

If a command of written expression were the only thing to be considered in an examination in English, it would seem that an essay of some length would by itself be a sufficient test, and some reformers have urged that the examination should be confined to this. But there are many serious objections to such a plan. Every experienced examiner knows how difficult it is to set subjects which are equally acceptable to a thousand or more candidates; even when many topics distributed over the fields of art, literature, history, science, and contemporary events are given, there will always be some boys and girls who are hampered by the fact that none of those suggested are congenial to them. They could, perhaps, write fluently and well on something else, but they do not get the chance to show what they can do. To avoid this difficulty it has been suggested that candidates should be allowed to write on any subject that interests them; but in this case it would be impossible to guard against the prepared essay. Some determined pupils might even learn by heart the five hundred words which compose the average essay in a school examination.

In addition to the impossibility of setting subjects that are suitable to all candidates alike, there is the further complication, noticed in the recent report of the Secondary Schools Examination Council, that examiners differ very greatly in their literary standards. As appointments are made at present, an examinership may be given to a man whose acquirements, though distinguished, are rather linguistic than æsthetic, and who may himself find some difficulty in writing graceful English. Strictly speaking, such an examiner should deal solely with questions on grammar or phonetics, leaving the rest of the paper to his more literary colleagues; but I have never known an examination in which this was done. Yet to judge an essay fairly the examiner must himself be very sensitive to style, and be able to detect its beginnings even in an essay by a boy of sixteen.

Again, in judging an essay it is very difficult for an examiner to keep subject-matter and expression distinct. A well informed essay, even when it is marred by faults of style, is likely to be marked high, though why a boy should gain good marks in English because he takes an interest in, let us say, aviation, it is hard to tell. Often, to the despair of the examiner, wealth of information and command of expression are in inverse proportion, and an essay which would obtain sixty marks out of a hundred for its subject-matter falls into the large and mediocre class of the forties because the writer has made some bad mistakes in syntax, or is an inaccurate speller.

Further, in considering the essay, one must have regard to the physical and mental strain imposed upon the examiner. When he is examining answers on matters of fact, where the candidate must be either right or wrong, he is able to mark very quickly; but in English there is constant need for suspense of judgment and the revision of first impressions. And examiners nearly always have to work at high speed; to complete their task in the time allowed they must generally mark from forty to fifty scripts a day, on a very moderate estimation. A little calculation will show that, if they give only ten minutes to each script read, they have to work seven or eight hours a day at a task in which any lapse of attention would have disastrous results. In fact, as a parenthesis, I may insist here that the hard case of the examiner of the English essay is seldom sufficiently considered. It is impossible for him to work as fast as the examiner in subjects where mere matters of fact are concerned, and to do full justice to the candidates. He must take more time to reflect, and is often obliged to glance over an essay a second time, in order to decide what is to be deducted for grammatical faults or bad arrangement, and what is to be added for clearness, grace of expression, or general power.

Bearing in mind all these considerations, it seems evident that to make an essay the only test of proficiency in English, or even to make a pass in the essay paper compulsory for satisfying the examiners in the whole subject, would be very unfair, and that this exercise must be supplemented by others. Of recent years these other exercises in most school examinations have resolved themselves into four or five, among which a choice is allowed. The most prominent among them is a *précis*, and if the passage set be well chosen this is a most valuable test, for it tries not only the candidate's power of interpretation, but also his ability to reproduce the substance of what he has read; it is, in fact, a test of the ability to read intelligently and to seize the salient points in an argument or narrative. But it is often rendered unnecessarily difficult by want of discrimination on the examiner's part when choosing the passage. At this stage a passage for *précis* should deal with matters of fact; it should not be allusive or contain many unusual words, and it should be very diffuse. The passage, in fact, should be easily intelligible and not too long; the style should be good and the subject-matter attractive. Considering the large number of passages fulfilling these conditions that may be found in our literature, it is strange that those set for *précis* in examinations should so often be uncouth and uninteresting.

Another very usual exercise is analysis, which is generally

distinctly mentioned in the schedules of examining bodies, and is therefore necessarily included by the examiner, though it is doubtful whether it should carry many marks or play a very important part in the balance of a paper. Examiners are too apt to set a somewhat involved passage for analysis into sentences and clauses, and there is a certain type of candidate, who, though possessing a very poor command of English, can do this to perfection. I have known candidates who have done poorly in every other part of a paper to have obtained a pass by virtue of correct analysis. This is unfortunate, for though analysis is a very useful test to apply to a faulty sentence when one wants to convince the writer of his error, great skill in working it may be acquired by constant practice without ever applying it to one's own composition. It is, indeed, often done best by pupils possessing a logical but unimaginative and unconstructive type of mind, so that, though it is a very convenient exercise in school, it is not a very satisfactory way of finding out whether the candidate has a good command of English.

Formal grammar is debarred from most school examinations, and therefore such questions as "Give three examples of the subjunctive mood," which I saw in an examination paper as recently as last year, are happily not often found. Parsing is also generally ruled out, but questions on the functions of words and phrases, and those involving the power of seeing and giving reasons why a sentence is ungrammatical or dubious in meaning, may be included. Many teachers demur to the practice of setting faulty sentences for correction on the ground that it familiarizes pupils with errors that they would never think of making, but this is not, in my opinion, a valid objection. Unfortunately, we are all confronted every day in newspapers and novels with sentences whose syntax has gone hopelessly astray, and to be able to detect their faults is surely a proof of our own more correct usage. But the candidate must always be required to give reasons for his correction, for it is the reasons that count, otherwise the mere facts of having a good ear or of having been used to the speech of educated people would enable him to condemn the solecism without proving his knowledge of the laws it violates.

Two or three other exercises, generally on the meaning of words and their appropriate uses, complete the paper in English language, and it is often through the answers to these that the examiner gains the truest estimate of the general culture of the candidate. For these answers cannot be prepared for, since their range is impossible to determine, and successful answers depend chiefly on the amount of reading done by the pupil, though to some extent also on the education of those with whom he is accustomed to associate.

But for a pass in English most examining bodies require not only a knowledge of language, but also some acquaintance with literature, and the question of what should be expected in this branch is very perplexing. Some authorities mention thirty or forty works, and offer a wide range of questions, of which only four or five are to be answered by the individual candidate; others ask for a knowledge of only two or three texts, and require more detailed answers; some few demand a general knowledge of English literature since the sixteenth century; and in some cases the schools themselves are invited to frame their own syllabuses. The last plan seems to approach the ideal, for the more liberty that is allowed to the teacher the better his work will be; but in practice it presents many difficulties. In the first place, it is almost impossible to obtain equality of standard in the various syllabuses submitted; some will be very long, others much too short; one school will offer three texts, another twenty or more. And as it is not practicable to print a separate paper for each of a hundred or more schools, the questions applying to the three texts and the twenty must be combined in one of a dozen or more papers. The task of classifying all the syllabuses and distributing the questions often takes several days, and when the examiner has done his best to satisfy all claims, he is sometimes reproached by certain schools, which (long before the results are published) assume that their pupils have done badly, for not having treated them fairly. Moreover, when so great a variety of

texts, sometimes over two hundred, come under survey, there are sure to be many which occur only because they are special favourites with certain teachers, and are not likely to be familiarly known even to the best-read examiner. Much refreshment of memory is therefore necessary on his part, and if he has assistants, they also must read several books carefully through before beginning their work. It may be argued that any examiner in literature should be able to give an accurate description of the plot or characters of any English novel or play, and a summary of any essay or poem in our literature. As a matter of fact, this would require a prodigious memory, and I have known of assistant examiners working in the country who have been held up in their work because the necessary means of reviving their knowledge was not at hand.

Such are some of the difficulties in carrying out the ideal scheme; and I am inclined also to agree with the report of the Secondary Schools Examination Council, which finds it a mistake to set questions on general literature at the stage of the first school examination. It is obviously impossible for a pupil of sixteen or seventeen years of age to have read more than a few of the greatest works in English literature, and those will have been chosen with regard to his mental development. But the examiner, unless he has been himself a teacher of boys, will feel free to ask for the subject-matter of, say, "Absalom and Achitophel," or for the plot of "Volpone." After a few years' experience, finding that such questions are barren of results, he will, perhaps, take refuge in vague requests to the candidate to sketch the plot of any historical novel, and be shocked and disappointed to find that a considerable number of pupils relate the story of "The Scarlet Pimpernel." Worse still, he may suspect some imaginative candidate of having invented both a title and a plot, and how to verify the existence of such a work in the hurry and rush of getting out results by the appointed time is a problem.

Yet the old custom of requiring a very intimate and detailed knowledge of one play by Shakespeare and of one prose text seems also to have been mistaken. It limited the reading of pupils at an age when they should be encouraged to read widely, and it led teachers to concentrate on unimportant points of derivation or of literary allusion, while both were bored to death over the texts thus studied. Perhaps it was because the method was wrong, and a more enlightened mode of study would have revealed new beauties in the books and succeeded in fascinating the pupils; but those of us who can remember how the noblest plays of Shakespeare palled on us after much concentration on "handsaw," "blanket of the dark," and the "eyrie of little eyases" will not be anxious to continue the plan of studying one or two texts very minutely with pupils of this age.

On the whole the plan of prescribing thirty or forty texts for study, and allowing a wide choice of questions on these texts, seems the best. Such a list will probably include several plays by Shakespeare, the easier essays of Bacon, Temple, Cowley, Addison, Steele, Goldsmith, Johnson, Lamb, Hazlitt, Macaulay, Ruskin, Carlyle, and Stevenson, novels by standard authors carefully selected for their style and other literary qualities, and an anthology of poetry, such as "The Golden Treasury," from which particular poems would be selected.

The syllabus settled, the still more troublesome problem of examining on it still lies before us. From many years' experience of school examinations, I have come to the conclusion that the questions must be directed almost entirely to the subject-matter of the books read, for it is unreasonable to expect any power of critical judgment at this age. It is true that questions involving such power are often set, and do elicit some kind of answer; but these answers are plainly not original, and may generally be traced to notes dictated by the teacher or to editorial matter in the textbook. Sometimes they do not even show any first-hand knowledge of the text criticized; the commentary, and not the subject-matter, having absorbed all the attention. If, however, one could guard against the teacher cramming the pupils with ready-made criticism, it might be possible to elicit some genuine opinions

from them, for boys and girls are not generally backward in expressing their views about the books they have read. But, after a year's study, they are hopelessly biased by the dicta of those in authority, and it is impossible to obtain from them an unsophisticated reply.

But, if questions at this stage must not involve matters of critical judgment, they may yet be framed so as to find out whether the candidate has been trained to observe points about the style and technique of a writer. Such a question as "Illustrate by quotations the poetic methods of Tennyson," would probably merely elicit a string of quotations, apt or unapt, from any of his poems that happened to be remembered; but if the question were framed differently, e.g. "Quote passages from Tennyson's verse to illustrate his use of alliteration, or simile, or metaphor, or onomatopoeia," pupils who had been properly taught would be quite equal to it. Those whose attention has been directed to such matters are also generally able to point out the salient characteristics of any well marked style.

Other questions, not directly on the text, but on matters arising from it, are also legitimate. Thus we may ask what may be learned from Shakespeare's plays about the amusements of his time, or the life of the common people, or the conditions of the Elizabethan stage. I must confess that in my own experience I have found that such questions attract only the best pupils, but they ought not to be beyond the average candidate. Unfortunately, teachers who expect such questions will sometimes revert to the abominable practice of dictating notes upon them, cramming the pupils with ready-made answers instead of affording them the pleasure of discovering the necessary information by an independent search through the play. The examiner is not always to blame for bad methods of teaching English.

And because "cramming" is still far too common, the texts set for examination should be frequently changed. Some authorities retain the same syllabus for four or five years, to the great weariness of the teacher and the embarrassment of the examiner, who is forced either to repeat his questions in a different form or to direct them to the less important parts of the text. Frequent change is especially important when such comparatively short poems as "Sohrab and Rustum," which figured in one examination syllabus for five years, are set.

These are some of the reflections that occur to me after twenty years' work as an examiner, and, if I have insisted on the difficulties that confront the examiner rather than on those that perplex teachers and pupils, it is because the case of the examiner is hardly ever considered. He sits shrouded in mystery, presumably impervious to the arrows of criticism, for if he minded them how could he continue his occupation? Yet he is generally a well-meaning, sympathetic person, rejoicing in good answers and depressed by bad ones, conscious always of the individual behind the written answer and anxious to do justice to everyone. And, as examiners are drawn more and more from the ranks of those who have had practical experience as teachers, and realize more exactly the capacity and limitations of sixteen years, the questions set will probably be increasingly sensible and appropriate. After all, has there not been a great improvement in methods of examination during the last ten years?

THE EDUCATIONAL SIGNIFICANCE OF THE FIST.

By F. B. KIRKMAN.

THE value of group games, like football and cricket, is fully recognized in our schools. We do not tire of extolling their merits as means of developing the spirit of co-operation, as a training in capacity to subordinate self-interest to the common interest. What the school authorities, with notable exceptions, do not so fully recognize in the organization of school games is the value of those which foster

the capacity to act alone. There is a tendency to overlook the fact that in the daily affairs of life there are many occasions on which the individual is called upon not to co-operate but simply to hold his own, without support, in the face of disapproval or opposition, whether public or private. On such occasions the first essential, in order that he may act as he thinks right or not yield to injustice, is that he should possess sufficient moral courage to face menace and hostility. What many frequently yield to is not superior force, but their own shrinking before any show of force. This lack of courage has its origin to a large extent, no doubt, in inherited disposition, but it is also largely due to a habit of mind contracted and fixed in childhood or youth. It is precisely here that the educational value of the fist comes in.

In school life, as everyone knows, the fist is the final argument. The self-confident boy is well aware that a mere threat to bring the fist into action is enough to secure his ends. The timid boy who yields to this threat tends to contract the habit of yielding to any show of force even though actual fear of a blow may not be present in his consciousness. Every boy, and the timid boy in particular, should be trained not to fear a blow. He should come to see that the immediate, physical sting matters nothing compared to the loss of self-esteem or the injustice that he may suffer. He should be taught to take and give blows; he should be taught to box as he is taught to play cricket and football. Boxing on the one hand, football and cricket on the other, are, indeed, complementary. The latter are exercises in mutual aid, the former in self-reliance. The latter teach capacity to act with one's own fellows, the former to act by oneself. Is the one less important than the other?

It is probable that there are timid personalities that can never overcome their constitutional lack of self-confidence when in conflict with other personalities. They are doomed to play the part of the proverbial anvil. Such cases apart, there can, however, be little doubt that self-confidence is developed by boxing. Interesting evidence of this is supplied by an article published some time ago in a leading American educational journal, the *Pedagogical Seminary*. It describes how definite instruction in boxing, with gloves on and without brutality, was given in a certain school, and the effects watched. It was reported that its tendency to strengthen character was clearly apparent. Certain timid boys developed self-confidence; and certain boys, inclined to be "bullyish," were reduced to a more modest appreciation of themselves by judiciously chosen opponents. Generally, a wholesome respect for what the other fellow could do was engendered, together with increased capacity to stick up for oneself—an effect which shows that boxing, properly organized, should decrease, not increase, the appeal to brute force in school life. It should do so, for the simple reason that the menace of the fist ceases to alarm those accustomed to meet its blows. The case is one of familiarity breeding contempt.

In conclusion, an obvious comment must be met. It is that boxing is not the only game of its class. Why not fencing or single-stick? The reply is that the boy does not normally carry a foil or a single-stick, and therefore that proficiency in their use is not going to be of as great moral value to him in his dealings with his fellows as proficiency in the use of his fists, which accompany him everywhere, in *posse*, if not in *esse*.

UNIVERSITIES AND SCHOOLS.

OXFORD.

Oxford has accepted the inevitable. In a house of 793—one of the largest, we suppose, of the many historic assemblies that have gathered in the Sheldonian Theatre—the statute amending Responsions was carried by a majority of seventy-five. The controversy had been reduced by much negotiation to a very narrow issue. The Greek party had agreed that candidates for degrees in mathematics, science, and law, as well as Passmen, should be exempted from Greek; nobody proposes to touch the schools of Literae Humaniores and Theology; the whole question, therefore, was

whether students of history, modern languages, and English should be relieved. Two facts dominated the situation: the first is that the refusal of the ancient universities to admit Greekless boys has not arrested the decline of Greek in the schools, as shown by the proportion of candidates taking that language in the Joint Board Examination—83 per cent. in 1883 and 39 per cent. in 1913; the other is that real Greek is not required for Responsions, but a bastard subject known as "Responsions Greek," and that the advocates of compulsion will have nothing to say to real Greek. This was explained with ruthless clearness by the Rector of Exeter. His speech was a powerful plea in support of the statute made by one of the foremost Hellenists in the University. The arguments on the other side seemed thinner and more unsubstantial than ever. Mr. Livingstone contended that Greek was essential to the study of the modern humanities; the presence in the list of supporters of the names of many eminent representatives of those subjects is a sufficient answer to his plea. Of the concession made to the Greek party—namely, the provision that candidates for the modern schools should offer in place of a Greek book a portion of Greek history and literature, together with Greek texts studied in translations—little was heard during the debate, and it is difficult to say whether either party regarded it as of any solid value. Amongst head masters, Canon David, of Rugby, supported the reform, and Mr. Carter, of Bedford Grammar School, opposed it; it is commonly supposed that the latter represented himself and one other head master. Probably, indeed, the majority of seventy-five would have been considerably larger if schoolmasters had the same opportunities for attending meetings at a distance from their work as have clergymen.

MANCHESTER.

Manchester is appealing for funds to build and equip lecture and demonstration rooms which shall be attached to its Museum. It is intended, *inter alia*, that these rooms shall be placed at the disposal of educational institutions, such as the Workers' Educational Association and other similar societies, and of schools, so that these may not only be able to send parties and classes of students to the Museum, but be in a position to give lectures upon what the students have observed, on the spot, apparently also with the possibility of the placing of the objects under consideration before the students themselves for closer inspection. This appears to be a new and interesting departure deserving of full support from all interested in education.

LEEDS.

In memory of the late Sir Swire Smith and of his lifelong labours for the improvement of national education, a number of his friends in Keighley and district have raised the sum of £2,800 for the endowment of a Sir Swire Smith Fellowship at Leeds University. This gift has been gratefully accepted by the Council. The Fellowship will be awarded to graduates, in any Faculty of the University, who have given evidence of qualification for undertaking advanced work. It will be tenable for two years, and will enable a succession of promising young men and women to take advantage of opportunities for higher study and training.

WALES.

The Departmental Committee met at South Kensington on March 4 and 5, to hear evidence on the need of aiding the provision of secondary schools for adults, from Principal T. Rees (of Bangor Independent College), the Rev. D. J. Jones (head master of Ystrad Meurig Grammar School), the Rev. R. J. Rees (Aberystwyth), and Prof. D. M. Lewis (of Aberystwyth). On March 12 representatives of the Welsh County Schools Association were examined by the Committee which is inquiring into the problem of free places and scholarships. The former committee is now nearing the end of its labours, and it is therefore probable that it will be able to present its report on the future organization of secondary education within the next few months. Its conclusions are eagerly awaited in Welsh educational circles, but, so far, there have been no indications as to their character.

The newly-appointed principal of the College, Dr. R. F. Sibly, met several representatives of the Higher Education Committee of Swansea, when he delivered an instructive address on the future possibilities of the University College. Dr.

Sibly recognized to the full the excellent opportunity which is presented before an institution which is so favourably situated in relation to industry and commerce, and, therefore, he is confident that in a few years the metallurgical school, at all events, will develop into one of the most important schools in the country.

Swansea
Technical
College.

With so many facilities easily available in the town and in the immediate neighbourhood, it only needs courage and faith to make the new University College one of the most progressive and best equipped institutions. It was also refreshing to hear the principal's views on the importance of giving due prominence, not only to the humanistic studies, but also to the foundation of properly organized courses of extra-mural lectures. The difficulties which remain to be overcome before the College is placed on a proper basis are great, but it is abundantly clear that the authorities take a wide and liberal view of their responsibilities, which is a good omen for its future success.

The ridiculous strike at Tonna, near Neath, over a recent appointment by the Glamorgan Education Committee to the head mastership of the primary school in the village, has ignominiously collapsed. The local leaders of the strike objected to the replacement of the temporary head master by a stranger, and failing a reversal of the Committee's decision they decided to advise the parents to withdraw all their children from the school. It was, of course, an unjustifiable interference with the powers of the Education Committee, and if the revolt had succeeded it might have created awkward precedents, but happily common sense prevailed in the end. The result is probably due partly to the action of the retiring teacher in advising the parents to accept the Committee's decision. There was a similar outburst of local feeling near Ystalyfera in the same county.

The Tonna Strike.

Mr. Gwilym Peredur Jones has just been elected to a fellowship in Welsh in the University of Liverpool. This appointment is interesting because it is the first appointment to a new fellowship founded by Lord Howard de Walden for the purpose of investigating ancient Welsh genealogies. This is practically a virgin field of study, though the late Capt. Vaughan ("Owen Rhoscomyl") had assiduously transcribed a great mass of these genealogies from old manuscripts. Mr. Jones is specially qualified for this work, as he has been carrying on research work in medieval Welsh history for some time.

A Welsh Fellowship at Liverpool.

The Denbighshire Education Committee has appointed two women organizers and instructors in physical training—Miss Kelly (of Johnstown, Wrexham) and Miss Batty (of Southport). The Merthyr Education Committee has appointed Dr. Mary E. E. Phillips as a woman assistant medical officer, and Aberdare has elected Dr. E. C. Davies to a similar post.

Appointments.

We regret to hear that Mr. Owen Owen, formerly Chief Inspector of the Central Welsh Board, has died at Colwyn Bay, in his sixty-ninth year.

Mr. Owen Owen.

He had been in ill health for several years, and it was only his indomitable courage that had enabled him to perform his arduous duties during the last few years of his tenure of his office. He was appointed as the first Chief Inspector of the Central Welsh Board in 1897, and he retired in 1915. He was therefore largely responsible for all the foundation work in connexion with our system of intermediate education, on which he has left his impress permanently. In the early stages in the history of the intermediate schools, the school examination occupied a far more prominent place than it does at present; its organization was exceedingly complex and minute and a severe test of the organizing powers of the Chief Inspector, and it is a great tribute to Mr. Owen's genius for detail and to his clear-headedness that the examination machinery worked smoothly and easily throughout. As the schools developed, and examinations tended to occupy a more subordinate position in public esteem, Mr. Owen was among the first to recognize the desirability of reducing the strain upon the schools, and the examinations were modified. Mr. Owen's relations with the schools were most cordial. His inspectorial visits were characterized by tact and sympathy, and he acted on the principle that it is an inspector's main duty to give encouragement and guidance rather than to criticize. We have no doubt that, when the history of the "revival of learning" in Wales is written, the name of Mr. Owen Owen will be given a prominent place on the list of those who have made higher education what it is in Wales at the present day.

SCOTLAND.

The annual meeting of the Trust was held last month. The report submitted by Lord Balfour of Burleigh, on behalf of the Committee, was mainly a record of the financial position. The income of the Trust, which amounted to £125,000, has increased some 25 per cent. In view of the depreciation of money, the value of scholarships has been raised from £100 to

The Carnegie Trust for the Universities.

£150, and of fellowships from £150 to sums ranging from £200 to £250. Thanks to the surplus of revenue in the hands of the trustees it was possible to double the annual grants made to the universities and to certain other institutions, £72,000 being paid to the former and about £8,000 to the latter. The expenditure for the year in payment of class fees has been the highest on record. As compared with the sum of £29,353, paid on behalf of 2,244 beneficiaries for 1917-18, the expenditure was £51,649 on behalf of 3,793 beneficiaries. The Committee note that, while it has been possible to meet this heavy demand for 1918-19 without resort to any unusual expedient, the sums called for on account of class fees up to November 1919, mainly on account of the return of Service men and by the increased proportion of beneficiaries in the Faculties of Science and Medicine, threaten a considerable excess of expenditure over income for the coming year. In view of this, it is intimated that future beneficiaries will probably have to be content with a reduced scale of allowances. Regret is expressed at the resignation of Sir William McCormick from the secretaryship of the Trust. Sir William has been secretary since its foundation in 1901 and has played a notable part in shaping its policy. His appointment as chairman of the committee under the Treasury to inquire into the financial needs of university education in the United Kingdom is a loss to the Trust but an undoubted gain to the universities.

University Vacation Courses for Teachers.

The semi-official announcement that Edinburgh University, acting in co-operation with Edinburgh Provincial Committee, was arranging for courses of instruction on a university level which would entitle the teachers attending them to a qualification that would raise them on the authorities' salary scales, gave very general satisfaction. There was corresponding disappointment when it was rumoured abroad that the Education Department had refused to recognize the scheme; and the Institute Council, evidently assuming that the difficulty was mainly financial, undertook to finance the classes in the meantime to the extent of £1,000. Whether this action of the Council has led the Department to sink from its position, or whether the Edinburgh people are going on with their courses in faith, is not yet clear. But, at any rate, they are going on. The courses, as advertised, fall into two groups, corresponding presumably to the ordinary and higher ordinary degree standards, and the subjects to be taken are English, Latin, French, geography, history, chemistry, physics, and economics. The courses are to be arranged by a board of seven members, four of whom are to be drawn from the Provincial Committee and three from the University. In terms of the agreement come to between the Edinburgh University authorities and those of the other Scottish universities, the professors and lecturers are to be selected from the staffs of all the universities. The classes are likely to be successful under any conditions. But if non-graduate teachers get the guarantee that through the classes they will have a proper opportunity to prove their qualities, and that the work they do will meet recognition in the application of the salary scales, their success may well turn out embarrassingly great. Non-graduates have resented the differentiation between themselves and their graduate fellows so deeply that they will spare no effort to right their status.

Financial Help for Teachers in Training.

In a recent circular addressed by the Education Department to the education authorities, attention is called to the fact that, in accordance with the financial scheme of the Act of 1918, students in training must now look to the authorities and not to the provincial committees for maintenance allowances and other grants in aid. "Just as those in training for other professions have to do," says the Department. If that were really true, the change would be heartily welcomed by teachers, who have always regarded the subsidies to students as a mean device for attracting people into a badly paid profession. Unhappily it is not true. "The demands of the schools, including the denominational schools transferred under Section 18 of the Act," the Circular goes on, "are such as make it imperative that every endeavour should be used to encourage suitable candidates to come forward. Should it be found necessary to give more generous treatment to intending teachers than to those preparing for other professions, it would not be unreasonable to attach to the award some stipulation as to a definite period of subsequent service within the authority's own area." This is doubly objectionable. It perpetuates the old system of doles, and it encourages the homing tendency of teachers which enabled so many of the old school boards to pay wretched salaries to home-bred teachers. The sooner the Department and the authorities realize that the only way to get a sufficient supply of the right kind of teachers is to give a reasonable salary and to remove humiliating conditions of service, the sooner the solution of the big problem of staffing the

schools will be reached. The Circular is a move backwards and is unworthy of the Department.

The Council of the Educational Institute, not content with a mere protest against the exclusion of teachers in colleges from the representation of the profession on the provincial committees, decided that the names of those members of the training college staffs who had been nominated before the change in the Department's minute should be retained on the ballot papers to be submitted to the four secondary districts. The intention presumably was to make the Department realize that the teachers wanted to have among their representatives on the committees, not only teachers in schools, but also training college lecturers enjoying the confidence of the profession. This course of action was open to the objection that college lecturers, if elected, would be disqualified by the Department, and the election results to some extent confused. There was the further possibility that, if it were generally known that these particular candidates were likely to be disqualified, teachers would hesitate to vote for them, and the protest would become a fiasco. As it has turned out, the teachers have shown their minds on the matter decisively by giving the training college nominees a large support. Out of fourteen candidates in the west of Scotland, for example, two of the four elected are on the staff of the Provincial Committee. The Education Department would be well advised to take note of this result. It shows plainly that the profession is anxious to get as its representatives on the committees those whose position gives them an intimate knowledge of the actual work of training teachers. Even if it is compelled to disqualify people like this in consequence of the minute now approved, it might well introduce a modifying minute before the time comes for another election.

The endowed schools outside the jurisdiction of the education authorities have been hard hit by the operation of the national minimum scales. Unlike the schools under public management, they cannot look to the rates when salaries have to be raised, as they need must be if they are to retain their teachers; and the grants they draw from the Treasury are almost as inelastic as the revenue from their invested funds. One after another they have been showing signals of distress. Dollar Academy, Gordon's College, Aberdeen, the Edinburgh Merchant Company's Schools, and, most recently, Hutchison's Schools in Glasgow, are all in the same plight. In view of the dangers of an over-uniform system of higher education, it would be a thousand pities if these schools were to be compelled to merge their special characters in the general system. Their efficiency is as unquestioned as their distinctiveness, and the country stands to lose if they are forced under the authorities by their poverty. The immediate way of escape, which is that already taken in Aberdeen and Edinburgh and likely to be generally taken, is by means of a substantial subsidy from the authorities, but the authorities are decidedly chary about adding to their financial commitments, more especially when it means disbursing money to bodies of independent governors, and there will probably be a difficulty in making the arrangement permanent. The more satisfactory method would be the increase of national grants to these schools. The Treasury has been compelled to come to the aid of the universities and central institutions already. By the same logic it might be expected to come to the aid of the endowed schools. The main thing, however, is to get something done to tide over the next few years, till the nation realizes the need for a substantial addition to the Education (Scotland) Fund, and Scotland's eleven-eighths of the grants either becomes sufficient for her needs or is made sufficient by proper supplement.

Aberdeen University is first in the field with its intimation of new honorary graduates. The list of Doctors of Law to be conferred at the spring graduation is in every way worthy. It is headed by the eminent name of Sir Jagadis Chandra Bose, of Calcutta, and it includes besides Mr. Charles Manray, the author of "Hame-with" and other poems of more than Aberdonian fame, and Mr. McPherson, the able rector of Banff Academy. Teachers, while appreciating the honour done to one of their number, cannot help wondering why such honours come so rarely to members of their profession. The universities, indeed, have always been rather grudging in their recognition of distinguished teachers in spite of their dependence on the schools. One of the most outstanding of education professors was known and admired over Britain and America for many years before it occurred to a Scottish university to confer on him the LL.D.; and there are men at the head of the great city schools all over Scotland whose public services are notable, not only in the domain of school but in public life as well, whose merits would long ago have been approved by an

honorary degree if they had belonged to any other profession. The hope may be expressed that the honour done to Mr. McPherson may be the precursor of similar honours to other teachers no less worthy.

At the last meeting of the Council of the Educational Institute, the convener of the Committee on Educational Research gave an account of the tests which had been prepared by his committee for pupils at the qualifying stage. So far, there are only two sets of tests—one in composition, and a series in arithmetic. In an article which appears in the *Educational Journal*, it is explained that the committee intends to prepare a composition scale by reference to which teachers may be able to estimate the value of the work of their own classes. It is pointed out that compositions at the end of the primary course are either descriptive or imaginative, and appeal is made to teachers of qualifying classes to set their classes to write on one of three prescribed subjects, of the descriptive kind, under certain conditions duly detailed. It will be interesting to see what success the committee achieves in its efforts to fix standards for Scottish schools. Apart from the fact that there is probably a great diversity in the performances of the pupils in different districts, the qualities that go to make up a good composition, other than the merely mechanical, are so varied and elusive that there is doubt about the possibility of devising a scale that will be of practical value. In some ways the problem that is met in arithmetic is a much easier one. Tests like the American Courtis tests have already demonstrated the feasibility of measuring ability in that subject. The Institute's tests in arithmetic, however, though reported well under way, have not yet been published, and comment must be deferred till they appear. The work of the Research Committee is excellent in every respect. It has excited a lively interest, and even if it should ultimately disappoint expectations somewhat, as work of this kind on a limited scale is apt to do, it has done much to make teachers realize the necessity for a scientific groundwork for their professional activities.

IRELAND.

The Irish Education Bill has again been introduced into Parliament. The measure is to all intents and purposes identical with the Bill that was introduced and passed its first reading last autumn. There are a few verbal alterations, which are merely matters of drafting, and there is one change intended to bring it into line with the new Government of Ireland Bill, which has also been introduced this session. Clause 24 (1), dealing with finance, opens thus: "Subject and without prejudice to the provisions of any Act passed in the present session of Parliament to amend the provision for the Government of Ireland, there shall be paid to the Education (Ireland) Fund," &c. The Education Bill, though introduced, is making little headway in Parliament. The Home Rule Bill is to have a second reading before Easter, but not the Education Bill. This is a serious matter for Irish teachers. The great reforms of education contained in the Bill, although urgent, may be postponed for a few months without great harm, but what is to become of Clause 24 (2) which promises payment to Irish education of equivalent sums for the financial year commencing April 1, 1919, and ending March 31, 1920? The Chief Secretary, in reply to requests that something should be done for Irish teachers during the current financial year, said that the passing of the Bill would remedy their grievances, and he pointed to this clause as his proof. But did not this imply that he would do his best to have the Bill passed into law before the end of the financial year? It may be said that if the Bill is passed this retrospective payment will still be made, but this is most unsatisfactory for teachers, especially in secondary schools, who see large increases of salary benignly made in many trades and professions with Government approval, while they are put off again and again with promises which may never be fulfilled.

For what are the prospects of the Bill? In the first place it is being mixed up with the Home Rule Bill. If this passes then Ireland will be divided and the two sections will wish to provide for education each on its own lines. The cry will then at once be raised that the reform of education had better be left to the two different sections. They have different views of education and, it will be said, it will be absurd to pass a Bill which each of them will want to alter more or less radically. There will certainly be a strong impulse towards leaving things alone. On the other hand, Mr. Bonar Law said, in the House of Commons, that education reform was urgent in Ireland, and it would take time for the new Irish Parliaments, if established, to deal with the question. This is an argument which is likely to carry little weight, once

Mathematical Papers for Admission into the Royal Military Academy and the Royal Military College, and Papers in Elementary Engineering for Naval Cadetships, for the years 1910-1919. Edited by R. W. MILNE, M.A. 10s. 6d.

SIXTH EDITION ENLARGED.

Alcohol and the Human Body. An introduction to the Study of the Subject, and a Contribution to National Health. By Sir VICTOR HORSLEY, C.B., F.R.S., and MARY D. STURGE, M.D. With a Chapter by Sir ARTHUR NEWSHOLME, C.B., M.D., and a Chapter written in collaboration with Sir LEONARD ROGERS, C.I.E., and a Chapter written in collaboration with C. W. SALEEBY, M.D., F.Z.S. Illustrated. 8s. net.

A Classbook of Organic Chemistry. By J. B. COHEN, Ph.D., B.Sc., F.R.S., Professor of Organic Chemistry, The University, Leeds. Vol. I.—For First Year Medical Students and Senior Science Students in Schools. 4s. 6d. Vol. II.—For Second Year Medical Students and others. 4s. 6d.

Education.—"We can cordially recommend this little book, not only to medical students, but also to other chemical students (and advanced students of domestic science) desirous of acquainting themselves with the most important recent advances in those sections of 'bio-chemistry' discussed in the book."

Cytology. With special reference to the Metazoan Nucleus. By W. E. AGAR, D.Sc., Professor of Zoology in the University of Melbourne. Illustrated. 12s. net.

Thoughts on the Union between England & Scotland. By ALBERT V. DICEY, K.C., Hon. D.C.L., and ROBERT S. RAIT, C.B.E., Professor of Scottish History and Literature in the University of Glasgow. 8vo. 16s. net.

The Progress to Reading. An entirely new method of teaching Reading partly phonic and partly designed on lines of interest. Edited by RICHARD WILSON, D.Litt. With coloured and other Illustrations.

THIS SERIES CONSISTS OF

Conversational Pictures. Twelve large Nursery Tale Pictures reproduced in full colour. Single Pictures, cloth rollers and varnished, 5s.; unmounted, 3s. Set I, pictures numbered 1 to 6, and Set II, pictures numbered 7 to 12, mounted on linen and attached to wooden roller, per set 25s.

The Picture Book, 10d. — The First Primer, 1s. — The Second Primer, 1s. 3d. — The Infant Reader, 1s. 6d. — The Preparatory Reader, 1s. 6d.

Teacher's Handbooks, Parts I-Y. 1s. 6d. each. Complete 6s.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

the Home Rule Bill is passed; for then the House of Commons will not care to spend time over another contentious Irish Bill. This brings us to the second point. The Bill is undoubtedly being faced with strong opposition from the Roman Catholic Hierarchy. They do not intend that it shall pass if they can prevent it. Educationally, their arguments amount to little. They do not discuss the measure or point out in what respects it should be altered to meet their views. They appear to see in it a measure that threatens the religious basis of education in their schools, and this is sufficient for them. A large number of teachers do not see this. They point out that the present managerial system under which religious teaching is secured to the different religious denominations is not interfered with by the Bill, which also provides that the present religious balance of representatives on the new advisory boards shall be maintained. But these arguments carry no weight with the Roman Catholic bishops. The present state of affairs is that Protestants and teachers generally are supporting the Bill or are anxious for it to pass with amendments, but that the Roman Catholic Church are entirely against it. In the meantime the position of teachers and schools is serious. The latter are without means to increase teachers' salaries to meet the constant rise in prices, while the former see that their claims for improved conditions have been admitted by Vice-Regal Commissions and by the Government itself, and yet the settlement of this question is constantly being postponed. It cannot be adjourned indefinitely.

The Department of Agriculture and Technical Instruction will, in June, award a limited number of trade scholarships. The object of these scholarships is to enable selected persons who have been engaged in certain specified industries in Ireland for a period of at least two years to obtain systematic instruction in the principles of science and art as applied to these industries. In this way the standard of workmanship will be raised and the industries benefited. The scholarships will be tenable for one school session (twenty-eight to thirty-six weeks) and will be of the value of £1. 10s. per week, with class fees and travelling expenses. The selected industries this year are motor engineering, plasterers' work, plumbing, power-loom testing, tanning, woollen manufacture, and painting and decorating. The examination will be on June 10 in arithmetic, English, and drawing; and application for admission to the examination must be made before May 19.

The date of the Department's examination for science and technological scholarships and teacherships-in-training at the Royal College of Science will be changed from the week beginning June 21 to the week beginning June 28. The value of the emoluments may be augmented by a bonus of not more than 50 per cent.

The Classical Association of Ireland has held two meetings this month in Dublin. On March 3 the President, Prof. R. M. Henry, came from Belfast to give a lecture on "Lucan," and on March 10 Prof. Goligher, of Trinity College, gave a lecture on "Greek Portraits."

The Irish Geographical Association has organized a series of four lectures this spring, one in each month from February to May. The first was by Dr. H. J. Fleure on "France as the Interpreter between the Mediterranean and the North," another was given in March by G. J. Clappett on "History and Geographic Control"; the other two will be by Prof. C. H. Oldham on "The new Boundaries in Eastern Europe," and by Mr. W. B. Wright on "Glacial Topography." In the summer the Association will have a geological expedition to Lambay Island, conducted by Prof. H. J. Seymour.

SCHOOLS.

THE BARNETT SCHOOL.—All credit is due, of course, to Mrs. Barnett for having, with others, founded the Hampstead Garden Suburb High School, now called the Barnett School, but in recent press notes on the activities of the school no mention was made of the work of the head mistress and her staff, who have created the senior girls' school during the past terribly trying five and a half years. When the present head mistress, Miss A. G. Baker, took over the school, there were some sixty pupils, now there are 192; the senior school had only nineteen pupils, there are now about ninety—this in spite of air raids. The school's good work has been recognized by the Board of Education.

THE report of the Royal Commission on Decimal Coinage, appointed in August 1918, to consider the placing of the currency of the United Kingdom on a metrical basis, as proposed by the Bill introduced by Lord Southwark in 1918, has just been circulated. The report decides against any alteration in the existing system.

REVIEWS AND MINOR NOTICES.

THE MODERN EDUCATOR'S LIBRARY.

- (1) *Education: its Data and First Principles*. By T. P. NUNN. (2) *Moral and Religious Education*. By SOPHIE BRYANT. (3) *The Child under Eight*. By E. R. MURRAY and H. BROWN-SMITH. (Each 6s. net. Edward Arnold.)

Of the "Modern Educator's Library," under the editorship of Prof. A. A. Cock, the first three volumes promise exceedingly well. We take Prof. Nunn's contribution first because he deals with fundamentals. Every generation needs to have the philosophic basis of the best educational thought and practice restated, and for the present generation Prof. Nunn has performed the task of restatement in a way which we do not hesitate to describe as masterly. Taking his stand on the position that "nothing good enters into the human world except in and through the free activities of men and women," he shows how education must be shaped to accord with that truth; and in doing so he passes in critical review the best of recent investigation upon routine and play, nature and nurture, imitation and instinct, knowledge and action. And, finally, lest the reader should have lost the golden thread which runs throughout this range of exposition, and in particular lest the prominence given to the social factor should seem to obscure the main issue, the author returns in the last chapter to the relation between school life and the spiritual growth of the individual pupil. As regards the form of the exposition, our chief criticism is that the writer appears not to be always sure whether he is addressing his young students or his brother philosophers. Even allowing for new terminology, explained in its proper place, the former will make wry faces when they are told that "the atavistic factors are the mnemonic basis from which the child's forward-directed horne proceeds, while the 'cathartic' action of play is the sublimation of the energies associated with them." But they will find relief when the author, with lighter touch but with equal insight, tells them about the growth of self as exemplified in "Jack." Anyhow, Prof. Nunn has written a most original and stimulating book, which all who pretend to be interested in the root principles of education must read.

(2) Dr. Sophie Bryant is happy in having chosen to write on moral and religious education now, rather than in the early part of her long and distinguished professional career. For we have reached a time when a mind of philosophic cast, which has for many years been at close grips with educational problems, may express itself freely, and at the same time acceptably, to the vast majority of thinking people. Much of the mere information she gives us could readily be obtained in other books; but the ripe wisdom which informs her whole treatment of moral education, Bible teaching, and the presentment of essential religious truth would be hard to match elsewhere.

After reading the book, we were struck by the large number of passages which we had marked for a second reading at least—such, for example, as the noble passage (pages 114–15) in which the right way of meeting the child's difficulties about the existence of evil is suggested. Whether for what she herself says, or for her guidance to the best of what others have said, Mrs. Bryant's book is of great value at the present time.

(3) The third volume in our list is the joint production of two of our wisest Froebelians, Miss Murray and Miss Brown-Smith, the former basing herself upon her experience of the nursery and kindergarten children of the comparatively well-to-do classes, and the latter upon her experience of children in State-aided infant schools. As the authors say, they have made the book between them, but have not collaborated. They have, in fact, made two books, which happen to be bound in one cover. Miss Murray's treatment is lively and personal; indeed, from our point of view, she is rather too concerned to show that Froebel was right and most other people wrong. What does that matter, except to the conscientious historian of education? Miss Brown-Smith makes

(Continued on page 240.)

FEDERATED SCHOOLS PENSIONS ASSOCIATION.

Offices - - - 36/37 OLD JEWRY, E.C. 2.

Telephone { Central 29.
 Central 35.

THE aim of the Association is to provide a Common Scheme of Pension whereby non-state-aided schools may secure for members of their staff benefits similar to those obtainable under the Teachers' Superannuation Act, 1919, and by co-operation facilitate the free interchange of Teachers between school and school.

MEMBERSHIP IS OPEN TO ALL SCHOOLS
WILLING TO ADOPT THIS SCHEME.

Fullest particulars can be obtained on application.

excellent use of the sound principle that school is in reality life on a small scale, or rather that it ought to be. She shows how the application of this principle in detail transforms the school from a prison-house to a scene of natural, joyous, and withal truly educational activity. Her philosophy is sound without being obtrusive, and it is sensibly applied.

We congratulate the editor of the series upon the first three volumes. If he can continue as he has begun, he will have deserved well of the teaching profession.

CLASSICS.

The Idylls of Theocritus. Edited by R. J. CHOLMELEY. New edition, revised and augmented. (10s. 6d. net. Bell.)

This volume will be a *monumentum aere perennius* of a scholar and soldier whom we could ill spare. Captain Cholmeley was a shining example of the finest type of classical scholar, "four-square without a flaw," and his untimely death in North Russia on August 16 last is a loss to classical scholarship which can never be repaired. It is some small consolation that he found time, like a second Caesar writing his "Commentaries" at the seat of war, to finish the corrections and additions to his life's work on Theocritus, actually while on board ship. These additions consist chiefly of a long appendix (twenty-eight pages) on the dialect of Theocritus and some thirty pages of addenda to notes and introduction, which now make the book a treasure-house of Theocritean lore. Every classical scholar will want to buy the book, if we but quote from the preface to this new edition written on board the P. & O. s.s. "Medina" ("At sea, June 1915"), where Prof. Cholmeley says, "and now that

'hinc movet Euphrates illinc Germania bellum,'

Theocritean studies must stand over until—

ἔχθρους κακὰ πέμψειεν ἀνάγκη
 . . . φίλων μόρον ἀγγέλλοντας.
 τέκνους ἡδ' ἀλόχοισιν, ἀριθμητοὺς ἀπὸ πολλῶν
 ἄσπετά τε προτέρωσι πάλιν ναίειτο πολίταις,
 δυσμενέων ὅσα χεῖρες ἐλάβησαντο κατάκρας."

We have never seen a more apt quotation, nor a more moving illustration of a scholar's mastery over his subject. The book is fully worthy of it.

"Junior Latin Series."—*Titii Livi ab Vrbe Condita Liber XXII.* Edited by J. PYPER. (2s. net. Clarendon Press.)

This, the finest of the Hannibal books, is a useful addition to the new Oxford "Junior Latin Series." Mr. Pyper has contrived to give an admirable sketch of Livy—bringing out both his methods and predilections as a writer and his qualities as a man—in a very brief introduction. There is a full Latin-English vocabulary, and sensible and useful notes. We can recommend the edition wholeheartedly on its intrinsic merits. There is, however, one drawback to its use as a school-book, which we suggest that the publishers should remove in a second edition—the pliable covers easily turn up and become "dog-eared." The book is worthy of boards.

Everyday Greek: Greek words in English, including Scientific Terms. By H. A. HOFFMAN. (5s. 6d. net. Cambridge University Press.)

This book has grown out of an American professor's needs in giving a brief course in the derivation of English words of Greek origin. Such courses are not part of professional work in this country, but may they not become expedient or necessary now that Greek is likely to be no longer compulsory in any University? Such a book as this shows the very large part Greek words play in the English language, and the advantage of even a short course of study of the Greek language. It is a well written, scholarly work. With the main object always in view, the professor's course includes the alphabet, parts of speech, formation of words, word groups, a vocabulary of Greek words, and an English index. For men of science and others who know little or no Greek, it would be very valuable. There are naturally many compromises in such a book, but we cannot agree that distinction of quantity in Greek is practically impossible for English speaking persons, and that Greek short and long vowels only differ in quantity and not quality.

ENGLISH.

"Riverside Literature Series."—*Boswell's Life of Johnson* (Abridged). Edited by G. E. JENSEN. (2s. 6d. net. Harrap.)

The somewhat formidable "Life" is here compressed into a quite modest compass by means of excision alone. No Johnsonian will admit the need for such compression, but the ordinary reader will welcome this book, the more so that the change from the original has not resulted in something entirely different, as but too often happens in such cases. The editor is evidently an enthusiastic

admirer of Johnson; indeed, to him, everything that Johnson ever was, did, or said ought to be, *ipso facto*, admired. The introduction is, in fact, a sustained eulogy of his hero. This does not mean that the book is not excellent. The only point to which exception can be taken is the notes, which are too brief to be of much use to the reader who requires notes at all.

"The Tutorial Shakespeare."—*Shakespeare: Cymbeline.* Edited by A. R. WEEKES. (2s. 3d. University Tutorial Press.)

An edition for use in upper forms, furnished with all the usual adjuncts for study that a seriously minded pupil can need, an introduction dealing with the life of, and classification of the works of, Shakespeare, the date of compilation of the play, sources, consideration of the construction, and an estimate of the characters. At the end there are adequate notes both explanatory and helpful, and a brief statement as to the function of each scene, together with the usual index and notes.

"Normal Tutorial Series."—*Shakespeare's The Winter Tale.*

By V. H. ALLEMANDY. (3s. net. Normal Press.)

Ninety pages of text and a hundred and thirty pages of introduction and notes. A learned treatise surely? No, merely a compilation intended to help candidates for minor examinations to secure a pass. The pity of it is that it will probably succeed in its object.

Home and School Exercises in Composition through Reading. By F. and J. E. PICKLES. Junior Book. (1s. 3d. net. Dent.)

Mr. Pickles's "Composition through Reading" was an original and stimulating contribution to the teaching of English in elementary schools. The present series, of which we have here the junior book, is designed for the special needs of pupils in the new central, upper standard, and day continuation schools. The method is to take a short extract of definite self-contained interest and to base upon it exercises oral and written for school and home study. But these exercises are not too closely confined to the subject-matter of the exercise; for instance, the exercises on the first extract bear upon such general propositions as thought and language, and later we have systematic exercises on word study, the increase of vocabulary, and the formality of grammar. After reading the book carefully we are convinced that it would form an excellent help to the teaching of English in the junior forms of secondary schools as well as in the schools which its authors have especially in view.

An Historical Summary of English Literature.

By E. W. EDMUNDS. (5s. net. Cassell.)

This book is exactly what it claims to be—a convenient chronological summary of English literature. In such a mass of names, dates, and opinions, the fairest test is to take a few authors at hazard and see whether the author in the limited space at his disposal has seized upon the important points. We took John Donne, "Erewhon" Butler, and George Meredith—and in no case have we any fault to find either with the relative importance assigned to each or with the definite information given. And then the book summarizes schools and movements as well as authors. In fact, we find that Mr. Edmunds is quite justified in his hope that the book may be "a safe and reliable guide to the student, helping him in the choice of what to read and drawing his attention to those opinions and criticisms which have become . . . standard and unassailable."

An Anglo-Saxon Reader. Edited by A. J. WYATT.

(12s. 6d. net. Cambridge University Press.)

This is an entirely delightful book. The extracts have been chosen most carefully, the notes are as scholarly as could be desired, and the glossary is a model of its kind. The contents are divided into Early West Saxon Prose (from the "Chronicle," Alfred's "Orosius" and the "Cura Pastoralis"), Later Prose, and Poetry. Mr. Wyatt, as he enthusiastically acknowledges, has been happy in the friends and scholars who have interested themselves in his work; now that it is completed, they will think themselves happy to have been associated with it.

GEOGRAPHY.

"Practical Modern Geographies."—*A Geography of Asia.*

By J. MARTIN. (5s. Macmillan.)

This is a remarkably good textbook, which maintains in all respects the high standard of the preceding volumes in this well known series. The author states in his preface that the present volume has been revised by two eminent authorities in India. It can be recommended strongly for use in the upper forms of secondary schools and in continuation classes where the course in geography includes a special study of the continent of Asia. Mr. Martin divides the continent into four great areas—the South-West Highlands, the Monsoon Region (the treatment of which occupies about two-thirds of the book), the Mid-Asian desert and steppes,

T.A., "Abacot Barb," London.

T. Nos., Central 621 and 12030.

and Northern Asia. He arranges his subject-matter in thirty-seven lessons, and shows how geographical and political controls have determined the conditions of life in the various regions. Each lesson commences with oral questions and practical exercises designed to train the pupil in the intelligent reading of maps and statistical tables. These are followed by the descriptive geography of the region under consideration, and the lesson concludes with questions suitable for written work at home or in class. The skill of the practical teacher is in evidence throughout the book; the facts are selected carefully and well arranged; the reasoning is easy to follow, and the conclusions arrived at are set out with clearness. The binding and paper are of pre-war quality, and the printed page is attractive to the eye. The 117 illustrations include diagrams, photographs, and an excellent set of maps. The book ends with a glossary of geographical terms, an extensive collection of questions set at various public examinations, and two indexes.

Maps showing the Distribution of Timber Trees and the Timber-Growing Areas of the World.—Arranged by J. HUDSON-DAVIES. Size 40 in. by 30 in. Cloth rollers, varnished. Nos. 2, 3, and 4. (Edinburgh: Johnston. Macmillan. 8s. net each.)

Of this series of five maps, Nos. 2 (North America), 3 (South America), and 4 (Europe and Africa) are now ready; the maps are well printed and effectively coloured. On each of these sheets there is a large map of the Continent showing the general distribution of forests, grass lands, and desert regions. Round the margin of each sheet are smaller maps (in the case of North America there are twelve), giving the exact distribution of the principal trees of the section, with the ports from which the timber is exported. This series of maps will be found particularly useful in advanced classes in geography and in schools where woodwork is taught scientifically.

"The Human Geographies."—*The Old World.* By J. FAIR-GRIEVE and E. YOUNG. (Book V. 2s. Philip.)

This book can be recommended for use in junior classes; it is printed in large type and it is well illustrated with maps and diagrams. The lessons are written in an interesting manner and the authors take great pains to explain all difficulties. In the two chapters on Europe, the climate, rivers, and coalfields of the Continent only are dealt with. The explanation of the plane table and levelling (pages 47-53) is irrelevant to a lesson on the Cape to Cairo Railway, and the paragraph on Krakatoa (page 134) is out of place in the lesson on Japan.

Europe after the Great War.—Map of Europe and six smaller maps of the New Countries. (4d. net. Evans.)

As regards the political states of Central Europe, all atlases and wall maps are now out of date, and consequently teachers of geography find themselves in a difficulty when giving lessons on the New Europe. This useful hand map, printed in colours, solves the difficulty for the present, as it shows clearly the new countries and the changed boundaries.

HISTORY.

England under the Yorkists, 1460-1485. By ISOBEL D. THORNLEY. (9s. 6d. net. Longmans.)

This volume of extracts from original documents is the second of the University of London "Intermediate Source-books of History." It is particularly welcome because the period covered by it, in common with the preceding Lancastrian period, is one which is most inadequately represented in all previous collections of select authorities. Miss Thornley has done the difficult work of research, extraction, and translation extremely well. Her introduction on the sources from which she has drawn is a model of its kind. It shows that she has completely surveyed the field of available material and that she has made herself familiar with vast stores of the stuff of which history has to be constructed. She classifies her material under five main heads—viz., Political, Constitutional, Ecclesiastical, Economic, and Social, and, finally, Ireland. Wales has no section to itself, but it is referred to in a dozen or more extracts. Our only adverse criticism of the book is that the notes which preface each extract are entirely inadequate. They give too little guidance as to the significance of the extract, and assume far too generally an intimate acquaintance with the history of the period.

The Cockpit of Europe. By A. R. HOPE MONCRIEFF. (20s. net. Black.)

The fascination of this artistic book centres in the thirty-two full-page illustrations in colour by which it is adorned. They consist of charming representations of old towns, beautiful country, and historic scenes. The region described as "The Cockpit of Europe" is primarily the Belgian Netherlands, but Luxemburg, Alsace, Lorraine, are all brought in. If a single geographical term were required to specify the country covered by the pictures

and the narrative the best would be the "Lotharingia" of the Tenth Century Federal Empire of Otto the Great. The history of this debatable land is graphically told by Mr. Moncrieff in ten chapters, which begin with an account of the campaigns of Caesar and end with a reference to the incursions of the Kaiser nearly two thousand years later. The most interesting portions of this long story are those which relate to the efforts of Charles the Bold of Burgundy to found a middle kingdom between France and Germany, and those which retell the deathless tale of the revolt of the Netherlands against the tyranny of Philip of Spain.

Outlines of European History, 1789 to 1914.

By C. L. THOMSON and M. B. CURRAN. (6s. net. H. Marshall.)

This excellent textbook is distinguished from the many others covering the same period which have recently issued from the press by two features. First, it is divided into three sections which deal respectively with 1789-1815, 1815-1871, and 1871-1914. Secondly, while the first section treats of Europe as a whole, the second and third provide histories of the European States *seriatim*. In the early part of the book the unity of the Continent is emphasized; in the later part the separateness of the Powers is made prominent, and the process of their several developments is described in a manner that would otherwise have been impossible. Both Miss Thomson and Miss Curran (Secretary of the Historical Association) are experienced teachers who know precisely what is wanted in schools. They have supplied a sketch of the history of Europe from the French Revolution to the outbreak of the Great War which will be of great value. It is at once clear and full, accurate and interesting.

Pictorial Atlas of English History. Arranged by E. J. S. LAY. (1s. 6d. net. Macmillan.)

This amazingly cheap and attractive atlas contains sixty-six carefully selected maps in black and white, illustrative of English history. A clever system of shading enables not only a lot of information to be conveyed, but also a useful idea of physical features to be given as well. The prominent feature of the atlas, however, is not its maps, good as they are, but the large collection of pictorial illustrations by which they are accompanied. Costumes, modes of travel, inventions, and many other things are set forth in a series of sketches.

"Antiquities of Middlesex."—*Middlesex in British, Roman, and Saxon Times.* By MONTAGU SHARPE. (12s. 6d. net. Bell.)

This is one of the most scholarly and thorough studies in local history which has come into our hands for a long time. Based on original research, and marked by countless evidences of wide reading and extensive knowledge, it is a model of what such an antiquarian essay should be. No Londoner who is proud of his city should fail to peruse this story of the beginnings of human activity on the Thames. No historian of ancient and medieval Britain should neglect this careful investigation of the problems of one important area of the island. There are sixteen illustrations and maps in the book. Some of them must have involved an immense amount of labour. Particularly notable are the maps showing (1) the main chariot ways through south-east Britain; (2) Saxon settlements in and round London; (3) Roman Pagi and Saxon Hundreds; (4) Domesday villis and manors. It is interesting to note that Mr. Sharpe places the scene of Caesar's crossing of the Thames at Brentford, and of Boadicea's defeat and death on Hampstead Heath. We trust that this remarkable study will have the wide circulation which it deserves.

MATHEMATICS.

The Elements of Analytical Conics. By Dr. C. DAVISON. (10s. net. Cambridge University Press.)

Dr. Davison's book may be recommended to candidates preparing for examinations which require a knowledge of elementary co-ordinate geometry, including the properties of conics referred to their principal axes. Seeing that the general equation of the second degree is not discussed, the inclusion of a few paragraphs dealing with oblique co-ordinates seems unnecessary, for no one is likely to use oblique co-ordinates unless he has advanced beyond the range of work in the book. The method of treatment follows familiar lines, but the text is not overloaded with detail, so that the student has his attention fixed on the matters which are of really fundamental importance. Sets of graduated examples, to which answers are provided, furnish abundant exercise in the application of analytical methods. Considering the size of the book, the price is rather excessive.

Integral Calculus. By Dr. H. B. PHILLIPS. (6s. net. Chapman & Hall.)

We have here the concluding part of a course in analysis. As a textbook for students of mathematics or mathematical physics it is totally inadequate, but it is well adapted to meet the needs of engineers

(Continued on page 244.)

and others who for technical purposes have to make some use of the calculus and easy differential equations. Integration is largely a mechanical process, but skill in performing it can only be acquired by working numerous examples, and this book provides the necessary material for the purpose.

MISCELLANEOUS.

A New Chapter in the Science of Government. By B. BRANFORD. (5s. Chatto & Windus.)

Readers of that remarkable book "Janus and Vesta" will welcome this equally striking book from the same author. The root of the matter was already outlined in the earlier volume, but here we have a most opportune elaboration of the original thesis, worked out in the light of all that has happened in the interval. The conflict between the ordinary national patriotism and the newer patriotism that is gathering round the solidarity of groups belonging to the same class or occupation in whatever part of the world they are found, had become acute before the war, and the fact that the occupational patriotism was completely defeated by the other was only a temporary phenomenon. Both patriotisms must find a place in the new organization of society that must now be established, and Mr. Branford has set himself the useful and urgent task of finding a *modus vivendi* between them. This he finds in the conception that they must form the warp and weft of the fresh form of government that new conditions demand. But he does not rest content with this comfortable figure of speech; he finds a means of realizing his ideal. Our present bi-cameral government stands admittedly in need of reorganization, and he suggests that one house should supply the geographical warp and the other the occupational weft. He maintains that the upper house has hitherto been mainly the province of the producers, while the lower house safeguarded the interests of the consumers.

Retaining these functions, the present House of Commons should be organized on a geographical basis, while the new equivalent of the House of Lords should represent the interests of occupations. The reconciliation thus effected appears to be threatened by the disturbing influence of a still more bitter antagonism, that between capital and labour; but here our author finds a means of peace within the occupational group by showing that "the true interests of producers (alike employers and employees) could surely be more equitably regulated in the upper chamber, reconstituted to meet the new conditions, and containing both employer and employee." The new geographical concept of regionalism is most skillfully utilized in working out the proposed scheme, and an ingenious bi-tripartite classification of occupations is supplied, and all manner of fascinating parallels are drawn with references to the sciences and arts. No real justice can be done to a work of this kind in a brief review. The earnest student of politics and the active administrator will each find genuine help in these pages. Much more will be heard of this book.

Some Memories of William Peveril Turnbull.

By H. W. TURNBULL. (10s. 6d. net. Bell.)

This book was worth compiling and is well worth reading. Its bearing on the history of education is not considerable, though in parts it illustrates the processes in which Turnbull was concerned more faithfully than some other books made up of amusing experiences. Turnbull was a truly fine character; but his subtle simplicity and his reserve, maintained resolutely except on rare occasions, prevented him from making the conspicuous mark on public education which might have been expected. Many inspectors, small by comparison, enjoyed greater fame than this big-brained, accomplished, high-principled scholar and musician. He had a humorous contempt for some of the conventions of ordinary lives and persons, and often alarmed those who did not know him; but to those who did he was "sweet as summer," and no one could forget the beauty of his face lit up by a smile. His son has done his work well and modestly. Turnbull speaks all through for himself and, according to his wont, at no great length.

The Principles and Practice of Commercial Correspondence.

By J. STEPHENSON. (7s. 6d. net. Pitman.)

In Mr. Stephenson's latest work, the letters are arranged in chapters, together with suitable instruction in the business operations which give rise to them. For practice in correspondence, the book should prove most useful; it contains several interesting series of letters which will provide valuable exercise in précis-writing for students training for examinations. Insufficient space is devoted, however, to the treatment of the different methods of buying and selling goods, and the reasons for such methods. The student is apt to be misled by brief generalizations; for example, we are told on page 121 that "the commission agent does not incur any risk of loss, and is always covered for his disbursements by the value of the goods." This is not always the case. We know one firm of

importing commission agents on this side who have been heavily involved in loss through consignments falling short of the amounts advanced on them. Importers and exporters, even when working on commission, cannot always protect themselves; and acumen in rejecting undesirable offers and undertaking work that will pay them is part of their qualification for the business. The same objection must be raised to the statement that "Export on one's own account can only be carried on successfully by such firms as have their own branches abroad."

SCIENCE.

Practical Science for Girls as Applied to Domestic Subjects.

By EVELYN E. JARDINE. (3s. Methuen.)

Science mistresses will find this little book of experimental exercises in simple physics and chemistry suggestive and helpful in drawing up schemes of instruction for their own classes. It is, however, scarcely suitable as a textbook for use by girls themselves. The sequence of subjects leaves much to be desired, and the omissions are often startling. The ten illustrations add little to the usefulness of the volume. But there is a distinct need of a book which, while imparting sound ideas of the scientific method, will show girls the importance of chemistry and physics for an intelligent understanding of the processes of the kitchen and laundry.

Chemistry for Public Health Students. By E. G. JONES.

(6s. net. Methuen.)

This excellent little manual has been written for the use of students who are preparing for the Diploma in Public Health. The treatment of the practical side of the course is admirably accomplished, and the inclusion of a large number of worked examples of the necessary calculations will be found most useful. The earlier part of the book consists of a concise summary of the principles of volumetric and gravimetric estimations, illustrated by determinations of particular value to the type of student for whom the book is intended. This section may well serve as recapitulatory; it is followed by chapters dealing with milk, butter and margarine, alcoholic beverages, foods and preservatives, water, sewage effluents, air, and disinfectants. Those portions of the work in which water and sewage are discussed are clearly and excellently written. A student who works through the estimations described by the author cannot fail to possess a sound working knowledge of the subject.

Chemistry in Everyday Life. By E. HENDRICK.

(3s. 6d. net. University of London Press.)

Some time ago we had the pleasure of reviewing Dr. Hendrick's "Everyman's Chemistry." The present volume is every whit as racy and instructive, for the author is an enthusiast, a missionary, and withal a very human and persuasive propagandist. He is all for the inculcation of chemistry in the workshop, the field, the street, and the home—a veritable scientific Pussyfoot. He says: "A knowledge of chemistry is something like a good wife. It will help a man along with his work." And again: "Chemistry is the politics of matter." In this present little book there are treated some of the commoner problems of everyday life, such as laundry work, fuel, fertilizers, soap, iron and steel, ferments and catalysis. There are probably scores of manuals on our shelves which discuss the science of everyday life; but there is none, in our opinion, which puts more keen living interest into the subject than the book before us. In the first place, the language is not only simple, but it is arresting, nervous, and curiously attractive; and, in the second place, the author is so obviously in earnest over it all. The somewhat jaded teacher should try a course of Hendrick.

VERSE.

"Golden Treasury Series."—*A Treasury of Seventeenth Century English Verse.* Chosen and Edited by H. J. MASSINGHAM. (3s. 6d. net. Macmillan.)

It was a happy thought of Mr. Massingham to publish this anthology of a period which is, as he says, the most neglected of any in English literature. It is obviously a most difficult period with which to deal, but, by omitting Milton and Herrick and a few familiar poems of other writers, the editor has given us an ideal selection of noble poetry. His introduction is extraordinarily helpful, not only for its skilful interpretation of the mysticism which is the keynote to so many of the poems which follow, but also for the characterization and differentiation of some of the leading poets. As a transition from the Romance of the Renaissance to the Common Sense of the Eighteenth Century, these exquisite poems have an historical interest which can only be studied by means of such a lavish wealth of material as Mr. Massingham gives us. On every ground this latest addition to the "Golden Treasury Series" is to be heartily welcomed.

CONVEYANCING DEPARTMENT.

This Department is now under the direction of **Mr. F. C. NEEDES, B.A.**, whose experience, advice, and assistance are unreservedly placed at the disposal of **Purchasers** free of charge.

TRANSFERS and PARTNERSHIPS arranged by correspondence or interview.

INSPECTIONS and VALUATIONS undertaken. **FOR SALE** (*inter alia*).

1. **Kent.—Flourishing Good Class Girls'.**—Situate in good Premises and Grounds. 18 Boarders. Fees 22 and 25 guineas a term. 100 Day Pupils. Fees 4½ and 6 guineas a term. K.G. (mornings only), 3 guineas a term. Receipts about £2,400. Vendor, who is retiring from the profession, will accept one term's Capitation Fees, and sell the School furniture, &c., at valuation. Personally investigated and highly recommended to any lady or ladies of good educational experience.
2. **Wilts.—Flourishing High School for Girls.**—For sale through ill health of the vendor. About 24 Boarders and 70 Day Pupils. Gross receipts over £2,000 and the profits from £600 to £700. Very good commodious premises on a valuable lease with a good accommodation and Gym. Rent only £120 per annum. Price for goodwill and beneficial lease £700. The School furniture, &c., can be taken over at valuation to suit the purchaser's interests.
3. **Denbigh.—Good Class Girls' and Boys' School for Sale.**—Through marriage of the Head Mistress. 23 Day Pupils. Fees 2 to 4 guineas a term. Gross receipts £200. The little boys are prepared for the County School, so there is an excellent chance of developing this side of the School. District rapidly growing, and about 1,000 new houses being erected. Suitable for married man wishing to open a Boys' Preparatory School. Goodwill to be arranged. School furniture £50.
4. **Somerset.—A high-class Boarding and Day School.**—The receipts from which were £523 last term. Good premises and grounds. One term's capitation fees accepted. The whole of the excellent furniture, including silver, &c., can be had for about £1,300, or at valuation. Payable £500 down and balance by instalments. Or a **Partner** will be accepted with view to early succession.
5. **North of England.—Flourishing Good Class Girls'.**—Estab. 40 years. 22 Day Boarders. Fees £3 a term plus tuition fees. 141 Day. Fees from £2.7s. to £4 a term. Receipts 1918, £1,786. Net profits £562. Good premises—vendor's freehold—will sell for £1,450, mortgage arranged or will let. School has a splendid connexion and has a good reputation. Goodwill about £800. School furniture, &c., at valuation. Excellent chance for two or more ladies.
6. **Glam.—Senior English Mistress** required, who will shortly take over a flourishing Boarding and Day School, on account of marriage of Vendor. Two good houses, including a large specially built Schoolroom. Rent £130 per annum. Goodwill, one term's fees, and school furniture at valuation. Easy terms of payment can be arranged.

PRIMARY SCHOOL NOTES.

The Increase of Sickness among Teachers.

THERE are unmistakable signs that the strain undergone by teachers during the period of the war, when additional school and class duties were cheerfully undertaken by those teachers who remained in the schools, is being followed by a grave increase in the number of cases of breakdown in health among members of the profession. Owing to the non-return of service teachers and the increasing shortage of entrants to the teaching ranks, the relief promised by the return of peace has not been given; on the contrary, the difficulties of scholastic work have been intensified. It is evident that the burden of responsibility upon the staff of a school below the recognized strength will eventually find out those of its members who are physically weakest. Their absence from duty naturally adds to the strain upon those who are left; and at the present time teachers throughout the country spend the week-ends in resting in preparation for the following week. In many cases they are undergoing courses of medical treatment whilst endeavouring to carry on school duties; and there is no doubt that loyalty to their colleagues and a regard for the welfare of their schools keep many at work who ought to be at home.

* * * *

A Rearrangement of School Holidays.

UNTIL a sufficient supply of teachers comes forward, it will be the duty of local education authorities to conserve the effectiveness of existing teachers. One main cause of anxiety and ill-health will be removed when substantial improvements in salary are introduced; but much could be done by a rearrangement of the vacation periods. For example, there is no break in many schools between the summer holidays and Christmas and again between Christmas and Easter. These are generally long and trying terms, and the interposition of a holiday of one week about the middle of each term would have important results in improving the efficiency of the teaching power. The greater prominence now given to the physical development of children and the methods of individual study which are being adopted in the schools, undoubtedly involve a greater degree of concentrated effort on the part of the teacher than was called for under a system of formal tuition. There is agreement among teachers that the responsibility of professional duties has become intensified during recent years.

* * * *

Ill-health among School Children.

THE returns of school attendance all over the country show a progressive decrease during the last few years, and while allowance may be made on account of the exclusion from school of children who are in indifferent health, there is agreement among teachers that the physical condition of their pupils is less satisfactory than it was before the war. The greater activity of child welfare committees in securing the baby-life of the country is now beginning to manifest itself in the schools, which now contain numbers of pupils of weakly health who, in other circumstances, would probably have died in infancy. The scarcity of good milk, the absence of butter, the lack of fresh meat and sugar, the high expense of warm clothing and boots, have all been paid for in the health of the children. The improved school medical service, which is now promised, will therefore be exceedingly welcome. Strong measures will be necessary to increase the resisting power of children to disease.

* * * *

The Salary Basis for Head Teachers.

CONSIDERABLE criticism is being expressed by head teachers of primary schools at the basis of grading schools adopted by the Burnham Committee. It is contended that to adopt the average attendance of any school for the past three years as a basis for calculating the salary to be paid for the next three years is not unjust in itself, but unwise as a matter of administrative policy. It is admitted that the attendances of the last three years have been abnormally low on account of influenza and other epidemics, the falling birth-rate, and the prevalent laxity of school attendance owing to the non-enforcement of the full penalties of the Attendance By-Laws. The Burnham Basis makes no allowance for the increase of school attendance which will follow the abolition of half-time labour and the raising of the school-leaving age to fourteen years, which will follow the introduction of the new Education Act. This will cause an increase of 14 per cent. in the attendance

Continued on page 248.)

HARRAP'S LATEST PUBLICATIONS.

WEBSTER'S EUROPEAN HISTORY.

[Just ready.]

With many Illustrations and Maps.

- Part I. ANCIENT TIMES. To the Fall of Rome. Demy 8vo. 342 pages. 6s. net.
 .. II. MEDIEVAL AND EARLY MODERN TIMES. From the Fall of Rome to the French Revolution. Demy 8vo. 450 pages. 7s. 6d. net.
 .. III. MODERN TIMES. From the Age of Louis XIV to 1919. Demy 8vo. 350 pages. 6s. net.

The above three volumes by Prof. Hutton Webster, Ph.D., form a complete course of history for the middle and upper forms of secondary schools. The volumes are very fully illustrated, and a suggestive series of questions is added to every chapter.

A Prospectus will be sent on application.

PROF. E. LEBONNOIS, 16 AVENUE DE CREULLY, CAEN.

of schools, on account of which no remuneration whatever will be received by head teachers. The average attendance basis, again, makes no allowance for the pupils who are most difficult to teach; for example, if the average works out at 87 per cent. in any particular school, the children who represent the remaining 13 per cent., and who comprise the delicate and irregular scholars, are, in effect, ignored as an important factor in the teacher's professional work. And since, in the first grade of head teachers there is only a difference of £30 per annum between the maxima of men assistants and head masters, there is every prospect that assistants will decline to undertake the responsibility of becoming principal teachers. Well-informed opinion among head teachers maintains that candidates of the best type will not be forthcoming until the basis of remuneration is fixed in accordance with the number of children taught—that is, upon the number of pupils on the school roll.

* * * * *

N.U.T.—The Easter Conference.

THE Jubilee Conference of the N.U.T., which will open at Margate on April 5, will be attended by nearly 2,000 delegates, representing 114,000 members. The presidential address will be delivered by Miss J. Wood, of Manchester, who succeeds Mr. Folland in the chair. Miss Wood has been a notable worker in the National Federation of Class Teachers, and is a strong supporter of the principle of equal pay for men and women teachers. The Conference will comprise practically all the social functions which distinguished it before the onset of the war; and the practical issues arising out of the proposals of the new Education Act are expected to occupy a substantial proportion of the proceedings.

PRIZE COMPETITIONS.

THE winner of the February competition is Mr. E. Latham, 61 Friends Road, Croydon.

The prize for the March competition is awarded to "Pioneer"; *proxime accesserunt* "Paulus" and "Spero."

THE ANNUAL

"DIRECTORY OF EDUCATIONAL ASSOCIATIONS"

which has been described as ONE OF THE MOST USEFUL RETURNS PUBLISHED BY ANY BRITISH EDUCATIONAL JOURNAL appeared in the MARCH, 1920, issue of "THE JOURNAL OF EDUCATION AND SCHOOL WORLD"—a paper "indispensable to all school and college reading-rooms in these islands."—*The Westminster Gazette*.

Early application should be made for extra copies for file purposes. Previous "Directory" issues have run rapidly out of print.

Extract from Anatole France's "Le Mannequin d'Osier."

By "PIONEER."

The elms of the Mall were only just clothing their dark limbs with pale verdure, fine as dust. But on the slope of the hill, crowned with old walls, the flowering orchard trees displayed their round white heads or their pink pyramids in the clear, quivering daylight which smiled between two squalls. Far off, the river, enriched by the spring rains, flowed white and naked, brushing with her swelling sides the lines of slender poplars which fringed her bed, voluptuous, invincible, fruitful, eternal, a true goddess, as she was when the boatmen of Roman Gaul offered her copper coins and set up in her honour, before the temple of Venus and Augustus, a votive slab rudely carved with a galley and its oars. Everywhere, in the wide valley, the sweet, timid youth of the year shivered over the ancient earth. And M. Bergeret walked alone, with slow, unequal steps, beneath the elms of the Mall. He went with a mind restless, many-hued, erratic, old as the earth, young as the apple blossom, void of thought and full of confused images, mournful and yearning, gentle, innocent, sensual, melancholy, trailing his weariness, and pursuing illusions and hopes whose very name, shape, and aspect he did not know.

A minute study of the passage from "Le Mannequin d'Osier" appeared in *Modern Language Teaching* for July, 1914, under the title of "Essai d'Explication de Texte." The author, Prof. Boillot, pointed out that the keynote of the passage is the influence of Nature on man, a theme hackneyed, yet ever fresh when treated by a man of genius. Nature is shown as having two contradictory characteristics—youth, *la jeunesse de l'année*, and old age, *la vieillesse de la terre*, and the man as being at the same time weighed down by the burden of his misfortunes, yet full of vague desires and aspirations to which he can hardly give a name. When this central idea is seized, and the comparison of the river to a woman grasped, most of the difficulties disappear. *Mall* is, of course, nothing but the English "Mall"; *quenouille* is a gardener's term, thus defined by Littré, *arbre fruitier taillé en forme de quenouille, de manière que le plus grand diamètre est situé vers le milieu de sa hauteur*. The best translation that preserved the exact meaning was Menevia's, "white or rosy heads rounded or cut in distaff form." For *frôlait* we like "caressed."

(Continued on page 250.)

THE "NEW ERA" GLOBES.

These are small Globes suitable for distribution round the Geography class. Cheap, durable, and attractively coloured, they aim at supplying a long-felt want. A series is in course of publication, including Globes, showing respectively the World's Orographical Features, Rainfall, Temperature, the British Empire, and Explorers' Routes. Full particulars to be obtained from—

Miss E. M. WALTERS,

71 and 84 Goldstone Villas, HOVE.

JUST PUBLISHED.

From Public School to Navy

An Account of the Special Entry Scheme.

Edited by Lieutenant W. S. GALPIN, R.N. With
Preface by Commander VISCOUNT CURZON, M.P.

Amongst other information, the work gives a complete account of the Special Entry Scheme for Cadets entering the Royal Navy from the Public Schools, from the time the scheme was first started in 1913 up to the present date. It includes records of the original entry of Public School Cadets who underwent their training on board H.M.S. *Highflyer* before the outbreak of war records of all the successful entries of Public School Cadets, who during the war received their training at the Royal Naval College, Keyham, and also records of those Public School Cadets who are now undergoing training on board the Special Entry Cadet Training Cruisers *Carnarvon* and *Cumberland*.

ADDRESS YOUR INQUIRIES TO

MCDUGALL'S EDUCATIONAL Co., Ltd.,
8 Farrington Avenue, London, E.C. 4.

London Hospital Medical College and Dental School.

(UNIVERSITY OF LONDON.)

THE Medical College and the Dental School of the London Hospital are fully equipped to meet modern requirements. The various departments are under the direct control of University Professors and Lecturers, who devote their time entirely to work in their Department and who are assisted by a number of Demonstrators.

The Hospital contains 933 beds and is the largest General Hospital in England. Its position in the neighbourhood of the extensive docks, factories, and workshops of the East of London renders it for accidents one of the largest Hospitals in the world. The Wards, Out-patient and Special Departments present a wide field for clinical instruction and afford exceptional opportunities for acquiring an extensive and practical knowledge of all phases of disease.

Entrance Scholarships are offered in Science. An Entrance Scholarship is also offered in Anatomy and Physiology to students of the Universities of Oxford and Cambridge. Numerous Prizes are awarded in all subjects of the curricula. A large number of appointments are open to students of the Hospital recently qualified.

Clubs' Union, Athletic Ground of thirteen acres, Students' Hostel, &c.

For particulars apply to:—

PROFESSOR WILLIAM WRIGHT, M.B., D.Sc., F.R.C.S., DEAN.

London Hospital Medical College,
Mile End, E. 1.

Of *la jeunesse timide . . . antique* there were several pretty renderings. Perhaps "the shy and charming youth of the year stood trembling on the ancient earth" (Homunculus), and "the childhood of the year shivered on the ancient land" (Calvus) were the best; *frissonnait*, Prof. Boillot points out, suggests at once *le froid et la pudeur*.

Three competitors sent in more than one version; in such cases, only the one which is picked up first is considered.

It was unfortunate that three competitors chose "Nil Desperandum" as a pseudonym; one gave neither initials nor pseudonym.

We classify the 179 versions received as follows:—

Class I.—(a) Pioneer, Paulus, Spero, E.C.L.P., December, Homunculus, Katty Ann, Bésigue, Viking, Ray, Mitis et Fortis.

(b) Em, Wanderer, Esse quam videri, Glenleigh, Calvus, Menevia, M.B.H.M., Sud-est, Noémi, Mimi, Nibbidard, Will o' the Wisp, Ghurka, Emile (March 13), Umbria, Pat, Swinford, H.B.S., Gothicus, Caesar, Primrose, Teufelchen, *στέφανος*.

Class II.—Garnet, Borealis, K.E.F., Jolande, Irony, Never say die, D.B.A., Tigris, Mariposa, W.W.M., L.S., Lux, Valentine, Priscilla, *φιλολόγος*, Agricola, Emile, Oliver, Bobby, B.P., Vanessa, Kiwi, Diomède, Rip van Winkle, Père Jacques, Pot-pourri, Avonian, Lanka, Nil desperandum (2), Poker, Leander, Hibernia, E.W., Microbeovitch, F.B., Swastika, Klob, H.C.E., Le petit Noël, Llewellyn, Dickie, Hironelle, Véronique, R.I.P., M.P., Puella, W.E., Soufflet, Exercise, Leo, Débutante, Chefoo, Nil sine pulvere, Regulus, Livia, Tregonnissey, Micky, Pegmur, Jumbo, Straford, Chymyny, Zephyr, Vagabond, Puma, Rameses, Sirach, Bruno, John, Kismet, *Ελπίς*, E.W.F., Chingleput, M.H.

Class III.—Chandon, Sionag, F.K., St. Michael, Aiguisé, Eibob, Tik, S.M.E., Memus, Iolaus, Chow, Jumbo, Elisha, Wyuna, Angélique, Alpha, Cassandra, Excelsior, Nil desperandum (West Bromwich), Dent, Geai, Nemo, Aqua, Perseverance, J.A.R.L.F., Tubbie, Fifi, M.G.L., Decima, Aventureuse, Erindale, Forrestier, Coney Hatch, Gregory, Grand-père, Les Lunettes, Alan, Ecossais, L'Archevêque, Stella, M^e, Carolus, Sirrom, Maisie, Yonette, Damaris, Grätchen, Crystal.

Class IV.—F.C.H.J., Marguerite, Stanislaus, Canoe-Shoes, Tulipe Noire, H.L.C., Big Ben, Lucienne, Ivy, Amélie, Science, Dyob, Borée, Nostaw, Humorist, Noremac, Perky, Maquignon, Tich, Petit Poucet, Kansas, Percinet, Cinderella.

A Prize of Two Guineas is offered for the best translation, in prose or verse, of the following poem by Jean-Arthur Rimbaud, written in 1870:—

LE DORMEUR DU VAL.

C'est un trou de verdure, où chante une rivière
Accrochant follement aux herbes des haillons
D'argent, où le soleil, de la montagne fière,
Luit. C'est un petit val qui mousse de rayons.

Un soldat jeune, bouche ouverte, tête nue
Et la nuque baignant dans le frais cresson bleu,
Dort; il est étendu dans l'herbe, sous la nue,
Pâle dans son lit vert où la lumière pleut.

Les pieds dans les glaïeuls, il dort. Souriant comme
Sourirait un enfant malade, il fait un somme.
Nature, berce-le chaudement: il a froid!

Les parfums ne font pas frissonner sa narine;
Il dort dans le soleil, la main sur sa poitrine,
Tranquille. Il a deux trous rouges au côté droit.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on April 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

Designed to arouse the interest and attention of the Pupil and to eliminate the drudgery

To ASSISTANT MASTERS ASSISTANT MISTRESSES LADY MATRONS

¶ Candidates seeking appointments in Public or Private Secondary or Preparatory Schools at home or abroad should apply to

Truman & Knightley —SCHOLASTIC AGENTS—LTD—

who have a large number of EASTER vacancies on their books, and who are already receiving instructions respecting vacancies for SEPTEMBER.

¶ There is a great demand for both Assistant Masters and Assistant Mistresses, and serious efforts are being made to render the prospects in the teaching profession more attractive and equal to those in other professions.

¶ In addition to the large number of appointments open to University men and women in Public Schools where the remuneration is being fixed on improved scales, there are many vacancies in Preparatory Schools where young University men without previous experience can command commencing salaries ranging from £120 to £200 a year or more, according to their degrees, in addition to board and residence in term time.

¶ There are many openings for University women, and also for those with Higher Local or other good certificates interested in children and in teaching, in high class private schools for girls, where the conditions are pleasant, the hours not excessive, and salaries range from £80 to £200 or more, with board and residence, according to age, qualifications, and experience.

¶ There are also vacancies for House Mistresses, Lady Housekeepers, and Matrons in schools at salaries ranging from £60 to £100 or more per annum, with board and residence.

¶ THERE IS NO CHARGE FOR REGISTRATION. The requirements of each applicant receive careful consideration and attention, and the rate of commission charged to those for whom an appointment is secured has recently been reduced.

Offices: 158-162 OXFORD STREET, LONDON, W.1.

Telegrams: "TUTORESS, PHONE, LONDON."

Telephone: MUSEUM 1136.

for Teachers, which are strongly recommended as
suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Bedford, Bel-
fast, Birmingham, Blackburn, Brighton, Bristol,
Cambridge, Cardiff, Croydon, Dublin, Edinburgh,
Exeter, Glasgow, Hull, Leeds, Liverpool, London,
Manchester, Middlesbrough, Newcastle-on-Tyne,
Norwich, Nottingham, Oxford, Plymouth, St.
Andrews, Sheffield, Southampton, and several other
towns.

Information regarding the Examinations may be
obtained from the SECRETARY, L.L.A. Scheme, The
University, St. Andrews.

Joint Agency for Women Teachers

OAKLEY HOUSE,

14, 16, & 18 BLOOMSBURY ST., LONDON, W.C.1.

(Under the management of a Committee appointed by
the Teachers' Guild, College of Preceptors, Head
Mistresses' Association, Association of Assistant
Mistresses, and Welsh County Schools Association.)

This Agency has been established for the purpose
of enabling Teachers to find work WITHOUT
UNNECESSARY COST. All fees have therefore
been calculated on the LOWEST BASIS to cover
the working expenses.

No Registration Fees are charged to Members of
the above Associations, and their commissions are
reduced.

Hours for Interviews—

11.30 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11.30 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be
arranged.

Registrar—Miss ALICE M. FOUNTAIN.

The Association of University Women Teachers.

108 VICTORIA STREET (1st floor), S.W.1.

Recommends Teachers and Lecturers. Teachers,
with University qualifications, requiring posts in
Public or Private Schools, are invited to apply to the
Secretary—Mrs. B. BROUGH. Subscription 5s. per
annum. Tel.: VIC. 2483.

THE COLLEGE OF PRECEPTORS

Incorporated by Royal Charter

BLOOMSBURY SQUARE, LONDON, W.C.1

The Summer Examination of Teachers for
the Diplomas of A.C.P. and L.C.P. will be
resumed on the 3rd of August, 1920. The
Examination will be held at Birmingham,
Bristol, Cardiff, Dublin, Leeds, Liverpool,
London, Manchester, and Newcastle-on-Tyne.
The Regulations may be obtained from the
Secretary.

Examinations for those who desire to
satisfy the preliminary requirements of the
Law Society, the General Medical Council,
the Conjoint Board of the Royal Colleges of
Physicians and Surgeons, the Pharmaceutical
Society, and other bodies, are held four
times a year, viz., in March, June, Sep-
tember, and December, in London and at
provincial Centres in England, Wales, and
Scotland. The Regulations may be ob-
tained from the Secretary.

For announcements of

UNIVERSITY CORRESPONDENCE COLLEGE

THE Association is the Amalgamated Incorporated British College of Physical Education founded in 1891, the Incorporated Gymnastic Teachers' Institute founded in 1897, and the National Society of Physical Education founded in 1897, and is an Examining Body for Teachers of Physical Training.

Membership consists of Students and Members. Students are persons in training who have passed the preliminary examination and Members are Teachers of Physical Training who have passed the final or qualifying examination for membership.

The syllabus of examinations provides for a three years' course in Physical Training and includes the British and Swedish systems and that contained in the Syllabus of Physical Exercises issued by the Board of Education.

The Association also holds a special examination for the Elementary School Teachers' Certificate for Physical Training.

Full particulars of the examinations of the Association, conditions of membership, &c., may be obtained from the Hon. Secretary, Mr. T. WILLIAMS.

Educational Authorities and Principals of Colleges and Schools requiring fully qualified Teachers of Physical Training should apply to the Hon. Secretary.

PHYSICAL TRAINING COLLEGE, QUEEN ALEXANDRA'S HOUSE GYMNASIUM, KENSINGTON GORE, S.W. 7.

EDUCATED GIRLS TRAINED as TEACHERS of Drill, Gymnastics, Games, Dancing, Fencing, Swimming, Massage, and Remedial Exercises. A four terms' course in Massage only can be taken separately. Apply for prospectus to The Misses BEAR, Principals.

BEDFORD COLLEGE OF DANCING AND PHYSICAL CULTURE.

The Crescent Studios, 42 The Crescent, Bedford.

MISS MILDRED BULT receives resident and non-resident students to train for the profession. A thorough training in Technique in all branches of Dancing and in Class Teaching given.

The course includes Drill, Gymnastics, Fencing, and Voice Production. Students live in the Principal's pleasant private house and have every home care and comfort. For Prospectus apply—Miss BULT.

BRISTOL PHYSICAL TRAINING COLLEGE, 30 APSLEY ROAD, CLIFTON, BRISTOL.

TRAINING in Swedish and British Gymnastics for public examination. Tennis, Hockey, Cricket under a County player. Swimming, Massage and Remedial Gymnastics under a certificated Masseuse. Anatomy, Physiology, Hygiene.

Dancing, Ballroom and Ballet, Dalcroze Eurhythmics.

Students prepared for the advanced certificate of The English Folk Dance Society.

Residential fees on application to—The Misses JENNINGS, HOLBROW, and COLSON.

For other Physical Training Advertisements see pages 263, 266, 281.

Truman & Knightley

SCHOLASTIC AGENTS LTD

This Agency is under distinguished patronage, including that of the Principals of the majority of our leading Schools.

Assistant Masters and Tutors.

This department is under the personal direction of Mr. JAMES HEARD, B.A. (of Westminster and Trinity College, Cambridge).

Assistant Mistresses.

The work of this department is divided into four groups, each under a trained Assistant, so that the requirements of each client may receive individual attention.

Lady Matrons, Housekeepers, and School Secretaries.

This department is under the personal direction of a Trained Lady Superintendent.

THERE IS NO CHARGE FOR REGISTRATION, and the rate of commission charged to those for whom an appointment is secured has recently been reduced.

Transfer of Schools and Partnerships.

This department is under the personal direction of Mr. TRUMAN, who has had a wide experience in the conduct of negotiations connected with the transfer of schools, and who is in a position to give sound advice and assistance to those seeking to buy or sell schools and partnerships. NO CHARGE IS MADE TO PURCHASERS.

All communications and inquiries are treated in the strictest confidence.

Offices :

158-162 OXFORD STREET, LONDON, W.1.

Telegrams: "Tutoress, Phone, London."

Telephone: Museum 1136.

SUMMER SCHOOLS, 1920.

See also pages 263, 271, and 310.

FROEBEL SOCIETY AND JUNIOR SCHOOLS ASSOCIATION.

A SUMMER SCHOOL

will be held from August 3rd to August 24th, 1920, at Queenwood, Darley Road, Meads, Eastbourne. Courses of lectures on Education, Eurhythmics, Geography, Handwork, and Story Telling will be given.

Application should be made at an early date.

Further particulars may be obtained from—The Secretary, The Froebel Society, 4 Bloomsbury Square, London, W.C.1.

Université de Lausanne.

COURS DE VACANCES, ÉTÉ 1920.

- 1^{re} série: 26 juillet-20 août.
2^e série: 3-27 août.

ETUDE théorique et pratique de la **langue française**. Cours de littérature et d'histoire, de phonétique et d'histoire de la langue. Exercices pratiques (prononciation, conversation, traduction, travaux écrits) par classes peu nombreuses.

Finances d'inscription: 80 francs pour une série complète; 50 francs pour les cours seuls.

Pour tous renseignements s'adresser au
Secrétariat de l'Université de Lausanne (Suisse).

OXFORD UNIVERSITY.

A VACATION COURSE in Education will be held in August 1920. It is open to both men and women and is not confined to members of the University.

Graduate teachers of seven years' standing may obtain the University Diploma without further residence.

Apply—THE DIRECTOR OF TRAINING, 22 St. John Street, Oxford.

UNIVERSITÉ DE RENNES (BRETAGNE, FRANCE).

FRENCH COURSES FOR FOREIGNERS OF BOTH SEXES.

1. HOLIDAY COURSES at RENNES during the month of July.
2. During the scholastic year at RENNES (Faculté des Lettres).

WINTER TERM: From November 15th to February 15th.

SUMMER TERM: From March 1st to June 8th.

Phonetics (Phonograph), Diction, Conversation, Grammar, Composition, Translation, Lectures on French Institutions and Literature.

DIPLOMAS:

"Diplômes de langue et de littérature françaises"—"Doctorat."

Reduction on fares from Dieppe or Calais to Rennes, and from Southampton to St. Malo.

Apply for Prospectus to

"Bureau de Renseignements,"
Faculté des Lettres,
Place Hoche,
RENNES.

UNIVERSITY COLLEGE OF WALES, ABERYSTWYTH.

SUMMER SCHOOL, AUGUST, 1920.

THE TWELFTH Annual Summer School will be held for three weeks from August 2nd to 20th.

Instruction will be provided in the following subjects:—

GEOGRAPHY.

HISTORY.—Methods of Study and Teaching.

PRINCIPLES OF EDUCATION.—Training of Adolescence, Schoolroom Problems, Modern Developments and Ideas.

RURAL SCIENCE.

ARTS AND CRAFTS.

BIOLOGICAL SCIENCE (July 26th to August 7th).

LIBRARY SERVICE (July 26th to August 7th).

MUSIC (August 9th to 20th).

Board and residence (if required) in the Halls of Residence. Application for residence should be made before June 15th, 1920.

For further particulars and entrance form apply to the REGISTRAR of the College.

UPLANDS SUMMER MEETING.

July 29—August 14.

AT THE UPLANDS FARM, WERNETH LOW, CHESHIRE.

Lectures and discussions dealing with "Principles of Educational Reform." Prof. J. J. FINDLAY and others.

Open Air activities, including Farm and Garden Work, Rural Handicrafts, &c. Play Production, under the direction of the British Drama League, Social Survey.

A camp will be run in connexion with the meeting. Prospectus from the SECRETARY, 3 Talbot Road, London, N.6.

Institut Pédagogique International. FRENCH COURSES AT CAEN (NORMANDY).

The popular French Courses at Caen, the first of the kind to be established in France, are still the best and most popular.

HOLIDAY COURSES:

From July 1st to August 30th.

Phonetics—Reading—Conversation—Study of Authors—Literature—Composition.

DIPLOMAS AND CERTIFICATES.

Examinations for the "Diplômes de l'Institut Pédagogique International."

For full information, apply to—

PROF. E. LEBONNOIS, 16 AVENUE DE GREULLY, CAEN.

Dalcroze Eurhythmics.

The SUMMER SCHOOL

WILL BE HELD AT

OXFORD, AUGUST 16th to 18th inclusive.

Classes in RHYTHMIC MOVEMENT,
SOLFEGE, and IMPROVISATION.

PROSPECTUS ON APPLICATION TO—

The DALCROZE SCHOOL of EURHYTHMICS, Ltd.,
23 STORE STREET, LONDON, W.C.1.

SUMMER SCHOOLS, 1920.

See also pages 263, 270, and 310.

COUNTY COUNCIL of the WEST RIDING OF YORKSHIRE.

EDUCATION DEPARTMENT.

A RESIDENTIAL VACATION COURSE

for Men and Women teachers, which will include the subjects shown below, will be held at the

TRAINING COLLEGE, BINGLEY,

from the 4th August to the 18th August, 1920.

A General Course on Education	Prof. JOHN ADAMS, M.A., B.Sc., LL.D.
The Teaching of Informal Domestic Subjects ...	Miss G. E. IRONS.
Teaching of Music in Schools	J. E. BORLAND, Esq., Mus.Doc., F.R.C.O.
Teaching Methods of Appreciation of Art ...	S. CLEGG, Esq.

Teaching of Organized Games	Miss W. S. CLARKE, Diploma of the Bergman Osterberg Physical Training College.
Teaching of English Phonetics and Reading ...	Miss E. M. NEROUTSOS, Camb. Mod. Lang. Tripos.
Teaching of History ...	Miss E. H. SPALDING, M.A.

Special Courses.

Teaching of Handwork ...	Miss E. M. DEANE, assisted by Miss M. M. COMER.
Teaching of Needlecraft...	Miss M. SWANSON.
Special Course for Teachers in Rural Schools	Prof. O. V. DARBISHIRE, B.A., Ph.D.; C. W. H. GREAVES, Esq., B.Sc.

Teachers will be accommodated in the Halls of Residence. A Handbook giving full particulars may be obtained gratis from the EDUCATION DEPARTMENT (Secondary Branch), County Hall, Wakefield.

PHYSICAL TRAINING COURSE

IN THE SWEDISH SYSTEM (P. H. LING'S)

for Men Students

AT STOCKHOLM, SWEDEN.

Commencing on Monday, 6th September, 1920.

Conducted by

HAROLD OLSSON (British-born subject), Graduate of and now Assistant Master at the Royal Central Institute of Gymnastics, Stockholm: during the War, Captain and Officer Instructor and Lecturer, Army Gymnastic Staff, Headquarters Gymnasium, Aldershot; for 3 years Teacher of Physical Training at Lundsbergs School, Sweden.

Prospectus on application to—

MARTIN OLSSON & SONS,
33 BISHOPSGATE, LONDON, E.C.2.

INTERNATIONAL GUILD,

6 RUE DE LA SORBONNE, PARIS

(Sous la direction de professeurs agrégés de l'Université de Paris),

offers to Students, especially those intending to be teachers, a sound training in the French language.

HOLIDAY COURSES

JULY, AUGUST.

Phonetics, Conversation, Translation, Dictée and Lecture Expliquée, Lectures in French History and Literature.

Weekly excursions in Paris and the surroundings arranged for students.

Hostel attached to the Guild for 20 resident women students.

GLAMORGAN COUNTY COUNCIL.

SUMMER SCHOOL AT BARRY, August 9th to September 4th, 1920.

Director—Mr. A. SUTCLIFFE.

THE FIFTEENTH ANNUAL SUMMER SCHOOL

for Educational Handwork, Art, Welsh, Nature Study, Hygiene and Physical Training for Men and Women, Plain Needlework, Art Needlework, Dress-making, Practical Geography, Gardening, Book-binding, Montessori Method, Teaching and Appreciation of Music, &c., will be held at the County Schools, Barry.

Separate camps for men and women will be arranged as last year.

Prospectus, together with application form, may be obtained from the CHIEF EDUCATION OFFICIAL, County Hall, Cardiff.

HOLIDAY COURSE IN NATURE STUDY.

A SHORT HOLIDAY COURSE

In NATURE STUDY will be held for men and women at the HORTICULTURAL COLLEGE, SWANLEY, from July 31st to August 14th.

The Course, in which field excursions play an important part, will include studies in Insect and Bird Life by Miss Hibbert-Ware, and Methods of Plant Reproduction and Propagation by Miss K. Barratt, M.Sc., and Miss L. K. Herring.

Further particulars may be obtained from the PRINCIPAL.

THE ENGLISH FOLK DANCE SOCIETY.

Hon. Director: CECIL J. SHARP.

THE SUMMER VACATION

SCHOOL of Folk Song and Dance will be held at Cheltenham from July 31st to August 28th.

For full particulars apply to—

THE SECRETARY, E.F.D.S.,
7 Sicilian House, Sicilian Avenue,
Southampton Row, W.C.1.

Kent Education Committee.

SUMMER SCHOOL FOR TEACHERS, FOLKESTONE.

August 16th to September 11th, 1920.

Principal: Mr. C. A. B. GARRETT, B.Sc.

Vice-Principal: Mr. F. H. KNOWLES.

LECTURES on the Principles of Education and Handicraft as an educational medium will be given by Professor J. J. Findlay, M.A., Ph.D.

Lectures and practical classes will be conducted by well known teachers on the following:—

Course A. Kindergarten Handwork Occupations.

Course B. Handwork for Junior Scholars.

Course C. Handwork for Senior Scholars, Woodwork, Metalwork, &c

Course D. Needlework.

Course E. Art Subjects.

Course F. Village Industries.

For full particulars as to fees, accommodation, &c., apply to Mr. C. A. B. GARRETT, Technical Institute, Folkestone.

E. SALTER DAVIES,
March, 1920. Director of Education.

ASSOCIATION FOR THE REFORM OF LATIN TEACHING.

PRESIDENT: DR. W. H. D. ROUSE, The Perse School, Cambridge.

A SUMMER SCHOOL

will be held this year at

CHESTER,

FROM AUGUST 30th—SEPTEMBER 8th.

Demonstration Classes.

Oral and Reading Practice (Groups).

Use of Picture Stories.

Lectures (and Discussion) on Aims and Methods, &c.

For fuller particulars apply to—

MR. N. O. PARRY, 4 CHURCH STREET, DURHAM.

NAVIGATION AND MARINE BIOLOGY. For particulars of short Course in August see page 265.

FOR Summer School of Speech Training, Stratford-on-Avon, see page 263.

For continuation of Summer Schools Advertisements, see page 310.

Posts Wanted—continued.

These School and Teachers' Advertisements are continued from page 267.

WELL educated French young lady, fond of children, qualified as a teacher, trained in household subjects, seeks engagement for next summer. Address—SIMON, 126 Boulevard Raspail, Paris, Vie.

FRENCH Student would like to board, during holidays, with English family, whose son or daughter would come to his own parents. Address—SIMON, 126 Boulevard Raspail, Paris, Vie.

Posts Vacant.

POSTS ABROAD.

LADY TEACHERS are earnestly advised to consult the Continental Secretary of the Girls' Friendly Society, 14 & 16 Holborn Place, Sloane Square, London, S.W.1, before accepting any post abroad. Apply by letter, enclosing stamped addressed envelope. A small charge is made for verification.

Posts Vacant—continued.

CASTLETOWN HIGH SCHOOL FOR GIRLS.—Wanted, in September, a HEAD MISTRESS. Endowed Public School. 80 pupils. 32 boarders. For particulars, apply, H. MELLOR, Esq., J.P., Beach House, Castletown, I.O.M.

PRINCESS HELENA COLLEGE, EALING.—Required RESIDENT MISTRESS, in September, to teach English and French. Honours Graduate essential. London or Cambridge preferred. Experience desirable. Good discipline essential. Churchwoman. Apply—PRINCIPAL. These advertisements are continued on p. 312.

University Correspondence College.

OCCASIONAL NOTES.

THAT war furnishes the most powerful of all stimuli to the social instinct is an approved fact of history; it sets in motion a tide of common feeling which sets strongly toward union, and either blurs or entirely sweeps away the boundary marks of division between class and class, between sect and sect, which hitherto have made common action impossible. Mr. Fisher, in his unspoken, but happily not unreported, speech, is clearly for taking this tide at the flood, with the view of putting an end once and for all to the dualism in our educational system which separates the "provided schools," as they are called, from the denominational. It would be a clear gain if it could be done. No one doubts that. It is equally clear that the present prices for building and equipment will make it increasingly hard, and in the end impossible, for the denominational schools to maintain the same standard of efficiency as the others. The standard of educational requirements is bound to rise; the revenues derived from trusts and voluntary contributions do not rise. It is not well for religion to be associated in the minds of a whole generation with relative inefficiency and backwardness in education; nor would that be fair to the children. Are we prepared to see these schools go under? If they do, are the public authorities prepared to shoulder the whole burden which will be thrown upon them? The cost of the Anglican school buildings alone is estimated at forty millions. Can local education committees who have to build new secondary schools and new continuation schools buy them out at the same time? That alternative clearly is barred out. Moreover, candid observers recognize that in these schools, which are on the average

much smaller than the others, there is a distinctive quality of atmosphere, a personal interest in the well-being of the child, and that this is worth preserving. Even sturdy Nonconformists will agree with Lord Hugh Cecil when he says: "There should be two doors to the school—the one by which the child is admitted, the other by which he passes into the Church."

It is clear that both in the interests of educational progress and of religion it would be well to find some larger synthesis in which present differences would be merged. Such a synthesis must be found by the way of agreement, and Mr. Fisher's speech does not mean that any Bill is now on the stocks or even contemplated. We shall rightly regard it as a *ballon d'essai*. It is the outcome of certain informal discussions with leaders on either side, and the object is to see how far the method of compromise therein adumbrated commends itself to the nation as a whole. Some of the old protagonists, like Lord Sheffield and Dr. Clifford, have taken down their swords and declared against any further concessions to denominationalism. That was to be expected. More important is the attitude of teachers. In their Conference at Margate they declined to commit themselves until they could get specific answers to specific questions, but unanimously they declared against the "right of entry" being applied to the Council Schools. Against imposition of tests they have Mr. Fisher's unequivocal word of promise. Teachers will also welcome Mr. Fisher's "corollary" that in future the training colleges should provide adequate facilities for training in the methods of religious instruction. The presentation of this subject has, as the result of recent criticism, become more difficult than any other.

BISHOP GORE has suggested that the whole question should be referred to local Interdenominational Councils, on which there should be representatives of the teachers, of the local education authority, and of the churches. The duty of such a Council in any place should be to draw up a course of religious instruction for the elementary schools on which all could agree, but that their function should be advisory merely, though recognized by statute. The hope is that such a Council, with teachers to guide them, would approach the whole question from the point of view, not of this or that particular denomination, but of the child. With such an approach, the great simple things on which all agree would stand out so prominently that the small things which separate would fade into insignificance. What is the difference, for instance, between Miss Hetty Lee and Mr. Archibald, the leaders in Sunday-school reform on the Church side and the Free Church side respectively? There is no doubt that such a course so arrived at would command a large and increasing measure of adherence. Only the politicians must be kept out. The matter of the fabric and the additions which will have to be made for nursery schools, the reconstruction that will be necessary for diminution of classes and continuation schools, and central or special classes, and so forth—all this may be kept separate, and left to the business men to arrange. There is a real spirit of fusion abroad, and that spirit will provide sufficient momentum to carry us over and past the obstacles which hitherto have blocked the way.

THE "Schedule" Examinations of individual children in civil public elementary schools were abandoned many years ago. They passed away without a regret on the part of anyone concerned. For

Individual Examination of Children in Army Schools.

reasons easily understood when we remember the need for "standardizing" children who may, for military reasons, be moved at any moment from one part of the world to another, the Army has hitherto retained these individual examinations; and, while Army school inspectors have busied themselves in making the records and returns familiar to H.M. Inspectors of a generation ago, Army school teachers have sedulously and sorrowfully prepared even the "infants" for individual examination in separate subjects. The system has, indeed, lingered too long, even in the Army; but it has now received its *coup de grâce* under conditions that have rapidly matured since the Armistice introduced so many novelties in the education of our soldiers and, incidentally, of their children.

THE recently issued Circular of the Board of Education on the medical inspection and treatment of pupils in secondary schools and continuation schools prescribes a complete medical examination of each pupil on entrance, at the age of twelve, and at the age of fifteen, coupled with cursory inspection annually

Medical Inspection in Secondary Schools.

throughout the period of school attendance. Provision is also required for re-inspection of those in whom defects have been found, and of any pupils whom the school staff may desire to bring to special notice. This provision will continue the practice in force in elementary schools and will unify practice throughout the country; but the actual requirements are less than the provision available in those secondary schools which had adopted medical inspection before the war, or than that which it was found possible to maintain in London even during the period of hostilities. Special attention is to be given to detecting the first signs of overstrain, whether this arise from preparation for examinations, the carrying out of homework under difficult conditions, or from other factors. Medical officers are also to work in close co-operation with teachers of physical education, with the view of securing the adaptation of the exercises to the needs of special children. Communications with parents, when these are not present at the time of inspection, are to be made through the head master or head mistress.

LAST year the Board of Education directed the attention of local education authorities to the serious shortage of candidates for the teaching profession, though, indeed, the authorities must have been well aware of the facts.

Recruits for Teaching Profession.

The Board now, in Circular 1154, outline alternative methods of preliminary education, intended to help towards the solution of the problem of recruitment. A full-time secondary-school course, up to the age of seventeen at least, is the obviously desirable arrangement, but its universal adoption is rendered impracticable, first, by the inadequacy of secondary-school accommodation, and, secondly, by the difficulty of binding children of eleven to adopt teaching as a profession. In the case of boys, it is thought that entrance to the secondary school at fourteen will go far to meet the difficulty. But, chiefly to meet the case of girls, the Board propose to revert to

the plan of pupil-teacher "centres," which may be independent or may be attached to elementary, and preferably to central, schools. The defects of the old "centres" are as far as possible to be avoided, and they are to be so organized and staffed that they may be developed into secondary schools. The Board's proposals seem to us the best that can be made in the circumstances, though we are not clear that even now a fair chance is given to children in remote country districts, whence useful material was at one time obtained. We regret, too, that the Board have not dealt with the question of the student-teacher year, the utility of which is gravely doubted by many training college authorities.

THE London County Council have decided to place at the disposal of the authorities of private schools the advice and services of the Council's Inspectors of Schools,

Inspection of Private Schools.

should they desire to qualify for a place on the Council's list of schools, supplying efficient full-time instruction for young persons between fourteen and sixteen years of age. Similarly, those who have pupils under fourteen years of age are to have similar help to qualify as schools providing suitable elementary instruction, or as preparatory schools, if they propose applying to the Board of Education for recognition. Some members of the Council proposed to make this inspection compulsory on all private schools, and that is the point that will make private-school masters regard the proposal with suspicion. They will fear that after compulsory inspection will come either entrance into the fold of the Board of Education, or that of some County Council, or gradual extinction due to non-recognition. Still another liberty of Englishmen will be engulfed by bureaucracy. It will be said of those who do not accept the Council's offer that they are inefficient as fearing inspection. But it may well be that some head masters may like to conduct their establishments in their own way, having found this way successful and remunerative. Not that many of them are so foolish as to think they have nothing to learn from experienced inspectors. But these gentlemen have prejudices like all men, and teachers who realize this show the inspector the particular things he wishes to see, and thereby they gain his approval; whereas, when his back is turned, they go on teaching in their own way. The cure for this strategy is the appointment of so large a body of inspectors that it would never be known beforehand which one was likely to inspect.

THE practice of taking parties of children to witness theatrical performances in school hours is one of the few innovations which continued to grow and flourish during the war. And now a curious legal point has been raised which gives a new turn to affairs. The L.C.C. have taken counsel's opinion on the legality of

Theatre Visits for School Children.

allowing elementary-school children to spend money on what is regarded as an integral part of their education. Can their schooling be considered free if they pay travelling fares and admission fees? Counsel's opinion is adverse: the expenditure is illegal; and, if it is made, the visit to the theatre cannot be accounted a school attendance upon which grant may be paid. So convinced, however, are the L.C.C. of the value of these visits that they have decided to continue them, and to legalize them by paying all the expenses incurred by both teachers and scholars. But they lay down certain restrictions. The

performance must be one of those organized by the London Central Shakespeare Committee, and the means and cost of travelling must conform to certain rules. No child may attend more than three times in one year, and no play must be witnessed which is not studied in school. Whether these regulations will increase the number of visits is doubtful; that they will alter the distribution of the visits is certain. There will be more from the poor schools and fewer from those in prosperous neighbourhoods. Poverty is no longer a bar to the educational advantages of seeing Shakespeare well staged and well acted.

IT was long the standing reproach of our elementary schools that they imparted to children the power to read, but did practically nothing to train them to a worthy use of that power. Hence the immense crop of trashy periodicals and booklets for children that appeared after the Act of 1870 had had time to take effect. Even now, as every teacher knows, the school does not play its proper part in cultivating a taste for sound literature, and it can never do so until the school library is placed on a better footing. We are, therefore, glad to see that the London County Council are likely to take this important question in hand. The report of a Conference formed some time ago is now in print, and it seems to us to make an admirable combination of point and brevity. It proposes that the school library should be organized in three divisions: (1) the classroom library, (2) the departmental library, and (3) the teachers' library. Of these we are glad to find that the first is regarded as fundamental, because books bearing upon the immediate work of a class should be always at hand. The departmental library should include the more expensive works of reference; whilst the teachers' library should include pedagogic works, and other books which are clearly beyond the intelligence of children, but necessary for due preparation on the part of the teacher. The suggestions made in the report concerning the types of books for children of various ages, the formation of a standing advisory committee of head and assistant teachers, and the establishment of suitable relations with public libraries, are all interesting and valuable.

THE School Teachers (Superannuation) Act, 1918, went far towards establishing for a large part of the teaching profession the retirement provision required by the whole. It is a pity that the Government, when dealing with the question, did not boldly tackle the entire problem, difficult though it is, in one venture. The piecemeal treatment of the profession tends to separate what should be unified. Of the questions which the Act has brought into prominence and left unsolved, the superannuation of university teachers is specially important and urgent. A memorandum recently issued by Prof. John Strong and Mr. A. E. Wheeler of Leeds University directs attention to the anomalies arising from the separate treatment of the schools and the universities in the matter of pensions. Transfer from one to the other is made difficult; in London the transfer of a teacher from one institution to another within the same university is impeded; a training college which forms part of a university is treated differently from a training college not in a university: the university teacher is pensioned on a less generous scale than his

colleagues in the elementary and secondary schools, and the older teachers in the universities are left with retirement benefits which are quite ridiculously small. The whole question is being vigorously discussed in the universities, both by the governing bodies and by the teachers themselves, and alternative methods of dealing with it are put forward in the memorandum to which we have referred. While refraining from comment on the relative merits of these alternatives, we would most strongly urge that whatever course of action may be decided upon—and the case for some reform seems to be unanswerable—the Government should have regard, not merely to the claims of the universities, but to the importance, in the interests of education, of a co-ordinated teaching profession, with freedom of interchange between its various branches in all parts of the United Kingdom, if not in the Commonwealth as a whole.

THE report of the Kent Education Committee, covering the period 1914–1919, is an interesting review of the work done in the county during the past five years, and indicates also some of the developments that will be necessary in order to carry out the spirit of the new Act. It is not practicable here to discuss all the chapters of the volume; it may be observed, however, that the information in each section is complete and admirably arranged. Regarding the important question of the supply of teachers, it is estimated that the number of entrants to the profession in Kent should amount to at least 400 a year. The actual number comprising bursars, pupil and student teachers for the past year was little more than one-fourth of the estimated requirement, the number having fallen from 333 in 1907 to 129 in 1919. The Committee look forward to improved prospects, due to the better salaries available and the substantial increase in the provision of pensions and disablement allowances, and also to the alterations made in the training of teachers' regulations, which aim at the breaking down of barriers between types of schools and teachers and the gradual unification of the profession. The Committee believe that the only permanent solution is to build up a profession comparable in knowledge, dignity, and opportunity with other professions. In this direction a real advance has been made of recent years. Whether it will have any effect in checking the grave falling off in the number of boys desirous of taking up teaching remains to be seen.

IN their report the Kent Education Committee observe that the fundamental problem which requires solution before a plan for educational reform can be built up is that of the unit of administration which should be adopted for the county. The success of the administration of the new Act, it is argued, must depend largely upon the degree and kind of co-operation which can be secured between the authorities for elementary and higher education. It is believed that a county such as Kent, with its varied population, industries, and diversity of character, is too large a unit for perfect and sympathetic educational control from one centre. The vitalizing and stimulating effect of personal contact is lost, for the members of the County Education Committee, however willing, cannot possibly make themselves acquainted with the multifarious needs and difficulties of the different localities. Consequently, it is proposed to establish district boards to control and co-ordinate all forms of education in a par-

ticular district. It is an interesting development, which will be watched carefully. It is doubtful whether the stimulating effect of personal contact is likely to be more of a reality under a district board than under a county authority. The functions of a local education authority are, of course, distinct from the management of schools and institutions. In one case, the question of area is not of primary importance, provided it is large enough to justify the cost of efficient administrative machinery. On the other hand, the duties of management can only be effectually associated with particular institutions.

WE are glad to hear that there is an acute shortage of those resident governesses who were once to be found in every great country house. They used to

**The Family
Governess.**

lead the loneliest of lives; for their position was as anomalous as that of Mahomet's coffin. They were regarded as the inferiors of the masters and they thought themselves superior to the servants. So they had no one to speak to but their charges, who often treated them with ill-disguised contempt. The idea of such resident governesses is entirely false. No woman, however talented, is able to teach all the subjects that girls of fifteen or sixteen should learn; and the girls grow up ignorant and contemptuous of learning. These girls often become the wives of our rulers whom they occasionally rule; as Mr. Wells brings out in "Mr. Britling." There is thus great danger to the State. The whole position is due to the snobbishness inherent in the British mind. The daughters of these peers and plutocrats (no longer interchangeable terms) are thought too precious to mix with the common herd. They miss all the joy of communal life, and their minds are narrowed, for they meet only those who think in one way. Instead of knowing something of mathematics and natural science, like girls who have been at efficient secondary schools, most of their time has been given to oral French and German (excellent in its way), singing, piano practice, dancing, and some sketchy history and geography. Those who have to correspond with ladies of title know how shaky is their spelling and how illegible their writing. These faults are not due to the governess so much as to the mother, who, brought up on the same bad lines, has no use for education, and on the slightest excuse allows her daughters to adorn their persons rather than their minds. We hope it will soon become the fashion for all girls of the upper classes to attend schools. If exclusiveness is needed, why cannot the newly enfranchised start more "public" schools.

THE CONSTRUCTION OF THE TIME-TABLE.

WHY I should have had the honour of a visit from so many distinguished people may seem to those who know me a mystery, but I can only report the conversation of my visitors, the suggestions they offered for my help and guidance, so that others less fortunate may profit by my experience.

I was engaged at the time in the usual holiday amusement of preparing the time-table for the next term, assigning to the various subjects their due number of hours, and to my various colleagues the classes they expected, and endeavouring to avoid any arrangement too burdensome to myself. My first visitor

wore so benevolent an expression, his bald head was so beautifully polished, and through his gold-rimmed spectacles shone a pair of such limpid blue eyes that I welcomed him with a friendly bow in spite of the interruption to my work. "You will," he said, "at once excuse my intrusion, I am sure, when you know my errand. I am an entomologist. The importance of the science I profess need not be pointed out to you, an educated man, but I might perhaps say that the discoveries of recent years due to this science, and the value of the measures it has enabled us to adopt to combat various diseases, cannot be exaggerated. There are, however, whole worlds to conquer; entomologists will be required in large numbers; early training in the right direction is essential; in short, I wish you to introduce the subject at once into your school curriculum. It is useless to play with the matter: a sound foundation must be laid, and for this you should devote not less than three hours per week." So convincing were his arguments that I could not but agree with his conclusions, and before he left he had extracted from me a promise to comply with his request.

I had scarcely resumed my struggle with the time-table, now still further complicated, when the second visitor was shown in. "I can see you are busy," he said, "so I will not waste time. You may have heard of me: I am a professor of astronomy. You cannot be ignorant of what the modern world owes to that science—navigation, the prediction of celestial phenomena, deliverance from superstitious fears, an appreciation of the infinite littleness of man, yet, at the same time, of the might of human intelligence that has known how to fathom such mysteries. What more inspiring subject for the young?" "Indeed it is," I said; "so completely do I agree with you that we already devote one hour a week to the first elements." "One hour," he scoffed, "one hour! Make it four at least; you will then be able to make a start if you continue thus throughout the school course." "I will do it," I said. "Thank you," he replied; "I won't take up more of your time, as I notice you have several more visitors to-day."

I was not aware of it, but the moment the astronomer left there entered a middle-aged person dressed in a loose-fitting suit, with a soft collar and a tie that seemed to be made out of a black silk handkerchief. He wore his greyish hair long, and had a shaggy beard which he stroked affectionately as he spoke. "I know you from your photographs in the papers," I said, "and I read with pleasure much of what you write, particularly when occasional leisure permits me to indulge in dreams of fancy." He seemed slightly surprised at my words, but said: "I know what you are doing, and I hope I have arrived in time. The subject I have made my own is one of vast importance; the reconstruction which must now take place may easily be based on faulty foundations; it is essential that not only the leaders should understand the principles of political economy, but that the workers themselves should appreciate what their true aims should be. Popular fallacies teem around us." "True," I said; "but what can I do in the matter?" "Put it in your time-table, three or four hours a week—a small allowance out of so many, especially in view of the fact that you live in the midst of a business community, where such knowledge is essential." "I will do it at once," I said. "You are a true friend of education," he replied; "and now, as I have several other calls to make, I will not detain you longer."

Scarcely had the professor left when the next visitor took his place. He was indeed a contrast to the last: short iron-grey hair, a clean-shaven face, a countenance alert which indicated quick senses rather than profound intellect, a well-cut suit of clothes, and boots brightly polished. "I've come to see you about my boy," he began; "he has to follow me in my business, and he must understand book-keeping. I'm a business man; you schoolmasters deal, so to speak, in luxuries—Latin, Greek, higher mathematics—useless in my business; but I wanted the boy to have some culture, and now he's really fifteen he must get on to something real. Can you give him book-keeping instead of Latin and mathematics?"

"It is a little difficult," I said, "but I am engaged on a time-

table, and I will see what can be done. We haven't a regular class in book-keeping, and, as we have four hundred boys and only eighteen masters, individual tuition is a little difficult to arrange."

"Well," he said, "he'll be leaving in a month or two, and I do want him to learn something real. Good-bye."

"There's a lady to see you, sir," said the porter, "the lady who called to see the late head master."

"Show her in," I murmured; "time-tables can wait a little."

The newcomer was tall, with thin features, and an expression almost amounting to grimness. She carried a small bag, from which she drew a bundle of pamphlets. "It is to save postage," she said. "Would you be so good as to distribute these to the members of your staff, and may I have a word with you? I am the Secretary of the Society for the Abolition of Corporal Punishment. Its degrading effects, its brutalizing tendencies are without doubt known to you, but you may not have given close thought to its real nature. It is, of course, torture; in a modified form, perhaps, but still torture."

"It is, madam," I said.

"Ah, then, I am preaching to the converted. Doubtless you have abolished it in your school, and my visit is unnecessary."

"Well, madam, it is rare in this school, but not entirely unknown. There are cases when— May I ask if you have children of your own?" My visitor's countenance assumed a pained look, and, glancing at her card, which lay on the table, I noticed the name Miss —.

Hastening to cover up my mistake, I assured her that her pamphlet should receive careful consideration, and she withdrew.

But another caller succeeded her. "I see," said the newcomer, "that I shall meet with sympathy from you. You have certificates instead of prizes, a mere acknowledgment of work well done rather than a gross reward, the laurel-wreath of victory, not the bonus of the professional."

"The reason for the certificates, my dear lady," I began.

But she was not to be interrupted. "How beautiful to work for work's sake! If one could but abolish rewards and punishments altogether and unite in the loving pursuit of knowledge! Our education is too vocational; we try to fit boys for their allotted tasks rather than to develop their souls. But the best of teachers are needed for such work as that, men whose energies should not be wasted in endeavours to live on scanty pay. Salaries must be raised; you must get the best men and women for your work."

"True, madam; but you spoke, I think, of abolishing rewards. Perhaps you referred to the pupils?"

"The desire for knowledge," she went on, "is implanted in the young. They must not be bored or dulled by contact with stupid minds, not punished for the display of their natural impulses, but allowed to develop, not cramped too much by time-tables"—there seemed a likelihood that my school, at least, would not suffer in this respect, but I let that pass—"not made too uniform. Unpunctuality, for example, is often but a temporary failure to gauge correctly one's powers of walking, there is something noble in the character that will stake all on the difference of a second." At this moment the clock struck, and my visitor, rising in haste, said, "Pardon me, but I must go; my train . . ."

"Another gentleman to see you, sir," said the porter; "he says he has an appointment." A young man entered carrying a bag from which he drew an illustrated prospectus. "I had your letter, sir," he said. "I represent Thoughts, Ltd.; we have just opened a new department, and we undertake to make time-tables if you give us the data."

"This sounds interesting," I said, "my own time-table has undergone several changes, and I have received some valuable suggestions which I should like to incorporate in it. See what you can make of it."

"Give us the figures," he said, "number of hours, number of masters, number of subjects, and we will complete it and you shall have it in three days." The offer was so tempting that I at once fell in with it. "Here are the data," I said.

"Take a look at them." He did so. "You've allotted, I suppose, the number of hours to each subject," he said. "How many hours for entomology, what time for astronomy, what time for political economy, what time, what time?" . . .

"What time are you going to get up?" said my wife. "Your train goes at eight and it's seven-thirty now; you must go to bed earlier and give up working after dinner."

"No," I said, "but I will give up something; I'll give up attending educational conferences and take to golf."

J. M.

LONDON EDUCATION DURING THE WAR.*

THE part of the Annual Report of the London County Council relating to education is a document of deep and poignant interest, covering, as it does, the fateful period between 1915 and 1919. When the war broke out, London education had been in the Council's hands for just ten years, and the Council's educational work was "in full swing." The Report of the University of London Commission had been issued and called for careful consideration, the provision of secondary schools was being proceeded with, and a scheme was at work for reducing the size of classes in the elementary schools. Then fell the thunderbolt of war, and "the course of progress was automatically arrested." On the morning of August 12 the 650,000 children and their teachers were back at work in the schools, and the writer of the report has no doubt that this measure had a steadying influence on the population. But a far more serious call awaited the men teachers. More than half of the total of six thousand eventually joined the Forces; more than 10 per cent. gave their lives; others have returned to their schools with the loss of a limb or an eye; whilst over two hundred are known to have won military distinctions. A fine record, indeed!

The instruction given in the schools, especially in geography and history, was naturally influenced a good deal by current events, and did not follow the normal course. A significant exception was that of the air-raided districts, where the teachers in many cases found that the nervous strain was relieved by a general withdrawal of attention from the war so far as that was possible. Comparatively little damage was done or alarm created by the night visits of Zeppelins; it was the daylight visits of aeroplanes, and in particular the terrible disaster at a school in Poplar on the morning of June 13, 1917, that made London realize that its children were in the war zone.

Though the absence of over three thousand teachers could not but have a bad effect on the usual work of education, the activities of the schools were in some respects stimulated by war conditions. "How can we help in the war?" was the question asked everywhere by the children, and in due course every school became a centre from which help was organized for the men at the front, for the men in hospital, and for the war refugees. With one exception, all this work was local. The striking exception was that a sum of £4,000 was collected in the schools for the purchase of clothing material, which was made up in the girls' schools, with the result that 10,000 kits were sent to the peasant children of Belgium and Serbia.

An interesting chapter of the Report tells of the war work done in the colleges and technical institutes. Of course, much of this work, especially in the greater colleges, took the unobtrusive, but effective, form of scientific research upon specific problems submitted by the naval and military authorities. As regards actual output of war material, the technical institutes rendered service of untold value in the manufacture of gauges, a task which was marked out for them both by the nature of their workshop resources and by the delicacy of the processes involved. The Report makes special mention of the engineering departments of Goldsmiths' College and of Paddington Technical Institute as having won high distinction as centres of these operations.

The Report closes on a hopeful note. The war has stimu-

* Annual Report of the London County Council. Vol. IV: Education. (P. S. King & Son.)

lated the nation into taking education seriously, and it has stimulated teachers and administrators into casting about for the best ways and means of carrying the nation's wishes into effect. Let us hope that, as a nation, we shall keep our heads, and secure that the war, though a disaster, was, at any rate, not an unmitigated disaster.

PERSONAL PARAGRAPHS.

INCLUDED in the recent list of promotions in and appointments to the Civil Division of the Order of the British Empire will be found the following associated with education:—

Knight Grand Cross (G.B.E.): Dr. Arthur Everett Shipley, F.R.S., Vice-Chancellor of Cambridge University.

Knights Commanders (K.B.E.): Prof. I. Bayley Balfour, F.R.S., Professor of Botany, University of Edinburgh; Prof. W. H. Bragg, F.R.S., Quain Professor of Physics, University College, London; Prof. C. W. C. Oman, M.P., Chichele Professor of Modern History, Oxford University.

Commanders (C.B.E.): Prof. H. L. Callendar, F.R.S., Professor of Physics, Imperial College of Science, London; Prof. F. G. Donnan, F.R.S., Professor of General Chemistry, University College, London; Prof. Percy F. Frankland, F.R.S., Emeritus Professor of Chemistry, Birmingham University; Prof. W. A. Herdman, F.R.S., Professor of Oceanography, University of Liverpool; Prof. J. C. Irvine, F.R.S., Professor of Chemistry, University of St. Andrews; Dr. T. M. Lowry, F.R.S., Lecturer on Chemistry, Guy's Hospital; and F. Wilkinson, Director of Education, Bolton.

Officer (O.B.E.): W. A. Bulkeley-Evans, hon. secretary and treasurer of the Public Schools Hospitals Fund of the British Red Cross Society.

THE appointments to the Order of the British Empire of Mr. W. A. Bulkeley-Evans and Mr. F. Wilkinson will be of special interest to the public schools and technical institutions respectively. Mr. Wilkinson has been hon. secretary of the Association of Technical Institutions since 1912 and Director of Education for Bolton since 1903, prior to which he was Director of the Bolton Municipal Technical School. Mr. W. A. Bulkeley-Evans is secretary to the Head Masters' Conference.

THE HON. W. N. BRUCE, C.B., has been appointed to be Second Secretary in the Board of Education.

THE REV. DR. G. H. COOKE, head master of Aldenham School since 1900, is resigning at the end of the present term to take up the living of Mapledurham, in the gift of Eton. Dr. Cooke is an old Etonian, becoming Newcastle Scholar in 1874. As a student at King's College, Cambridge, he passed through a brilliant career, being successively Browne's Medallist, Powis Medallist, Craven University Scholar, Senior Classic in 1878, and Fellow 1879. He was then appointed Lecturer at King's College, holding office as Dean for four years and Tutor for seven. During his tenure at King's he was also University Curator in Zoology for some ten years. Dr. Cooke has taken a keen interest in the administration of education in Hertfordshire, and he is the author of several Greek texts.

DR. COOKE is to be succeeded at Aldenham by Mr. Harvey Mortimer Beck, who has been, except for a brief period, an assistant master at Aldenham since 1893. Mr. Beck is an old Etonian and a scholar of King's College, Cambridge. He obtained First Class Classical Tripos in 1890, and prior to his appointment at Aldenham was an assistant at Loretto School.

THE death of Mr. Owen Owen, formerly Chief Inspector of the Central Welsh Board, has removed a famous pioneer of Welsh education. During the first twenty years of the Intermediate School System, Mr. Owen acted as chief educational

adviser to the Board, and the characteristics of Welsh Intermediate Education must be attributed mainly to his foresight, advice, and capable organization. He has earned the great admiration and deep approbation of Welsh teachers by his life's work, and his name will always occupy a prominent position in the history of Welsh education.

MR. CLEMENT WEBB, Fellow of Magdalen, who is to be the first occupant of the new chair of Christian Philosophy founded by Dr. Nolloth at Oxford, is a younger son of Prebendary Webb, a late vicar of St. Andrew's, Well Street. He is also a grandson of Dr. Mill, whose work on "The Mythical Interpretation of the Gospels" is still a standard authority. Mr. Webb was educated at Westminster School and Christ Church College, and will now become an *ex officio* Fellow of Oriel College.

IT is announced that the Coalition Unionist prospective candidate for the Windsor division at the next General Election will be Mr. A. A. Somerville, of Eton College. Mr. Somerville has had more than thirty-two years' experience in teaching at Wellington and Eton, and was a house master for some fifteen years. He has been for long a prominent and active worker in education. He was one of the prime movers in the inception of the Endowed Schools (Masters) Act, 1908, and the establishment of the Teachers Registration Council, the success of these measures being largely due to his personal influence and knowledge of educational matters. He has been chosen president of the Assistant Masters' Association on three occasions—1907, 1911, and 1916; and is a governor of the Imperial Service College, and a member of the Teachers Registration Council, the Secondary Schools Examination Council, and the Federal Council of Secondary Schools Association.

MR. W. G. CRAIB, who has recently been appointed by the Crown to the Regius Professorship of Botany in Aberdeen University, which was rendered vacant by the regrettable death of Prof. Trail, has had a long and varied experience with the botany of India. Formerly superintendent of the Calcutta Botanic Gardens, he became an assistant at Kew, and lately has been lecturing on Indian forestry under Prof. Balfour at Edinburgh.

MR. R. S. KINDERSLEY is retiring from his position as assistant master at Eton, after thirty years' strenuous work. An old pupil of Clifton College and an Exhibitioner of Exeter College, Oxford, he graduated with Second Class Classical Mods. in 1879, and Third Class Lit. Hum., 1881. He was appointed at Eton after six years' service at Radley College. He has been a well-known rowing man, and an International Rugby player at Eton; he has taken a great interest in both forms of sport, and for several years coached the Rugby fifteen. For some years Mr. Kindersley has been in residence at "The Timbralls."

THE Northamptonshire Education Committee have appointed Miss Annie P. Martin to the head mistressship of the County High School, Brackley. Miss Martin was formerly head mistress of the Tollington High School, Muswell Hill.

MISS ETHEL HUTCHINGS, of the Aske's Hatcham Girls' School, has been appointed head mistress of the Barnett School, Hampstead Garden Suburb.

THE death of Mr. F. H. Rawlins, Vice-Provost of Eton since 1916, will be deeply regretted by all old Etonians. Mr. Rawlins entered Eton as a collegier in 1862, and his school career was one of uninterrupted success. He was Newcastle Medallist in 1869 and Scholar in 1870, when he entered King's College as an Eton scholar, and, after being Browne Medallist for three successive years, was bracketed with Dr. Walter Leaf as Senior Classic and for the Chancellor's

RECENT AND STANDARD TEXTBOOKS

HISTORY.

Ladder in History. By GEORGE GUEST, J.P., B.A., Head Master of St. Paul's School, Bournemouth.

The first six volumes of Bell's "Ladder in History" aim at presenting an Elementary Course in British History suitable for all the classes of Primary Schools, and for the Lower and Middle Forms of Secondary Schools.

Book I. **Heroes of the Homeland.** With numerous illustrations in colour and black and white. 1s. 8d.

Book II. **Great Leaders in History.** With numerous illustrations in colour and black and white. 2s.

Book III. **Changes in Social Life.** 2s. 4d.

Book IV. **An Imperial History of England.** 2s. 6d.

Book V. **A Social History of England.** 2s. 6d.

Book VI. **A Constitutional History of England.** 2s. 6d.

New Editions of the three last books are in active preparation, bringing them up to the inclusion of the Treaty of Versailles.

English History Source-Books. Edited by S. E. WINHOLT, M.A., Christ's Hospital, Horsham, and KENNETH BELL, M.A., Fellow of All Souls' College, Oxford. **Now complete in 17 volumes.** 2s. net each.

ALSO **A Source-Book of London History.** By P. MEADOWS, M.A. 2s. net.

Canada, 1535-1913. By JAMES MUNRO, M.A. 2s. net.

Scottish History Source-Books. 2s. net each.

1637-1688. **The Scottish Covenanters.**

1689-1746. **The Jacobite Rebellions.**

The Expansion of British India. A Source-Book of Indian History. By G. ANDERSON, M.A., Prof. of History, Elphinstone College, Bombay, and M. SUBEDAR, B.A., B.Sc. (Econ.), Professor of Political Economy, University of Calcutta. 4s. 6d.

Being Volume I of a new series covering the Expansion of British India, 1818-1858.

"The extracts are well chosen, the comments are sober and judicious, as well as genuinely explanatory. Indeed, we have rarely seen a book of the kind so well done."—*English Historical Review*.

G. BELL & SONS, Ltd., York House, Portugal St., W.C.2.

Medals. He was elected a Fellow of King's in 1875, and in the same year returned to Eton as an assistant master. In 1895 he accepted the Lower Mastership, and in 1916 gave up teaching on being appointed Vice-Provost. Mr. Rawlins was a fine classical scholar and an admirable teacher. He will be especially remembered as a man who was devoted to the service of the school, abilities which would have gained him prominence in other walks of life.

* * *

THE death is reported of Prof. Lapworth, the eminent geologist, who was for many years a member of the staff of Mason's College and afterwards of Birmingham University. Prof. Lapworth began his teaching career at Galashiels, where he first studied geology. In 1870 he was appointed on the staff of St. Andrews University, where he remained until he went to Birmingham. Under his leadership, the chair of geology at Birmingham became famous, and on his retirement in 1913 the council of the university passed a resolution recording the fact that the geological surveys of the Empire owed some of their methods to the genius of Prof. Lapworth, whose name was of more than European reputation. ONLOOKER.

TOPICS AND EVENTS.

VACATION TERM FOR BIBLICAL STUDY.—The Eighteenth Vacation Term for Biblical Study will be held this year at Oxford, from July 31 to August 14. The inaugural address will be given by the Rev. Dr. W. Lock, Lady Margaret Professor of Divinity, on "The Bible." The following courses of lectures have been promised:—First week: "The Book of Genesis," by the Rev. Dr. G. W. Wade, and "The Roman Empire in the First Century," by Miss Alice Gardner. Second week: "The Epistle to the Romans," by the Rev. R. G. Parsons, and "The Doctrine of Free Will in the Bible and in Christian Theology," by the Rev. Dr. H. Maurice Relton. Lectures have also been promised by the Rev. Dr. G. Gray, the Rev. R. H. Lightfoot, and the Rev. Dr. C. F. Nolloth. Hebrew and Greek Testament readings will be held throughout the term. Further particulars may be obtained on application to Miss Elizabeth Lawder, Secretary, 25 Halifax Road, Cambridge.

SHORT COURSES OF INSTRUCTION FOR TEACHERS IN SECONDARY SCHOOLS, 1920.—The Board of Education have made arrangements for a number of short courses of instruction for teachers in secondary schools, which will be held in the summer. Admission to these courses will be open to teachers who are employed in secondary schools recognized by the Board as efficient, and some places will also be available for teachers employed in training colleges recognized under the regulations for the training of teachers. The courses for which preliminary arrangements are now in progress are as follows:—At Oxford—English, history, geography, and Latin (for women only); at Cambridge—English (for women only), botany, scripture, and mathematics; at Durham—French, geography, mathematics, and history; at London—French (for women only), music, and drawing; and at other centres to be arranged—physics and chemistry. Teachers who desire to attend any of these courses must obtain a form of application from the head of their school or college, and send it in duly completed to the Secretary, Board of Education, before May 15, 1920. The courses will probably commence on July 30, with the exception of the music, Cambridge English, and London French courses, which will commence on August 16, 19, and 24 respectively.

YORKSHIRE SUMMER SCHOOL OF GEOGRAPHY.—The headquarters of the Yorkshire Summer School of Geography will this year be the County School, Whitby. The object of the school is to provide theoretical and practical instruction in the methods of geography, and to furnish opportunities for the discussion of problems connected with the teaching of the subject. Yorkshire, which is sufficiently diversified in structure and in historical and economic development to provide students with many types of geographical problems, has been chosen as the special subject of the course. The course will consist of lectures, laboratory work, field work, and demonstrations. Lectures will begin on August 2, and the course will end on August 21. The laboratory work will include map-reading, methods of map-enlargement and the making of relief maps. The field-work will comprise plane-table and contour work. Methods applicable to school work will be adopted. The staff of teachers will be large, in order that in laboratory work the students

may receive individual attention. Among the lecturers will be Prof. Kendall (Professor of Geology in the University of Leeds), Dr. A. Gilligan (Lecturer in Economic Geology), Mr. C. B. Fawcett (Lecturer in Geography), and Mr. W. P. Welpton (Lecturer in Education in the University of Leeds). The charge for admission to the course of instruction is £3. 3s. Applications for tickets should be made, with remittance, to the Secretary of the Yorkshire Summer School of Geography, The University, Leeds.

INFORMATION RESPECTING PRIVATE SCHOOLS.—The Board of Education direct the attention of head masters, head mistresses, governing bodies, and proprietors of schools and educational institutions to their duty, under the Education Act 1918, to furnish to the Board the name and address and a short description of the school or institution. Those private-school authorities who have not yet supplied the prescribed information should at once apply for a copy of the prescribed form (Form 451 G) to Board of Education, South Kensington, London, S.W.7, to which address it should be returned not later than May 15, 1920, after being duly filled in.

LEAGUE OF NATIONS UNION.—The League of Nations Union have arranged a Prize Essay Contest, in co-operation with the American School Citizenship League, and it is open to both English and American schools. Prizes of £15, £10, £5, to be known as Seabury Prizes, are offered for the best essay on the following subject: "The most effective Method of Securing Co-operation as against Competition between Nations." The competition is open to all pupils under eighteen years of age on June 21, 1920, attending any educational institution. Essays must reach League of Nations Union, 22 Buckingham Gate, S.W.1, not later than June 21, 1920. Essays must not exceed 5,000 words, and must be written on one side only of the paper. They should have the writer's name and school and home address. Essays should be sent to and all inquiries made from the Education Section of the League.

FOOD EDUCATION SOCIETY.—This society, formerly known as the National Food Reform Association, is arranging a United Kingdom Conference on the Prevention of Diseases of the Teeth, at the Albert Hall, Manchester, from May 13 to 15 next. A large attendance of members of local authorities, medical and dental practitioners, nurses, educationists, heads of schools and other institutions for children, adolescents, and adults, and of social workers, is anticipated. The subject will be treated in a popular rather than a technical manner. Applications for tickets should be made to the Hon. Secretary, at Danes Inn House, 265 Strand, London, W.C.2.

PHYSICAL AND MENTAL DEVELOPMENT.—In their draft consolidated regulations relating to the special services of elementary education (other than nursery schools) for promoting the healthy physical and mental development of children, the Board of Education have brought within the scope of a single publication their various regulations which deal with (a) medical inspection and treatment of children attending public elementary schools; (b) provision of meals; (c) schools for blind, deaf, defective, and epileptic children; (d) organization and supervision of physical training in public elementary schools; (e) evening play centres. The expenditure of local education authorities on all these special services is now taken into account in determining the single grant payable under the Board's regulations for the substantive grant for elementary education. The issue of this single volume of regulations has a wider significance. The Education Act, 1918, and the Ministry of Health Act, 1919, both embody in different ways the important principle that measures, whether local or central, for promoting the healthy physical and mental development of children and of the population generally, must, if they are to be truly effective, be closely co-ordinated and their development promoted under the stimulus of a common policy. The Education Act, 1918, also emphasizes the essential interdependence of mental and physical welfare. The services dealt with in these regulations each have their contribution to make towards promoting the healthy physical and mental development of the school population, and in their administration their close interrelationship needs constantly to be recognized.

LIBRARY FOR DEAF EDUCATION.—In connexion with the Ellis Llwyd Jones Lectureship for Training Teachers of the Deaf, recently established at the University of Manchester through the benefaction of Sir James E. Jones, the Carnegie United Kingdom Trust has granted to the University the sum of £2,500 for the

T. Nos., Central 621 and 12030.

foundation, and maintenance of a Library for Deaf Education. It is intended to make this library as comprehensive as possible, and to include in it works dealing with the various systems of teaching the deaf, speech training, psychology of speech and of hearing, phonetics, acoustics, anatomy, physiology, and diseases of the ear. The books are to be available to all individuals, societies, and institutions throughout the United Kingdom interested or concerned in the education and training of the deaf, and they are now ready for consultation and borrowing. No charge, beyond the cost of carriage, is made for the loan of books, but intending borrowers are required to fill in a form of application, to be obtained from the Librarian, Library for Deaf Education, The University, Manchester.

COLLEGE OF TEACHERS OF THE BLIND.—This college was established thirteen years ago, under the presidency of the Duke of Portland, to promote the training of teachers of the blind, to raise their status, render them more efficient, and at the same time to heighten the tone and character of the instruction of the blind generally by thorough examination of their teachers on a special course, and by a fully accredited body. 167 candidates have been examined and certified since the foundation of the college, and at the last examination eleven candidates took the diploma with honours. Practically all teachers are eligible to sit for examination, and the subjects include theoretical and practical knowledge of Braille, arithmetic for the blind, the practice and theory of education as applied to the blind, together with one other subject, to be selected by the candidate from a list ranging from infant teaching to typewriting, Braille shorthand, woodwork, &c. It is probable that some teachers may like to join the ranks of certified teachers of the blind, and it would be advisable for these to pay a visit to a local school for the blind, where they could gain a good idea of the special methods adopted by teachers of the blind. Such teachers should communicate with the honorary registrar, College of Teachers of the Blind, c.o. National Institute for the Blind, 224-6-8 Great Portland Street, London, W.1, from whom full particulars and a syllabus of examination can be obtained.

FOREIGN AND DOMINION NOTES.

FRANCE.

We ask forgiveness if we refer to ancient history. In August 1918, there was placed on the Statute Book an Act, to be cited as "The Education Act, 1918," which professed to aim at "the establishment of a national system of public education." For such a system the important element to be supplied was the continuation school. Kings have fallen since then, the governance of vast regions has been transferred, there have been revolutions and far-reaching economic changes, but *not a single continuation school has been established under the Act*. It is true that the local education authority of London is moving; but, whereas the people looked to the Board of Education to give impetus to continuation, the Board stand inert and flabby, and murmur feebly, "Push me on!" The issue in England is: Shall the Board of Education be allowed still to await impulse after having been for nearly two years enabled to impart it? France is alive to the importance of continuation and, as we have related, the Viviani Continuation Bill is to be revived as the Dessoye Bill. Private initiative in some districts is anticipating State action. Thus at Mayenne, thanks to co-operation between the Municipality and the heads of industry in the town, there have been organized since November, 1919, *cours d'apprentis* for boys and girls. These courses are compulsory, an attendance book being signed both by the teacher and by the foreman of the works. Every Saturday afternoon from 1 o'clock to 4—the hours being in their working day—the "young persons" are at school. The boys, employed mostly in machinery works, receive instruction distributed thus:—General education, 30 minutes a session; drawing, 1 hour 30 minutes; technology, 40 minutes; arithmetic, geometry, or book-keeping, 20 minutes. The girls, many coming from printing works, are taught, in particular, orthography, the use of capitals, and how to read manuscript. What France can do sporadically, England could do universally, if only there were time-sense and propulsive energy in Whitehall. The President of the Board of Education talks little now of con-

By J. E. MANSION, B. ès L. An Excellent Selection. New Edition. Cloth Boards, 2s. 6d.

EXTRAITS DES AUTEURS FRANÇAIS DU XVII^{ME} SIECLE

By J. E. MANSION, B. ès L. 288 pages. Cloth Boards, 3s.

MCDUGALL'S PREPARATORY FRENCH

An easy, pleasant introduction. Cloth, 1s.

FABLIAUX FRANÇAIS

A simple attractive Illustrated Reader. Cloth boards, 2s.

GATEWAYS TO BOOKLAND

A series of delightfully Illustrated Literature Books for pupils of from 9 to 14. A very wide range of authors of all periods is drawn upon.

Winged Flights into Story Land 2s. 4d. *Within the Gates* 3s. *Vistas of Romance* 2s. 9d. *In Kings' Gardens* 3s.

REGIONAL GEOGRAPHY OF THE WORLD—1920 EDITION

A Modern Scientific Treatment. Contains an abundance of Contour Maps in Colour and Black and White, with many Diagrams. A section of questions based on the text is a very valuable feature. 224 pages. Cloth covers, 2s. 6d. net.

PLAIN-TEXT SHAKESPEARE

In this edition of English Classics is given the greater plays of Shakespeare, unabridged but carefully edited for schools, and without notes. The books are full crown 8vo in size, most clearly printed, and bound in limp cloth. Price—each 7d. net, except *Hamlet* and *Coriolanus* (each 10d. net), and *Richard II* and *King Henry V* (each 9d. net).

SONGS OLD AND NEW

Contains 9 National, 19 British, 5 New Folk, 8 Classical Songs, 4 Gleees, 19 Rounds. In Staff or Sol-Fa. Paper, 7d.; Cloth, 9d. Piano Edition, 6s. net; by post, 6s. 6d.

MODERN TIMES

The Empire and the World since 1789. The most important epoch in History for the people of to-day. A positively brilliant book. Cloth Boards, 2s. 6d. net.

COMPLETE HISTORICAL READER

The Matchless Story of Britain from 55 B.C. to 1920. Delightfully told. Illustrated. Cloth Boards, 3s. 6d.

OUTLINE OF BRITISH HISTORY

History in a Nutshell from 55 B.C. to 1920. 80 pages. Paper, 7d. Cloth, 9d.

THE NEIGHBOURS OF BRITAIN

A Geographical Reader of Europe as it is in 1920. History throughout correlated with Geography. Many Coloured Plates. Cloth Boards, 2s. 6d.

ADDRESS YOUR INQUIRIES TO

MCDUGALL'S EDUCATIONAL Co., Ltd.,

8 Farrington Avenue, London, E.C.4.

J. M. Dent's New Books.

Two New Books by Dr. Richard Wilson, B.A.

The Complete Citizen.

Crown 8vo. With 16 Coloured Plates and numerous Black and White Illustrations. **2s. 6d.** net.

This new volume is designed to form a Citizen Reader for Middle Forms, Central Schools, and Continuation Schools. *Education*.—"This little book is quite the best introduction to the study of civics which we have seen. It is written in a style that grips the reader by its sheer simplicity."

Servants of the People.

A Book of Biographies for Very Young Citizens Illustrated. **2s.** net.

This book is designed to form a preparation for the study of citizenship, based upon history, literature, and the interests of daily life. It can be used as a general history reader, neither too military nor too political for pupils of ten to twelve years of age.

Home and School Exercises in Composition through Reading.

By F. PICKLES, M.A., and J. E. PICKLES, M.A., B.Sc. PART I. **1s. 3d.** net.

Whilst the books are designed for the special needs of pupils in the new Central and Day Continuation Schools and Lower Forms of Secondary Schools, they should also meet the requirements of all pupils who begin the intensive study of English at about the age of twelve. Although these books are complete in themselves, they are meant to lead up to and supplement the larger works entitled:—

Composition through Reading.

The Direct Method of Teaching English. Each volume a Reading Book and a Manual of Composition in one.

By F. PICKLES, M.A.

Book I. For Middle Forms and Continuation Schools, **2s. 3d.** Book II. For Senior Forms and Matriculation Students, **2s. 9d.**

A New Volume in Professor Ripman's Series.

Continuation School French.

By RANDALL WILLIAMS and WALTER RIPMAN, M.A. **2s. 6d.** net.

This new book is designed for all pupils who are beginning French at a later age than is usual in Secondary Schools, and is therefore more advanced in method and vocabulary than the usual French Course.

By the same Authors.

A Rapid French Course.

Illustrated by HERBERT COLE. Crown 8vo. **3s.** net.

This book forms an excellent "follow on" to the above, and is already in use in a large number of Evening Schools and Institutes.

The Temple Poetry Books.

A New Graduated Series of Poetical Selections, ranging from the Nursery Rhyme to Shakespeare and Milton, and including also short Rhythmical Prose Passages. Each with Four Coloured Plates. Paper, **7d.** each. Cloth, **9d.** each.

Book I.—Nursery Numbers. Book II.—Poets at Play. Book III.—The Fairy Harper. Book IV.—Stories and Song.
Book V.—The Land We Love. Book VI.—Verses Old and New. Book VII.—The Laurel Crown.
Book VIII.—Shakespeare and Milton.

A First and Second Cha-book of Rounds.

By ELEANOR FARJEON. Music by H. FARJEON, Paper, F'cap. Each **1s.** net.

Two series of charming rounds, sixteen to each book, so rhythmic and catching that they need no memorizing.

Books for Teachers.

THE NURSERY SCHOOL.

By MARGARET McMILLAN. Cloth. **7s. 6d.** net.

The Times.—"With a Christlike love and persistence she gathers the trampled flowers of childhood out of the gutter and nurses them to life in the oasis of East-end slumdom."

The Journal of Education.—"Another Pestalozzi operating amid twentieth century conditions in a poor quarter of London."

Self-Health as a Habit.

By EUSTACE MILES, M.A. **5s.** net.

Daily Telegraph.—"Abounds in prudent precepts for those who desire to preserve the vigour of youth."

Shakespeare for Community Players.

By ROY MITCHELL. **6s.** net.

A very practical handbook dealing with the amateur presentation of scenes from Shakespeare, with full notes on staging and costume, and many helpful drawings. It should be in the hands of all those interested in amateur theatricals.

J. M. DENT & SONS, Ltd., Aldine House, Bedford Street, W.C.2.

tinuation, but much of "a broad path from the elementary school to the university." We would not narrow that path by an inch. But Mr. Fisher must know, as well as we know, that the just breadth of it depends on the number of wayfarers who are capable of profiting by what is offered at the end of the journey. We want provision for those cast out on the way.

The *Bulletin* of the Ministry of Public Instruction, being concerned chiefly with administration, does not pretend to be witty or even vivacious. But the latest issue (No. 2415) that we have received contains matter of some general interest. A circular bade teachers remind their classes on March 13 that this is the centenary year of the publication of Lamartine's "Premières Méditations poétiques." "The opening of one of the most fertile and glorious periods of French literature and art, the reawakening of public sensibility, the appearance of a great idealist whose influence was to run through all the century and to quicken repeated struggles of the French people for moral and social progress—these are the essential facts to be associated with the date 1820." Another circular relates to the teaching of contemporary history. *Professeurs d'histoire* are not bound to confine themselves strictly within the limits laid down in 1902; after having reviewed the internal history of the various European States, they may add a short lesson on European politics since 1871, but they must not attempt to expound the complex diplomacy of the period, nor relate the still unwritten history of the war 1914-18; whilst of the Peace of Versailles it was enough to consider the effects in connexion with geography. We observe that in the Bavarian Landtag Herr Hilpert (Middle Party) has been proposing that a copy of the Peace Treaty should be handed to every child leaving the elementary school; so that Nationalism may be kept alive—we assume, by means of hate. In the same number of the *Bulletin administratif*, a decree fixes improved salaries for the technical and administrative staff of the Direction des recherches scientifiques et industrielles et des inventions. An assistant director is to receive 22,000 francs; *chefs de service*, from 14,000 to 18,000 francs, according to class; and *chefs de section*, from 11,000 to 14,000 francs. The necessity of increased payment for university teachers and scientific investigators is growing urgent in many lands; albeit, that such men are not likely to "down" telescopes or let crucibles grow cold.

THE INCORPORATED LONDON ACADEMY OF MUSIC.

Training Course for Teachers in Elocution and Dramatic Art.

CENTRAL ACADEMY,

22 Princes Street, Cavendish Square, W. 1.

The Training Course extends over one year, and consists of three terms, each lasting ten weeks. Examinations are held at the end of every term.

FEES: £10. 10s. a Term, payable in advance.

The Summer Term begins Monday, May 3rd, and closes Saturday, July 10th.

GERMANY.

The *Putsch*, or Bogus Revolution (how Heine would have jeered at it!), the General Strike, the French advance —on these lively themes we may not expatiate. Here a pedagogic journal delayed its appearance, there an educational conference could not be held. But the general situation, so far as our business is affected, remains unchanged. The establishment of a *Grundschule*, or basic elementary school, having a four years' course and designed for all children, is the chief immediate object pursued and forms the subject of *Das erste Reichsschulgesetz*, or first Imperial School Law; of which the text has now been published. The New Constitution, be it observed, gives to the *Reich* a large competence in education, which should prove henceforth a unifying force in Germany, counteractive of particularist tendencies. The training of teachers, hitherto a local; has become an Imperial concern.

The academies of Berlin, Göttingen, Heidelberg, Leipzig, and München have petitioned the National Assembly to provide a sum of at least three million marks for the promotion of science and culture. The sum would be applied to the purchase of foreign scientific journals, and to the publication of important German scientific monographs. Still more urgent than these objects, as it is pointed out, is the continuation of vast enterprises which must fail without State aid—the German Dictionary of the Brothers Grimm, the "Thesaurus linguae latinae," and the great Septuagint undertaking. English academies and scholars should find means of assisting the continuance of the "Thesaurus," in particular. It were ill that learning should suffer from the shafts of war.

UNITED STATES.

Anzacs, waacs, wrens—we like what is named, but not the names, and once more we protest against the fashioning of monstrous words from initials. In France the abuse is surviving the war, and *instituteurs cégestistes* are teachers desirous of joining the C.G.T., or Confédération Générale du Travail. America, if the *English Journal* (IX, 2) represents it, seems disposed to do a little weeding and spraying in the garden of English, directing her attention not only

(Continued on page 286.)

A MESSAGE TO

VIOLIN LOVERS.

We have the finest stock of **New Violins** and many **Old Violins**, and sell them at their actual tone value, regardless of maker, history, and label.

Amateurs and professionals looking for a good-toned, well-made violin, should keep in touch with us until suited. Fine reproductions of famous makers—Stradivarius, Guarnerius, Maggini, Vuillaume—are continually provided by us.

We would welcome your inquiries, and request that our ever-changing lists of **Old Violins** and **Violin Music** may be sent to you periodically.

LECTURE RECITALS by **Mr. ADRIAN HARLEY**

1920, "The Tempest," "Hamlet," "Julius Caesar," &c.

Miss F. H. BURROWS, of Ancaster House, Bexhill, writes:

"We very much enjoyed Mr. Adrian Harley's Lecture Recital on "Twelfth Night." It was a great help to our Cambridge Senior candidates, and much appreciated by the whole school; even the little girls of 12 years old understanding and enjoying it."

THE HEALTHY LIFE

seeks to give expression to ideas which hold in them the promise of a sweeter and cleaner life for all. Which is one reason why its circle of readers is continually growing.

Send 7d. for the current Number to "The Healthy Life" Book Shop, 41 Margaret Street, London, W.1. The organization of the Book Shop is at your service. Any book will be quickly dispatched to your order.

to war products, but also to other growths. A writer in the *Journal* fails at some "Stunts in Language." The absurd *suffragette* has given birth to *officerette*, *chauffrette*, and *slackerette*. The disease *appendicitis* is responsible for *golfitis* and (the to us obscure complaint) *flivveritis*. At Washington a school which prepares for civil service examinations calls itself "The Drillery"; whilst a newspaper at Minneapolis has complained that the local baseball team is "on the skiddy"—surely an inelegant form of decline. To *travelogues* have been added *buzzologues* and *chatologues*; the war popularized the German *Fest* (e.g. *Ananiasfest* and *gossipfest*); and, as in England, witlings made play with the Russian *-ski*. Business English is also attacked by the American journal; this, for example: "Yours of the 5th instant at hand; in reply to same, beg to state. . . ." Merchants in the United States are themselves asking that schools should teach correctness of speech, and should give the pupil a larger vocabulary. We long ago urged English traders to double their profits and halve the tale of their lawsuits by writing English; they may soon have to compete with the Americans, not only in supplying the markets of the world, but also in the graces of commercial style.

A noteworthy mark of progress in the United States is the increasing attention that the universities are giving to education. To Harvard in 1891 far-seeing President Eliot called Prof. Hanus to lecture on the History and Art of Education. Courses on these subjects were then organized by a Division of the Faculty of Arts and Sciences. Now there is being established a well endowed Graduate School of Education with a separate Faculty which will recommend for the degrees of Master and Doctor. Yale, too, is developing a strong Graduate Department of Education, and has appointed a Professor of School Administration. From Chicago it is reported that "City superintendents, principals, and supervisors are returning to the university in growing numbers each year to work for higher degrees" (*School Review*, xxviii, 3). In order to meet their demands the University of Chicago has made new arrangements for the intensive study of educational problems, and students will be encouraged to investigate such matters as School Surveys, School Buildings and Equipment, Financial Administration, as well as more abstract questions. Chicago offers a course on "The Improvement of Teaching through the Use of Tests," and last year the University of Indiana held an important Conference on Edu-

cational Measurements. Indiana has been showing how mental tests can be employed to assist the selection of clerical helpers in factories. We ask that English universities should either discredit the Tests or do what Chicago and Indiana do—teach the use of them. Yet something, we know, has been achieved.
